## INTRODUCTION

### Initial Study

Pursuant to Section 15063 of the *California Environmental Quality Act (CEQA) Guidelines* (Title 14, California Code of Regulations, Sections 15000 et seq.), an Initial Study is a preliminary environmental analysis that is used by the lead agency (the public agency principally responsible for approving or carrying out the proposed project) as a basis for determining whether an Environmental Impact Report, a Mitigated Negative Declaration, or a Negative Declaration is required for a project. The *State CEQA Guidelines* require that an Initial Study contain a project description, description of environmental setting, identification of environmental effects by checklist or other similar form, explanation of environmental effects, discussion of mitigation for significant environmental effects, evaluation of the project's consistency with existing, applicable land use controls, and the name of persons who prepared the study.

The purpose of this Initial Study is to evaluate the potential environmental impacts of the proposed University of California Riverside ("UC Riverside") North District Development Plan to determine what level of additional environmental review, if any, is appropriate. As shown in the Determination in Section IV of this document and based on the analysis contained in this Initial Study, it has been determined that the proposed NDD Plan could result in potentially significant impacts; therefore, preparation of an Environmental Impact Report (EIR) is appropriate.

The University of California (University), as the lead agency pursuant to CEQA, requires each campus of the University of California to prepare a Long Range Development Plan (LRDP) that sets forth concepts, principles, and plans to guide the future growth of the campus. Pursuant to this obligation, UC Riverside prepared the 2005 LRDP and the supporting Final Environmental Impact Report (Final EIR) for the UC Riverside campus (State Clearinghouse No. 2005041164). In November 2005, The Board of Regents of the University of California (The Regents) certified the Final EIR and approved the 2005 LRDP. In 2006, UC Riverside amended the 2005 LRDP to allow a 3.25-acre deed restriction in the Agricultural Operations fields south of MLK (2005 LRDP Amendment 1). In 2011, UC Riverside approved a major amendment (Amendment 2) to the 2005 LRDP, based on an evaluation of its environmental impacts in a Final EIR (State Clearinghouse No. 2010111034). The LRDP Amendment 2 EIR supplemented the 2005 LRDP EIR, focusing on the incremental environmental effects of LRDP Amendment 2. In 2013, the 2005 LRDP was amended (Amendment 3) to provide an overlay to the land use designation of one 10-acre site on the West Campus for the siting of a solar array project.

The 2005 LRDP, as amended by Amendments 1, 2, and 3, is the land use planning document used by UC Riverside to guide the development of the campus to accommodate a projected student body of 25,000 full time equivalent (FTE) students which was estimated to be reached by 2020. The 2005 LRDP EIR, as augmented and updated by the 2011 LRDP Amendment 2 EIR, is the environmental document that provides a full evaluation of the environmental effects of campus development anticipated under the

2005 LRDP and is used by the Campus to conduct tiered environmental review of specific development projects proposed on the campus, pursuant to CEQA Guidelines Section 15152.

The proposed North District Development Plan (NDD Plan) is a plan put forth by UC Riverside to provide up to 6,000 student beds on the East Campus on an approximately 55-acre site located in the northeastern portion of the campus. The NDD Plan comprises Phase 1 which involves the construction of about 1,500 student beds and associated facilities by 2021 and a future phase(s) which involves the construction of up to 4,500 student beds and associated facilities between 2019 and 2024/5. The project site is developed with Canyon Crest Family Student Housing that was occupied by student families until 2017 and is currently vacant. The site is designated for Family, Apartments, and Residence Hall Student Housing and Related Support, and Athletics and Recreation in the 2005 LRDP. Furthermore, as a student housing project, the proposed project would support current and projected enrollment on the campus. The student population for the campus is projected to exceed the LRDP threshold of 25,000 prior to the projected completion of buildout of the project in 2024/5. Therefore, the University has determined that it will not tier the environmental review of this project from the 2005 LRDP EIR and the 2011 LRDP Amendment 2 EIR, but will instead prepare a stand-alone EIR that evaluates and disclose the potential environmental impacts of the proposed NDD Plan.

At this time, project-level details are available only for Phase 1 development. With respect to the future phase(s) of development, the NDD Plan provides a development program and a land use diagram, but does not have details with respect to specific buildings. Given this level of detail, the EIR for the NDD Plan will provide a program-level analysis for the entire plan and a project-level analysis of the potential environmental impacts from the implementation of Phase 1.

### **Anticipated Project Approvals**

Necessary project approvals are anticipated to include, but are not limited to, consideration of the following by The University of California Board of Regents (anticipated in March 2019):

- Certification of the North District Development Plan EIR,
- Amendment to the UCR LRDP,
- Approval of the North District Development Plan, and
- Approval of the design of the first phase of the proposed project.

### **Public and Agency Review**

The Notice of Preparation (NOP) and this Initial Study will be circulated for public and agency review from June 19, 2018 through July 20, 2018. Copies of the Initial Study are available during normal operating hours at Campus Planning – Capital Asset Strategies, UCR and online at

<http://cpp.ucr.edu/environmental/ceqadocs.html>. Comments on the NOP/Initial Study must be received by 5:00 PM on July 20, 2018. They may be e-mailed to [CEQA@ucr.edu](mailto:CEQA@ucr.edu) or sent to:

Campus Planning – Capital Asset Strategies  
1223 University Avenue, Suite 240  
Riverside, California 92507  
Attn: Tricia D. Thrasher, ASLA, LEED AP

A public scoping meeting for the NDD Plan EIR will be held on July 3, 2018, from 5:30 PM to 7:30 PM at University Village Suite 210 located at 1223 University Avenue, Riverside, California. The public and agency review period for the EIR is anticipated to commence in approximately November 2018.

### **Organization of the Initial Study**

This Initial Study is organized into the following sections:

**Section I – Project Information:** provides summary background information about the proposed project, including project location, lead agency, and contact information.

**Section II –Project Location and Description:** includes a description of the proposed project, including the need for the project, the project’s objectives, and the elements included in the project.

**Section III –Environmental Factors Potentially Affected:** identifies which environmental factors, if any, involve at least one significant or potentially significant impact that cannot be reduced to a less than significant level.

**Section IV – Determination:** indicates whether impacts associated with the proposed project would be significant, and what, if any, additional environmental documentation is required.

**Section V – Evaluation of Environmental Impacts:** contains the Environmental Checklist form for each resource and presents an explanation of all checklist answers. The checklist is used to assist in evaluating the potential environmental impacts of the proposed project and determining which impacts, if any, need to be mitigated or to be further evaluated in an EIR.

**Section VI – Supporting Information Sources:** lists references used in the preparation of this document.

**Section VII – Initial Study Preparers:** lists the names of individuals involved in the preparation of this document.

## I. PROJECT INFORMATION

1. Project title:

North District Development Plan

2. Lead agency name and address:

The Regents of the University of California  
1111 Franklin Street  
Oakland, CA 94607

3. Contact person and phone number:

Tricia D. Thrasher, ASLA, LEED AP  
Principal Environmental Planner  
University of California, Riverside  
(951) 827-1484  
CEQA@ucr.edu

4. Project location:

University of California, Riverside  
Riverside, California 92507

5. Project sponsor's name and address:

University of California, Riverside  
Campus Planning – Capital Asset Strategies  
1223 University Avenue, Suite 240  
Riverside, California 92521

6. Custