## Glossary of Terms and Qualifiers

Work Order: 17-03-2252

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

**To:** Virendra Patel; Erick Ovalle  
**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/30/17. They were assigned to Work Order 17-03-2252.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Sample Summary

Client: Haley & Aldrich, Inc.	Work Order: 17-03-2252
3187 Red Hill Avenue, Suite 155	Project Name: UC Riverside North District / 128685-006 2.0
Costa Mesa, CA 92626-3453	PO Number: 2015-18-EurofinsCalscience
	Date/Time Received: 03/30/17 12:55
	Number of Containers: 101

Attn: Colleen Canfield

## Glossary of Terms and Qualifiers

Work Order: 17-03-2252

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Revised COC received from Matt Rathel (H&A) on 04/17/2017 at 13:10pm.

## Virendra Patel

---

**From:** Raithel, Mathew <MRaithel@haleyaldrich.com>  
**Sent:** Wednesday, April 05, 2017 1:33 PM  
**To:** Virendra Patel; Erick Ovalle  
**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/31/17. They were assigned to Work Order 17-03-2356.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Sample Analysis Summary Report

Work Order: 17-03-2356

Page 1 of 1

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 6010B	EPA 3010A Total	935	ICP 7300	1
EPA 6010B	EPA 3050B	935	ICP 7300	1
EPA 8081A	EPA 3545	669	GC 41	1
EPA 8081A	EPA 3510C	669	GC 44	1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## Virendra Patel

**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

**Notes and Abbreviations**

EPA, 2011 - Exposure Factors Handbook. EPA/600/R-10/030. October, 2011.  
 EPA, 2014 - Human Health Evaluation Manual, Supplemental Guidance: Update of Standard Default Exposure Factors. OSWER 9200.1-120. February 6, 2014.  
 DTSC, 2014 - HHRA Note Number 1 - Default HHRA Exposure Parameter, 30 September 2014  
 Values are based on time-weighted average of child, adolescent, and adult exposure values, calculated as follows:  
 EF = (child EF x child ED) + (adolescent EF x adolescent ED) + (adult EF x adult ED) / total scenario ED  
 IFSadj = (child ED x child IR / child BW) + (adolescent ED x adolescent IR / adolescent BW) + (adult ED x adult IR / adult BW)  
 DFSadj = (child ED x child SA x child AF / child BW) + (adolescent ED x adolescent SA x adolescent AF / adolescent BW) + (adult ED x adult SA x adult AF / adult BW)  
 ET = (child ET x child ED) + (adolescent ET x adolescent ED) + (adult ET x adult ED) / total scenario ED

**EQUATIONS:**

$EPC_{[PARTICULATE]} = EPC_{[SOIL]} \times PARTICULATE_{[AIR]} \times 1E-06 \text{ [kg/mg]}$

where:  
 $PARTICULATE_{[AIR]} = (1/PEF \times 1E+09 \text{ ug/kg}) \text{ or Measured/Modelled}$   
 and:  
 $PEF \text{ (m}^3/\text{kg)} = Q/C \times [(3600 \text{ s/hr)} / ((0.036 \times (1-V) \times (U_m/U_t)^3 \times F(x)))]$

PARAMETER/DEFINITION	UNITS	DEFAULT	Source
PARTICULATE <sub>[Air]</sub> / Particulate concentration in air	ug/m <sup>3</sup>	0.74	Calculated or measured
Measured or modeled PARTICULATE <sub>[Air]</sub>	ug/m <sup>3</sup>		Measured value
PEF / Particulate emission factor	m <sup>3</sup> /kg		Guidance value
PEF / Particulate emission factor	m <sup>3</sup> /kg	1.36E+09	Calculated here
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m <sup>2</sup> -s per kg/m <sup>3</sup>	93.77	Calculated / USEPA, 2014 [a]
V / Fraction of vegetative cover	unitless	0.5	Site-specific, estimated
U <sub>m</sub> / mean annual windspeed	m/s	4.69	Site-specific / USEPA, 2014
U <sub>t</sub> / equivalent threshold value of wind speed at 7 m	m/s	11.32	USEPA, 2014
F(x) / function dependant on U <sub>r</sub> /U <sub>t</sub> derived using Cowherd et al. (1985)	unitless	1.94E-01	Calculated / USEPA, 2014

USEPA, 2014. Regional Screening Levels.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL..... National Priority List  
Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

### ***Federal Delisted NPL site list***

Delisted NPL..... National Priority List Deletions

### ***Federal CERCLIS list***

FEDERAL FACILITY..... Federal Facility Site Information listing  
SEMS..... Superfund Enterprise Management System

### ***Federal RCRA generators list***

RCRA-SQG..... RCRA - Small Quantity Generators  
RCRA-CESQG..... RCRA - Conditionally Exempt Small Quantity Generator

### ***Federal institutional controls / engineering controls registries***

LUCIS..... Land Use Control Information System  
US ENG CONTROLS..... Engineering Controls Sites List  
US INST CONTROL..... Sites with Institutional Controls

### ***Federal ERNS list***

ERNS..... Emergency Response Notification System

### ***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF..... Solid Waste Information System

### ***State and tribal leaking storage tank lists***

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

## EXECUTIVE SUMMARY

### ***State and tribal registered storage tank lists***

FEMA UST..... Underground Storage Tank Listing  
AST..... Aboveground Petroleum Storage Tank Facilities  
INDIAN UST..... Underground Storage Tanks on Indian Land

### ***State and tribal voluntary cleanup sites***

INDIAN VCP..... Voluntary Cleanup Priority Listing  
VCP..... Voluntary Cleanup Program Properties

### ***State and tribal Brownfields sites***

BROWNFIELDS..... Considered Brownfields Sites Listing

### **ADDITIONAL ENVIRONMENTAL RECORDS**

EDR MGP..... EDR Proprietary Manufactured Gas Plants

# EXECUTIVE SUMMARY

## EDR RECOVERED GOVERNMENT ARCHIVES

### ***Exclusive Recovered Govt. Archives***

RGA LF..... Recovered Government Archive Solid Waste Facilities List

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<b><i>UNIVERSITY OF CALIFO</i></b>	<b><i>900 UNIVERSITY AVENU</i></b>	<b><i>W 0 - 1/8 (0.043 mi.)</i></b>	<b><i>20</i></b>	<b><i>16</i></b>

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1

## EXECUTIVE SUMMARY

CORRACTS site within approximately 1 mile of the target property.

<b>UNIVERSITY OF CALIFO</b>	<b>900 UNIVERSITY AVENU</b>	<b>W 0 - 1/8 (0.043 mi.)</b>	<b>20</b>	<b>16</b>

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>UNIVERSITY OF CALIFO</b>	<b>900 UNIVERSITY AVENU</b>	<b>W 0 - 1/8 (0.043 mi.)</b>	<b>20</b>	<b>16</b>

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

### ***State- and tribal - equivalent NPL***

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

## EXECUTIVE SUMMARY

Status: Certified O&M - Land Use Restrictions Only  
Facility Id: 33890001

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

### **State and tribal leaking storage tank lists**

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 17 LUST sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **Local Lists of Registered Storage Tanks**

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### **Other Ascertainable Records**

**FINDS:** The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/23/2017 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

**CA BOND EXP. PLAN:** Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

A review of the CA BOND EXP. PLAN list, as provided by EDR, and dated 01/01/1989 has revealed that there is 1 CA BOND EXP. PLAN site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>UNIVERSITY OF CALIFO</b>	<b>1060 PENNSYLVANIA AV</b>	<b>SW 1/2 - 1 (0.942 mi.)</b>	<b>45</b>	<b>134</b>

**HIST CORTESE:** The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 7 HIST CORTESE sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HELLER WILLIAM B	783 BLAINE ST	NW 0 - 1/8 (0.018 mi.)	D14	11

## EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

### EDR RECOVERED GOVERNMENT ARCHIVES

#### ***Exclusive Recovered Govt. Archives***

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 9 RGA LUST sites within approximately 0.001 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 55197

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 34643

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Case Worker: YR  
RB Case Number: 083303453T  
Local Agency: RIVERSIDE COUNTY LOP  
File Location: Local Agency Warehouse  
Local Case Number: 9914834  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History:

The station currently maintains five double-walled, fiberglass gasoline underground storage tanks (USTs). There are two 8,000-gallon capacity tanks, one 12,000-gallon capacity tank, one 10,000-gallon capacity tank, and one 6,000-gallon capacity tank. Several phases of investigations and remediation have been conducted at the Site since October 1998. In October 1998, compliance soil sampling (D1 through D8) was performed at the Site during piping upgrades (Kleinfelder, 1998). Hydrocarbon-affected soil was encountered adjacent to the western (D7 and D8) and east-central (D3) dispenser islands. In November 1999 to January 2000, five soil borings (B-1 through B-5) were drilled at the Site to total depths ranging between 65 feet below ground surface (bgs) and 85 feet bgs (Kleinfelder, 2000). Benzene was detected at concentrations above the laboratory reporting limit in soil samples collected from borings B-1, B-3 and B-4. Methyl tertiarybutyl ether (MtBE) was detected at concentrations above the laboratory reporting limit in soil samples collected from borings B-1, B-3, B-4, and B-5, located in the area surrounding the western-most dispenser island and near the east-central dispenser island. Fuel oxygenates, including diisopropyl ether (DIPE), ethyl tertiary-butyl ether (EtBE), tertiary-amyl methyl ether (tAME), and tertiary-butyl alcohol (tBA) were not detected above laboratory reporting limits in soil samples collected from the borings. In June 2001, one groundwater monitoring well (MW-4), three SVE wells (SVE-1 [B-7], SVE-2 [B-6], and SVE-3 [B-8]), and three soil borings (B-9, B-10, and B-11), were completed at the Site (Kleinfelder, 2001). Soil borings and SVE wells were drilled to total depths ranging from 95 feet bgs to 195 feet bgs. Total petroleum hydrocarbons as gasoline (TPH-g) was reported at a maximum concentration of 17 milligrams per kilogram (mg/kg) in a sample from MW-4 at 20 feet bgs. Benzene was reported in one soil sample, collected from MW-4 at 70 feet bgs, at a concentration of 26 micrograms per kilogram ("g/kg). MtBE was reported above the laboratory reporting limit in soil samples collected from borings SVE-1, SVE-3, B-9, and MW-4, with a maximum concentration of 820 "g/kg (MW-4 at 70 feet bgs). Fuel oxygenates DIPE, EtBE, tAME, and tBA were not detected above laboratory reporting limits in the soil samples analyzed. From May to July 2002, Kleinfelder supervised the completion of one SVE well (SVE-4), two groundwater monitoring wells (MW-1 and MW-2), and one soil boring (B-13) (Kleinfelder, 2002b). The soil boring and wells were drilled to total depths ranging from 150 feet bgs to 197 feet bgs. The maximum TPH-g concentration was 12,000 mg/kg in the sample collected from boring SVE-4 at 10 feet bgs. Benzene was detected in only one soil sample, SVE-4 at 15 feet bgs, at a concentration of 540 "g/kg. MtBE was reported in soil samples collected from borings SVE-4, MW-1, MW-2, and B-13, with a maximum concentration of 330 mg/kg (SVE-4 at 50 feet bgs). In April 2002, Kleinfelder performed a soil remediation feasibility evaluation for the Site (Kleinfelder, 2002a). For this evaluation, the primary constituents of concern at the Site were identified as benzene and MtBE. Hydrocarbon-affected soil was located in two areas: the vicinity of the western dispenser island (Area

MAP FINDINGS

**MOBIL #18-402 (Continued)**

**S100275475**

One); and the vicinity of the east-central dispenser island (Area Two). It was estimated that Area One had approximately 4,187 cubic yards (yd<sup>3</sup>) of soil containing hydrocarbons. Based on the average TPH-g concentrations, it was estimated that soil within Area One contained approximately 19,000 pounds (lbs) of hydrocarbons, of which MtBE represented an estimated 19 lbs, and benzene represented an estimated 4 lbs. It was estimated that Area Two had approximately 1,832 yd<sup>3</sup> of hydrocarbon-affected soil. Based on the average TPH-g concentrations, it was estimated that soil within Area Two contained approximately 430 lbs of hydrocarbons, of which MtBE represented an estimated 0.2 lbs. The mass of benzene in the soil could not be calculated since benzene concentrations in soil samples collected in Area Two have historically been below laboratory reporting limits. In July 2002, Kleinfelder began groundwater monitoring and sampling from three on-Site groundwater monitoring wells (MW-1, MW-2, and MW-4). Following a decline in hydrocarbon groundwater concentrations during Fourth Quarter 2003, Kleinfelder proposed that groundwater monitoring frequency be reduced from quarterly to semiannually (Kleinfelder, 2004). In a letter dated February 26, 2004, RCDEH approved the semi-annual groundwater monitoring schedule (RCDEH, 2004). Concentrations of dissolved-phase TPH-g and benzene have been below laboratory reporting limits since January 2002. Dissolved-phase MtBE was last reported in October 2007 at a concentration of 0.69 J (J = estimated value) micrograms per liter ("g/L) in a sample collected from MW-2 (Kleinfelder, 2010). On August 2002, Kleinfelder performed SVE feasibility testing at the Site (Kleinfelder, 2002c). Based on the results of SVE step testing, performed as part of the feasibility testing, high vapor flow appeared to be attainable at the Site with relatively low vacuum and an SVE radius of influence (ROI) for the Site was approximately 65 feet. Based on results of the feasibility testing, Kleinfelder proposed that SVE be performed on well SVE-4. It was proposed that a SVE system operate until vapor concentrations display asymptotic conditions (diminishing returns), after which the SVE system effectiveness would be evaluated by pulse testing the system for vapor rebound concentrations. Additional details of the soil remediation feasibility study and the feasibility testing are described in Kleinfelders Corrective Action Plan, dated September 30, 2002 (Kleinfelder, 2002c), and Addendum to Corrective Action Plan, dated January 15, 2003 (Kleinfelder, 2003). A SVE system was installed at the Site and began operation on October 14, 2003. The SVE system was a VR Systems Internal Combustion Engine (ICE) that extracted soil vapors from vapor extraction well SVE-4. By June 1, 2005, the system had extracted and treated approximately 10,086 lbs of hydrocarbons, and influent vapor concentrations displayed asymptotic reductions in hydrocarbon concentrations (diminishing returns). To confirm asymptotic levels had been achieved, Kleinfelder requested that pulsing of the system, for one month on and one month off cycles, be initiated and continued for a four month period, as part of a vapor rebound test (Kleinfelder, 2005a). The RCDEH approved the request to begin pulsing of the SVE system (RCDEH, 2005). A summary of system operation data and a request to cease remediation at the Site was presented in Kleinfelders Soil Vapor Extraction Rebound Test Report and Site Closure Request (Kleinfelder, 2005b). The RCDEH approved the request to cease SVE operations in February 2006 (RCDEH, 2006). In March and April 2006, Kleinfelder supervised the advancement of four confirmation soil borings (CB-1 through CB-4) at the Site as part of a post remediation assessment for support of

MAP FINDINGS

**S100275475**

case closure (Kleinfelder, 2006). Borings CB-1 through CB-3 were drilled and sampled to 140 feet bgs, and boring CB-4 was advanced to 126.5 feet bgs. Boring CB-4 could not be advanced deeper than 126.5 feet bgs due to refusal at that depth. Concentrations of TPH-g were reported in three soil borings and ranged from 0.095 J mg/kg (CB-3 at 10 feet bgs) to 1,200 mg/kg (CB-4 at 25 feet bgs). Benzene was reported in one soil sample (CB-1 at 90 feet bgs) at a concentration of 0.55 J "g/kg. Toluene was reported at concentrations ranging from 0.61 J "g/kg to 81 "g/kg. In March and April 2006, Kleinfelder supervised the advancement of four confirmation soil borings (CB-1 through CB-4) at the Site as part of a post remediation assessment for support of case closure (Kleinfelder, 2006). Borings CB-1 through CB-3 were drilled and sampled to 140 feet bgs, and boring CB-4 was advanced to 126.5 feet bgs. Boring CB-4 could not be advanced deeper than 126.5 feet bgs due to refusal at that depth. Concentrations of TPH-g were reported in three soil borings and ranged from 0.095 J mg/kg (CB-3 at 10 feet bgs) to 1,200 mg/kg (CB-4 at 25 feet bgs). Benzene was reported in one soil sample (CB-1 at 90 feet bgs) at a concentration of 0.55 J "g/kg. Toluene was reported at concentrations ranging from 0.61 J "g/kg to 81 "g/kg. In March and April 2006, Kleinfelder supervised the advancement of four confirmation soil borings (CB-1 through CB-4) at the Site as part of a post remediation assessment for support of case closure (Kleinfelder, 2006). Borings CB-1 through CB-3 were drilled and sampled to 140 feet bgs, and boring CB-4 was advanced to 126.5 feet bgs. Boring CB-4 could not be advanced deeper than 126.5 feet bgs due to refusal at that depth. Concentrations of TPH-g were reported in three soil borings and ranged from 0.095 J mg/kg (CB-3 at 10 feet bgs) to 1,200 mg/kg (CB-4 at 25 feet bgs). benzene was reported in one soil sample (CB-1 at 90 feet bgs) at a concentration of 0.55 J "g/kg. Toluene was reported at concentrations ranging from 0.61 J "g/kg to 81 "g/kg. Ethylbenzene was reported at concentrations ranging from 0.78 J "g/kg to 3,000 "g/kg, and total xylenes were reported at concentrations ranging from 0.56 J "g/kg to 103,000 B "g/kg (B = analyte was detected in an associated method blank). The reported concentrations of toluene, ethylbenzene, and total xylenes were predominantly located in samples collected from CB-4, drilled in the vicinity of the eastern dispenser island. Concentrations of MtBE were reported to range from 1.0 J "g/kg to 33 "g/kg, with the maximum concentration of MtBE reported in the sample collected from CB-3 at 75 feet bgs. On February 8, 2007, Kleinfelder met with the RCDEH to discuss case closure. The attendees present were Ms. Sharon Boltinghouse from RCDEH, and Mssrs. Brad McCardell, Jeremy Whitcomb, and Hiram Garcia from Kleinfelder. The proposed scope of work as agreed to at the meeting included drilling three additional soil confirmation borings (CB-5, CB-6, and CB-7) to assess the effectiveness of SVE near previous borings CB-2, CB-3, and CB-4 in support of case closure with the RCDEH. Each proposed soil confirmation boring was to be advanced to approximately 40 feet bgs. The RCDEH prepared a letter dated March 1, 2007 confirming the scope of work (RCDEH, 2007). The details of this investigation are presented below. In March 2007, three soil confirmation borings (CB-5, CB-6, and CB-7) were advanced to 40 feet bgs to assess the effectiveness of SVE near previous borings CB-2, CB-3, and CB-4 in support of case closure with the RCDEH (Kleinfelder, 2007a). Soil encountered during drilling generally consisted of silty sand with intermittent lenses of well-graded sand to the total depth explored (40 feet bgs). Soil samples collected from boring CB-7, near the

MAP FINDINGS

**MOBIL #18-402 (Continued)**

**S100275475**

eastern dispenser island, were reported to contain detectable concentrations of petroleum hydrocarbons and oxygenates. TPH-g concentrations were reported in samples collected from boring CB-7, ranging from 2.3 mg/kg (30 feet bgs) to 740 mg/kg (25 feet bgs). Benzene and toluene concentrations were below laboratory reporting limits in soil samples collected from borings CB-5, CB-6, and CB-7. Ethylbenzene was reported at concentrations ranging from 280 J "g/kg to 1,800 "g/kg, and total xylenes were reported at concentrations ranging from 19,000 "g/kg to 99,000 "g/kg. Concentrations of ethylbenzene and total xylenes were reported in samples collected from CB-7 at depths of 20 and 25 feet bgs in the vicinity of the eastern dispenser island. MtBE concentrations were below laboratory reporting limits in the soil samples collected from borings CB-5, CB-6, and CB-7. In August 2007, two SVE wells (SVE-5 and SVE-6) were installed at depths of 30 and 35 feet bgs, respectively (Kleinfelder, 2007b). TPH-g was detected in soil samples collected from boring SVE-6, at a maximum concentration of 1,200 mg/kg (25 feet bgs). TPH-g was not detected in soil samples collected from boring SVE-5. Benzene, toluene, MtBE, DIPE, EtBE, tAME, and tBA were not detected above laboratory reporting limits in soil samples collected from borings SVE-5 and SVE-6. Ethylbenzene and total xylenes were detected in soil samples collected from boring SVE-6 at maximum concentrations of 510 "g/kg (25 feet bgs) and 30,000 "g/kg (25 feet bgs), respectively. Ethylbenzene and total xylenes were not detected above laboratory reporting limits in soil samples collected from boring SVE-5. Between February 29, 2008 and May 22, 2009, SVE operations were initiated on SVE-5 and SVE-6 for the purpose of primarily recovering trimethylbenzene concentrations (detected in soil confirmation boring CB-7). An estimated 270 pounds of VOCs as hexane, an estimated 1,292 pounds of VOC based on FID readings, an estimated 15.1 pounds of 1,2,4-TMB, and an estimated 9.8 pounds of 1,3,5-TMB were extracted from the subsurface. Due to low mass recovery rates (less than one pound per day) and the SCAQMD permit moratorium, the system was shut down on May 22, 2009. During the three SVE events, the system operated for a total of 21,600 hours and an estimated 10,407 pounds VOCF, 10,538 pounds of VOCs as hexane, 3.2 pounds benzene, 404 pounds toluene, 113 pounds ethylbenzene, 744 pounds xylenes, 29.2 pounds 1,2,4-TMB, and 17.9 pounds 1,3,4-TMB were removed from the subsurface. Vapor concentrations were reduced from 10,500 to 66 ppmV for VOCs as hexane, from 990 to 0.09 ppmV for toluene, from 570 to 1.2 ppmV for xylenes, from 120 to 0.012 ppmV for ethylbenzene, from 20 ppmV to non-detect for MTBE, and from 31 to 2.7 ppmV for 1,2,4-TMB. Other VOCs were less than 20 ppm at the beginning of operations and decreased to below 2 ppm prior to shutdown. On May 20, 2010, two confirmation borings (CB-8 and CB-9) were advanced in the vicinity of well SVE-6 to assess the effectiveness of remedial activities at the Site. Based upon laboratory analytical results of soil samples collected from boring SVE-6 in 2007 and CB-8 and CB-9 in 2010, constituent concentrations in soil near SVE-6 appear to have been reduced by SVE operations. Maximum TPH-g concentrations in soil have been reduced from 1,200 mg/kg (SVE-6 at 25 feet bgs) to 47 mg/kg (CB-9 at 30 feet bgs). BTEX constituents and MtBE were not detected above laboratory reporting limits in soil samples collected from borings CB-8 and CB-9. Groundwater monitoring and sampling commenced in July 2002, utilizing three on-site groundwater monitoring wells (MW-1, MW-2, and MW-4). Following a decline in groundwater hydrocarbon concentrations the RCDEH approved a reduced, semi-annual,

groundwater monitoring schedule. Concentrations of dissolved-phase TPH-g and benzene have been below laboratory reporting limits since January 2002. Dissolved-phase MTBE was last reported in December 2007 in a sample collected from MW-2 at an estimated concentration of 0.69 J a%g/L. During First Quarter 2010, TPH-g, benzene, toluene, ethylbenzene, and fuel oxygenates are no longer present in samples above laboratory reporting limits. A low concentration of xylenes (1.3 a%g/L) was reported in the February 3, 2010 groundwater sample collected from monitoring well MW-4. RWQCB and RCDEH concur with closure. 01/13/2011 NFA/closure letter issued by RCDEH.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Preliminary Assessment Report  
Completed Date: 06/01/1984  
Comments: Preliminary Assessment Done: Agricultural & scientific research operations. Three pits and one landfill. Pits were filled-in. 15,000 cubic feet of materials are buried in the landfill. Currently, wastes are packed with vermiculite in 55-gallon drums, stored in paved/fenced/covered storage area, and hauled under manifest to a Class I disposal area (Hauler: Findly Chemical Disposal Co). No mark fence around landfill. Pits were active from 1959 to 1969. Preliminary Assessment submitted to EPA.

Completed Date: 12/30/1987  
Comments: Not reported

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Preliminary Assessment Report  
Completed Date: 06/01/1984  
Comments: Preliminary Assessment Done: Agricultural & scientific research operations. Three pits and one landfill. Pits were filled-in. 15,000 cubic feet of materials are buried in the landfill. Currently, wastes are packed with vermiculite in 55-gallon drums, stored in paved/fenced/covered storage area, and hauled under manifest to a Class I disposal area (Hauler: Findly Chemical Disposal Co). No mark fence around landfill. Pits were active from 1959 to 1969. Preliminary Assessment submitted to EPA.

Background Info: The site consists of seven pits located in the Agricultural Operations yard of the University of California,Riverside campus. A wide diversity of organic chemicals including organichlorine pesticides, chlorinated herbicides, solvents, hydrocarbons, and polychlorinated biphenyls (PCBs) have been identified in the pits. The pits were used from the mid-1950s, to the late 1960s, for the disposal of agricultural wastes and containers which presumably contained residual waste generated during research into various experimental pesticides. The disposal pits are not lined and there is potential for contamination of groundwater which is used for domestic supply. The pits are covered and there is little potential direct exposure.  
The first stage of a two stage RI/FS has been completed. The first stage identified the types of soil contamination and location of the pits.

**CA BOND EXP. PLAN:**

Reponsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN  
Project Revenue Source Company: Not reported  
Project Revenue Source Addr: Not reported  
Project Revenue Source City,St,Zip: Not reported  
Project Revenue Source Desc: The University of California Riverside Board of Regents and the Department are negotiating an enforceable agreement that will require the Regents to continue to conduct RI/FS activities. DHS has budgeted \$50,000 for related direct costs and DHS will recover 100 percent of those costs plus staff costs and overhead related to the project. The Regents will pay all costs associated with site investigation and remediation.  
Site Description: The site is adjacent to the University of California Riverside research facility. Pesticides and other hazardous substances from research activities were disposed of in pits on the site.  
Hazardous Waste Desc: Empty chemical containers, pesticides, miscellaneous experimental chemicals and lab stock chemicals were disposed of in unlined pits. The wastes identified in previous investigations include pesticides, chlorinated herbicides, solvents and polychlorinated biphenyls (PCBs).  
Threat To Public Health & Env: The variety of substances disposed of may present problems related to incompatibility of wastes and breakdown of constituents to more hazardous materials. The disposal sites are neither lined nor monitored. There is potential for contamination of ground water which is used for domestic supply. The pits are covered and there is little potential for direct exposure.  
Site Activity Status: The University of California completed remedial studies to identify soil contamination in April, 1988. Additional studies of soil and ground water are continuing.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 12/22/2017
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 12/22/2017
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 01/05/2018
Number of Days to Update: 92	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346
Date Made Active in Reports: 01/12/2018	Last EDR Contact: 01/17/2018
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346
Date Made Active in Reports: 01/12/2018	Last EDR Contact: 01/17/2018
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/13/2017	Source: EPA
Date Data Arrived at EDR: 09/26/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/22/2017	Source: Department of the Navy
Date Data Arrived at EDR: 06/13/2017	Telephone: 843-820-7326
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/08/2017
Number of Days to Update: 94	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 44	Next Scheduled EDR Contact: 03/12/2018
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695

Next Scheduled EDR Contact: 02/12/2018

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 10/30/2017

Date Data Arrived at EDR: 10/31/2017

Date Made Active in Reports: 12/15/2017

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 08/21/2017  
Date Data Arrived at EDR: 09/20/2017

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/13/2017  
Date Data Arrived at EDR: 09/06/2017  
Date Made Active in Reports: 10/06/2017

Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 12/04/2017	Source: DTSC and SWRCB
Date Data Arrived at EDR: 12/05/2017	Telephone: 916-323-3400

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch

	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895

	Data Release Frequency: N/A

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995  
Date Data Arrived at EDR: 07/03/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Number of Days to Update: 52	Next Scheduled EDR Contact: 05/07/2018
	Data Release Frequency: Varies

## Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for solid waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

Date of Government Version: 11/14/2017	Source: California Integrated Waste Management Board
Date Data Arrived at EDR: 11/17/2017	Telephone: 916-341-6066
Date Made Active in Reports: 12/18/2017	Last EDR Contact: 11/09/2017
Number of Days to Update: 31	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2016	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 07/12/2017	Telephone: 916-255-1136
Date Made Active in Reports: 10/17/2017	Last EDR Contact: 01/08/2018
Number of Days to Update: 97	Next Scheduled EDR Contact: 04/23/2018
	Data Release Frequency: Annually

## ICE: ICE

Contains data pertaining to the Permitted Facilities with Inspections / Enforcements sites tracked in Envirositor.

Date of Government Version: 11/20/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 11/20/2017	Telephone: 877-786-9427

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/11/2017	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 11/14/2017	Telephone: 860-424-3375
Date Made Active in Reports: 12/18/2017	Last EDR Contact: 11/14/2017
Number of Days to Update: 34	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: No Update Planned

### NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

## **GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM**

### **TARGET PROPERTY ADDRESS**

AMERICAN CAMPUS PHASE 1A  
LINDEN ST  
RIVERSIDE, CA 92507

### **TARGET PROPERTY COORDINATES**

Latitude (North):	33.978292 - 33° 58' 41.85"
Longitude (West):	117.324589 - 117° 19' 28.52"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	470016.6
UTM Y (Meters):	3759602.2
Elevation:	1082 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5641312 RIVERSIDE EAST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06065C0727G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06065C0731G	FEMA FIRM Flood data
06065C0729G	FEMA FIRM Flood data
0602600020A	FEMA Q3 Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### *Site-Specific Hydrogeological Data\*:*

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

Era: Mesozoic  
System: Cretaceous  
Series: Cretaceous granitic rocks  
Code: Kg *(decoded above as Era, System & Series)*

#### **GEOLOGIC AGE IDENTIFICATION**

Category: Plutonic and Intrusive Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	9 inches	18 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1
3	18 inches	44 inches	indurated	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
4	44 inches	57 inches	cemented	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
5	57 inches	70 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**Soil Map ID: 2**

Soil Component Name: ARLINGTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	11 inches	24 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 6.1
3	24 inches	35 inches	cemented	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: Min:
4	35 inches	46 inches	coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 3

Soil Component Name: Terrace escarpments

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:  
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

### Soil Map ID: 4

Soil Component Name: HANFORD

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Dear Ms. Canfield:

Enclosed please find Citadel Environmental Services, Inc.'s Environmentally-Regulated Materials (ERMs) Survey Report for the above-referenced location.

The ERMs survey was conducted for Haley & Aldrich, Inc. in accordance with Citadel's Proposal 7076.1017.P, dated June 25, 2018 and a mutually agreed upon scope of work.

If after your review you have any questions or require additional information, please do not hesitate to telephone me at (818) 246-2707.

Sincerely,  
**CITADEL ENVIRONMENTAL SERVICES, INC.**

Jack Samuels, CAC, CDPH  
Associate Principal, Building Sciences

## **1.0 INTRODUCTION**

Citadel Environmental Services, Inc. (Citadel) was contracted by Haley & Aldrich, Inc. (Client) to conduct a Pre-Demolition Environmentally-Regulated Materials (ERMs) survey {i.e., asbestos-containing materials/asbestos-containing construction materials (ACMs/ACCMs) & lead-containing materials (LCMs)} of the Canyon Crest Family Student Housing Units and Support Buildings (Survey Area) located at the University of California, Riverside in Riverside, California (Project Site).

Citadel separated the housing units into four categories based on similar, homogenous, construction. The categories are as follows:

- Single Family Unit (SFU) Structures with Peaked Roofs – 69 Structures
- Single Family Unit (SFU) Structures with Flat Roofs – 19 Structures
- Rectangular Duplex Structures – 79 Structures
- Offset Duplex Structures – 12 Structures

Citadel performed full pre-demolition asbestos and lead screening surveys of 25% of each type of housing structure. In addition, Citadel performed walkthrough surveys of the remaining housing structures to confirm that the suspect asbestos-containing materials were the same (homogenous) throughout each type. In cases where different homogeneous materials were identified in the walkthrough structures, these materials were bulk sampled for asbestos.

Full pre-demolition surveys were performed in the following housing structures:

725/727 Grape Street (Duplex)  
766 Grape Street (SFU)  
813/815 Grape Street (Duplex)  
840/842 Grape Street (Duplex)  
860 Grape Street (SFU)  
873 Grape Street (SFU)  
3411/3413 Avocado Street (Duplex)  
3422/3424 Avocado Street (Duplex)  
3446 Avocado Street (SFU)  
3452 Avocado Street (SFU)  
3459/3461 Avocado Street (Duplex)  
3472/3474 Avocado Street (Duplex)  
3489/3491 Avocado Street (Duplex)  
810 Peach Street (SFU)  
848/850 Peach Street (Duplex)  
3401/3407 Kentucky Street (Duplex)  
3419 Kentucky Street (SFU)  
3434 Kentucky Street (SFU)  
3480/2488 Kentucky Street (Duplex)  
786 Blaine Alley (SFU)  
876/876 Blaine Alley (Duplex)  
890 Blaine Alley (SFU)  
801/803 Cherry Street (Duplex)

821/823 Cherry Street (Duplex)  
861 Cherry Street (SFU)  
3308 Utah Street (SFU)  
3315/3317 Utah Street (Duplex)  
3321/3323 Utah Street (Duplex)  
3341 Utah Street (SFU)  
3342/3344 Utah Street (Duplex)  
3348 Utah Street (SFU)  
3350 Utah Street (SFU)  
3367 Utah Street (SFU)  
3384 Utah Street (SFU)  
3408/3416 Florida Street (Duplex)  
3429 Florida Street (SFU)  
3475/3479 Florida Street (Duplex)  
3323/3325 Idaho Street (Duplex)  
3334 Idaho Street (SFU)  
3359/3361 Idaho Street (Duplex)  
3370 Idaho Street (SFU)  
3398 Idaho Street (SFU)  
811 Plum Street (SFU)  
822 Plum Street (SFU)  
849/851 Plum Street (Duplex)  
747/749 Linden Street (Duplex)

Citadel performed full pre-demolition asbestos and lead surveys of the vacant support buildings on the site. The following buildings were inspected.

- Community Center/Computer Lab (Duplex Building at 890/892 Plum Street)
- Laundry Building
- Maintenance & Grounds Shop (3458 Avocado Street)
- Parks & Recreation Restroom
- HDRS Facilities Warehouse
- Carpenter Shop (3358 Utah Street)

The following support buildings were occupied and were not included in the survey.

- HDRS Facilities Management (Duplex 3496/3498 Avocado Street)
- KUCR Campus Radio Station (Duplex 691/693 Linden Street)
- Child Development Center

The survey was conducted between July 23<sup>rd</sup> and August 30<sup>th</sup>, 2018 by Citadel representatives Joshua Hoover and Juan Magallon. Mr. Hoover is a California Department of Occupational Safety and Health (DOSH) Certified Site Surveillance Technician (CSST) (No. 14-5288), and California Department of Public Health Services (CDPH) Lead-Related Construction Sampling Technician (LRCST) (No. 26885). Mr. Magallon is a DOSH CSST (No. 15-5358), and CDPH LRCST (No. 26502). All work was performed under the general supervision of and this report was written by Jack Samuels. Mr. Samuels is a DOSH Certified Asbestos Consultant (CAC) (No. 92-0475), and CDPH Lead-Related Construction Inspector Assessor (LRCIA) (No. 5380). The report was reviewed by Mr. Kier DeLeo, CHMM. Project team certifications can be found in Appendix A.

## **2.0 SURVEY METHODOLOGIES**

### **FIELD METHODOLOGIES – ASBESTOS**

Citadel performed full pre-demolition asbestos surveys of 25% of each type of housing structure (the “25% units”). In addition, Citadel performed walkthrough surveys of the remaining housing structures (the “walkthrough units”) to confirm that the homogeneous materials were the same as those fully surveyed. Unique materials found in the walkthrough units were sampled for asbestos. Full pre-demolition asbestos surveys were also performed in the support structures.

Citadel began the field survey by visually inspecting the project area to categorize suspect ACMs/ACCMs to be impacted by the project. Suspect ACMs/ACCMs were categorized by homogeneous areas (HAs). HAs consist of groupings of materials that have uniform appearances, textures, and installation dates.

Demolition inspection techniques were utilized during the survey. Demolition inspection techniques included penetrating wall cavities and coring the floor to the floor joists. Access into the housing unit attic space was limited to a few locations because there were no ceiling access hatches and the attic could not be accessed from the roof vents on the side walls.

Following the walk through, representative bulk samples of suspect ACMs/ACCMs were then collected. As the samples were collected, the locations of the HAs and samples were marked on field sketches. Locations of visible debris, if observed, were also noted.

### **ACMs/ACCMs Condition Assessment**

Materials were assessed to be in good, *damaged*, or *significantly damaged* condition based on how their condition at the time of the survey related to the following:

- ❖ **Good Condition** - No or very limited visible damage or deterioration was observed.
- ❖ **Damaged Condition** - Crumbling, blistering, water damage, gouges, or other damage was observed over less than 25% of the materials (one-tenth if evenly distributed); or accumulation of suspect powder, dust or debris below the material was observed.
- ❖ **Significantly Damaged Condition** - Crumbling, blistering, water damage, gouges, or other damage was observed over greater than 25% of the material (one-tenth if evenly distributed); material is delaminating or showing adhesive failure; or accumulation of suspect powder, dust or debris below the material was observed.

## **FIELD METHODOLOGIES – LEAD CONTAINING MATERIALS (LCMS)**

Citadel performed pre-demolition lead screening surveys of 25% of each type of housing structure. Pre-demolition lead screening surveys were also performed in the support structures. In the walkthrough units, unique materials not found in the 25% units.

### **X-Ray Fluorescence (XRF SA) (SCREEN)**

A limited lead inspection/screening was conducted to test predominant surface paints/coatings on surface area components, such as walls, doors, floors, frames, etc. for lead-based paints and lead-containing paints. Citadel utilized X-Ray Fluorescence Spectrum Analysis (XRF-SA) to test suspect paints and coatings. Assays (tests) were taken from interior painted/coated surfaces as necessary.

The XRF irradiates the paint on a given surface causing the lead in the paint, if present, to emit a characteristic frequency of x-ray radiation. The intensity of this radiation is measured by the detector and related to the amount of lead in the paint. The type of XRF used in this survey was a Niton XLP-303A X-Ray Fluorescence Spectrum Analyzer. The XRF analyzer provides an in-the-field determination of suspect LBP without the need to collect substantial numbers of paint chip samples for subsequent laboratory analysis.

In order to obtain a reading, the XRF was placed with the face of the instrument flush against the surface to be tested. It was then held in place for the duration of the sample, which was determined by the instrument. At the conclusion of the sample time, the lead concentration was displayed on the device's readout screen. The values, expressed in milligrams per square centimeter (mg/cm<sup>2</sup>), are stored in the device and can be recalled by the inspector upon downloading into computer software. The Niton is sensitive to 0.01 milligrams per square centimeter (mg/cm<sup>2</sup>) of lead.

The instrument, equipped with a sealed radioactive source, was operated by certified personnel in accordance with manufacturer requirements and applicable regulations. The operator calibrated the XRF-SA pursuant to the manufacturer's specifications and regularly verified XRF-SA readings against pre-determined lead samples produced by the National Institute of Standards and Testing (NIST). These quality control measures produced a 95% confidence level that the XRF-SA readings accurately reflected the actual level of lead in the tested surfaces.

## **3.0 RESULTS**

### **ASBESTOS**

#### **Asbestos Definitions**

**Asbestos-Containing Materials (ACM):** The EPA's Asbestos NESHAPs and the South Coast Air Quality Management District (SCAQMD), the local air pollution control district, define an asbestos-containing material as any material that contains a concentration of asbestos of greater than one percent (>1.0%) by area as determined by PLM (Federal Register, Volume 59, No. 146, August 1, 1994, P. 38970-38971). NESHAPs and SCAQMD Rule 1403 further segregate asbestos-containing materials into *Regulated Asbestos-Containing Materials (RACM)*, *Category I Non-Friable Materials*, and *Category II Non-Friable Materials*, which are defined as follows:

- ❖ **Regulated Asbestos-Containing Materials (RACM)/Asbestos-Containing Materials (ACM):** Includes all friable asbestos materials, Category I/Class I Nonfriable ACM that have become friable or will become friable, and Category II/Class II Nonfriable ACM that have a high probability of being crumbled, pulverized, or reduced to powder by the forces expected to act on the materials in the course of renovation or demolition.
- ❖ **Category I Nonfriable ACM/Class I Nonfriable ACM:** Includes asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products that when dry can be crumbled, pulverized, or reduced to powder by hand pressure in the course of renovation and demolition activities.
- ❖ **Category II Nonfriable ACM/Class II Nonfriable ACM:** Includes all non-friable materials, excluding *Category I/Class I Nonfriable ACM* that when dry cannot be crumbled, pulverized, or reduced to powder by hand pressure.

**Asbestos-Containing Construction Materials (ACCM):** The California Department of Occupational Safety and Health (Cal/OSHA) further defines an asbestos-containing construction material (ACCM) as a material that contains greater than one-tenth of one percent (>0.1%) asbestos.

**Presumed Asbestos-Containing Material (PACM)** means thermal system insulation and surfacing material found in buildings, vessels, and vessel sections constructed no later than 1980 that are assumed to contain greater than one percent asbestos but have not been sampled or analyzed to verify or negate the presence of asbestos. PACM may also be used in this report to identify additional suspect ACM that was not sampled but should be assumed to be ACM.

### Asbestos Results

During the survey, a total of 1,894 asbestos bulk samples were collected. Where multiple layers were present, the laboratory analyzed each layer and their results reported. The bulk samples were submitted to the following laboratories for analysis by polarized light microscopy (PLM) for asbestos content using EPA 600/R-93/116 Method. The EPA method is a semi-quantitative procedure with a detection limit of one-tenth to one percent (0.10 – 1.0%) by area, dependent upon the material being analyzed. If indicated, select samples were submitted for more objective analysis following EPA 600/R-93/116 Method Point Count procedures (1,000 points). The Point Count procedure is used to increase the amount of sample viewed under PLM so that the results are statistically enhanced, resulting in a generally more accurate analysis.

**Note 1:** It was reported to Citadel that originally all of the housing units had flat roofs with composition roofing materials. There was a program to remove these roofs and replace them with the peaked roofs that are currently present. To save money at the end of the project, the removal of the flat roofs was suspended, and the peaked roofs were installed over the existing flat roofs. It was reported to Citadel that this condition is limited. During our survey, Citadel did not have access to the attic spaces either from inside the units or from the roof vents, so we were unable to confirm which buildings have this condition. During abatement and demolition, the buildings should be inspected to confirm if this condition exists. It should be noted that Citadel performed sampling of the housing units (single family and duplexes) where the flat roofs had not been covered with the peaked roofing system. The roof field membrane in all cases were negative for asbestos, however ACM mastics were present.

Table A.4 below summarizes the materials that were reported by the laboratory to not contain detectable quantities of asbestos **None Detected or ND** or contained less than 0.1% asbestos by the Point Count procedure:

The drawings with bulk sample locations can be found in Appendix **B**. A detailed summary of bulk samples collected may be found in Appendix **C**, Table 1.0 – *Bulk Sample Results*. Detailed information pertaining to the location of homogeneous asbestos-containing materials is presented in Appendix **D**, Table 2.0 – *Summary by Material*. LA Testing's bulk sample laboratory results may be found in Appendix **E**.

## LEAD-CONTAINING MATERIALS

### Lead Definitions

- ❖ **Lead Containing Paint (LCP)** - A lead-containing paint is a paint or coating that contains any detectable concentration of lead.
- ❖ **Lead Based Paint (LBP)** - The California Department of Public Health (CDPH) and the US Department of Housing and Urban Development (HUD) define Lead-Based Paint (LBP) as paint containing lead greater than or equal to 1.0 milligram per square centimeter ( $\geq 1.0$  mg/cm<sup>2</sup>) or greater than or equal to 0.5% by weight also expressed as 5,000 parts per million ( $\geq 5,000$  ppm).
- ❖ **Lead Containing Material (LCM)** - A lead-containing material may consist of identified lead-containing paint (LCP), lead-based paint (LBP), or other materials such as lead sheeting, ceramic tile glazing, etc., or presumed LCMS.
- ❖ **Presumed Lead-Based Paint (PLBP)** - Title 17, California Code of Regulations, Division 1, Chapter 8 defines as paint or surface coating affixed to a component in or on a structure constructed prior to January 1, 1978 as a presumed lead-based paint unless it has been tested and found to contain an amount of lead  $< 1.0$  mg/cm<sup>2</sup> or  $< 0.5\%$  by weight.

A total of 2,529 assays (tests) (excluding "Null" and "Calibration Readings"), using the XRF-SA were conducted during the survey. Of the 2,529 assays collected, 452 were found to contain LBP (i.e.,  $\geq 1.0$  mg/cm<sup>2</sup>).

XRF-SA results may be found in Appendix **F**, Table 3.0 – XRF-SA Results; Appendix **G**, Table 3.1 – Lead-Based Paint (LBP) XRF-SA results; and Appendix **H**, Table 3.2 – Lead-Containing Paint (LCP) results (i.e.,  $\geq 0.01$  mg/cm<sup>2</sup> and  $< 1.0$  mg/cm<sup>2</sup>).

Table B.1 below summarizes the materials identified and sampled to be **Lead-Based Paints (LBP)** (detectable quantities of lead in concentrations of  $\geq 5,000$  ppm or  $\geq 1.0$  mg/cm<sup>2</sup>) in the project area:

See Appendix **G** - Table 3.1 for complete list of LBP materials.

See Appendix **H** - Table 3.2 for a summary of materials identified and sampled to be **Lead-Containing Paints (LCP)** (detectable quantities of lead in concentrations of <5,000 ppm or  $\geq 0.01$  mg/cm<sup>2</sup> and <1.0 mg/cm<sup>2</sup>) in the project area.

## **4.0 CONCLUSIONS AND RECOMMENDATIONS**

### **ASBESTOS**

The results of the survey indicate that ACMs and PACMs are present in the housing structures and support structures.

Citadel performed full pre-demolition asbestos surveys of 25% of each type of housing structure. In addition, Citadel performed walkthrough surveys of the remaining housing structures to confirm that the homogeneous materials were the same, and if found, unique materials were sampled. Full pre-demolition asbestos surveys were also performed in the support structures.

Demolition inspection techniques were utilized during the survey. Demolition inspection techniques included penetrating wall cavities and coring the floor to the floor joists. Access into the housing unit attic space was limited to a few locations because there were no ceiling access hatches and the attic could not be accessed from the roof vents on the side walls.

It was reported to Citadel that all of the housing units originally had flat roofs with composition roofing materials. There was a program to remove these roofs and replace them with the peaked roofs that are currently present. To save money at the end of the project, the removal of the flat roofs was suspended and the peaked roofs were installed over the existing flat roofs. It was reported to Citadel that this condition is limited. During our survey, Citadel did not have access to the attic spaces either from inside the units or from the roof vents so we were unable to confirm which buildings have this condition. During abatement and demolition, the buildings should be inspected to confirm if this condition exists. It should be noted that Citadel performed sampling of the housing units with exposed flat roofs. The roof field membrane in all cases were negative for asbestos, however ACM mastics were identified.

If suspect materials are identified during demolition activities that were not specifically sampled, they should be assumed to be ACM until they can be sampled.

All asbestos removal operations shall be performed by a Cal/OSHA-DOSH-registered and California-licensed asbestos contractor. All disturbances of asbestos-containing materials, and/or abatement operations, should be performed under the surveillance of a third-party Cal/OSHA Certified Asbestos Consultant retained by the Client.

All disturbances of asbestos-containing materials, and/or abatement operations, must be performed in accordance with the Cal/OSHA requirements set forth in 8 CCR 1529. Given the location of the subject facility, all asbestos abatement must also be performed in accordance with SCAQMD Rule 1403.

Finally, notification of the presence and location of asbestos-containing materials shall be made to all employees and vendors who work within the subject structure, in accordance with California Health and Safety Code, Section 25915, et seq. (also known as Connolley Notification Bills).

Citadel recommends that all undamaged ACMs, ACCMs, and PACMs not to be disturbed as part of this project and scheduled to remain be managed in place in accordance with the EPA's guidance document Managing Asbestos In-Place (a.k.a., the Green Book). The Green Book can be obtained by calling the Toxic Substance Control Act Hotline at (202) 554-1404. Citadel also recommends that the materials be managed in place in accordance with the Client's Operations and Maintenance (O & M program) addressing building cleaning, maintenance, renovation, and general operation procedures to minimize exposure to asbestos.

## **LEAD-CONTAINING MATERIALS**

### **Lead-Containing Materials/Lead-Based Paints (LCM/LBP)**

This survey revealed that building components coated with LCM/LBP were identified within the project area.

Citadel performed lead screening surveys of 25% of each type of housing structure.

At present, there are no explicit state or federal regulations requiring mandatory lead removal prior to disturbance or demolition of structures with identified lead materials. However, there are applicable Cal/OSHA worker protection and training requirements, Cal/EPA waste disposal requirements, CDPH requirements for public and residential buildings, and SB 460 lead hazard regulations that apply to lead-related construction activities and their associated wastes

The following is a brief discussion and summary of applicable regulatory requirements:

- ❖ **Cal/OSHA:** 8 CCR 1532.1 governs occupational exposure to lead. This regulation requires that prior to initiation of certain activities, referred to as "trigger tasks", workers must be trained, medically evaluated, and properly fitted with respiratory protection, and protective clothing until statistically reliable personal eight-hour Time Weighted Average (TWA) results indicate lead exposure levels below the Personal Exposure Limit (PEL) for each unique task which disturbs lead-based and lead-containing coatings. This process is known as a Negative Exposure Assessment (NEA). If the result of the exposure assessment is above the Action Level (AL), additional monitoring is required, and if the result is above the PEL,

additional exposure monitoring, worker protection (including respirator protection and PPE), training and medical requirements apply. At a minimum, contractors performing any lead in construction work shall have a hand washing station and HEPA vacuum present on the job site.

- ❖ "Trigger tasks" are tasks that are assumed to exceed the PEL pending an exposure assessment and encompass the majority of construction activities that disturb surface coatings. Examples of "trigger tasks" range from manual paint scraping as a lower expected exposure up to hot work and abrasive blasting as the highest expected exposures, and include any non-listed task that the employer determines may potentially expose employees to lead levels above the AL.

NOTE: "OSHA does not consider any method that relies solely on the analysis of bulk materials or surface content of lead (or other toxic material) to be acceptable for safely predicting employee exposure to airborne contaminants. Without air monitoring results or without the benefit of historical or objective data (including air sampling, which clearly demonstrates that the employee cannot be exposed above the AL during any process, operation, or activity) the analysis of bulk or surface samples cannot be used to determine employee exposure." OSHA Standard Interpretation dated 5/8/2000.

Furthermore, Cal/OSHA states that these rules apply to "any detectable concentration of lead", without a specified detection level. Due to the Consumer Product Safety Commission currently allowing paint to contain up to 600 parts per million (ppm) of lead for residential consumption and no limits for industrial or commercial coatings, the variation of lead content due to aging and weathering, and the variation of detection limits associated with both paint chip and XRF analysis, all coated surfaces should be treated as potentially containing lead, unless bulk sample analysis indicates that no lead was detected. Positive analytical results can be utilized to indicate that detectable lead is present, but negative XRF results cannot be interpreted as conclusively demonstrating the absence of lead.

Analytical data can be helpful in evaluation of lead-related environmental risks in general but cannot be used to calculate worker exposures and are not a substitute for employee exposure monitoring. As a result of the above, any employee that works around potential lead-based or lead-containing coatings should have hazard communication training (lead awareness) training and personal exposure air monitoring if they will potentially disturb such coatings. Significant additional certification, notification, and work practices are required for materials found to be "lead-based" or where the operation or process involved results in airborne lead exposures exceeding the PEL.

- ❖ Any welding, cutting, or heating of metal surfaces containing surface coatings should be conducted in accordance with 29 CFR 1926.354 and 8 CCR 1537. These regulations require surfaces covered with toxic preservatives, and in enclosed areas, be stripped of all toxic coatings for a distance of at least 4 inches, in all directions, from the area of heat application prior to the initiation of such heat application. There are some provisions for conducting hot work on coated surfaces, but only with required respiratory protection such as properly selected supplied air respirators.
- ❖ **Cal/EPA** through the Division of Toxic Substance Control (DTSC) regulates disposal of lead hazardous waste (22 CCR Division 4.5, Minimum Standards for Management of Hazardous and Extremely Hazardous Wastes). It is the responsibility of the waste generator to evaluate all waste streams produced and ensure that any resulting wastes that may be hazardous under California and Federal RCRA standards for lead be properly handled, packaged

and transported under proper manifest to a permitted hazardous waste storage, treatment and disposal facility.

- ❖ **CDPH:** The Department of Public Health (DPH) has specific requirements (Title 17 Sections 35001 thru 36100) for hazard assessment and work involving lead-based paint (LBP) hazards in public or residential structures. These regulations require special certifications, work practices, and notifications for such activities.
- ❖ **Senate Bill 460 (SB 460):** An act to amend Section 1941.1 of the Civil Code, and to amend Sections 17961, 17980, and 124130 of, and to add Sections 17920.10, 105251, 105252, 105253, 105254, 105255, 105256, and 105257 to, the Health and Safety Code, relating to lead abatement. This bill allows for fines and criminal penalties to be levied on any person who is found to have performed lead abatement without containment or created a measurable lead hazard based upon current CDPH standards. The testing for this determination can be initiated by any local official. A determination of a lead hazard is not solely based upon the lead content of the paint or coating and can be the result of the disturbance of such materials with low concentrations of lead.
- ❖ **EPA Lead Renovation, Repair, and Paint Rule (40 CFR, Part 745):** Beginning in April 2010, contractors performing renovation, repair and painting projects that disturb lead-based paint in homes, child care facilities, and schools built before 1978 must be certified and must follow specific work practices to prevent lead contamination.

## **5.0 SURVEY LIMITATIONS**

The survey and bulk sampling was limited to representative locations of the building(s) that were explicitly defined by the Client to be surveyed. Similar materials found elsewhere within the site should be assumed to be the same unless specifically tested. Demolition inspection techniques were utilized during the survey. Demolition inspection techniques included penetrating wall cavities and coring the floor to the floor joists. Access into the housing unit attic space was limited to a few locations because there were no ceiling access hatches and the attic could not be accessed from the roof vents on the side walls.

Additional suspect materials and/or debris may be present in concealed spaces including, but not limited to, above-ceiling areas, within wall cavities, and beneath floor coverings, but will only be accessible during the course of demolition activities. Care should be exercised when accessing these areas. Any suspect environmentally-regulated materials (ERMs) encountered during the course of demolition/renovation activities that were not previously sampled, including ERMs not specifically addressed herein, should be *presumed* to be ACMs/ACCMs and LCMs until sampled and proven otherwise. The areas that were accessible should be representative of the types, quantities, and conditions of the materials present at the site. Quantities presented in this report are for informational purposes only and should not be the sole basis for an estimate for abatement. Contractors should verify and conduct their own takeoffs for their purposes.

This report has been prepared by Citadel Environmental Services, Inc. exclusively for our Client and their Authorized Representatives. The information contained herein pertains only to accessible materials identified at the referenced property at the time of the survey performed in accordance with a mutually agreed upon scope of work. The findings and recommendations presented are based upon observations of present conditions, and may not necessarily indicate future conditions. Citadel Environmental Services, Inc. implies no warranty to the accuracy of information provided them by outside agents and transmitted herein. The information contained herein may not be used, disclosed, or copied without written permission of the Client.

This survey report is not intended to be a stand-alone design document for the solicitation of bids. This survey report should only be used for developing the scope of work, bid/contract document, and as a reference document.
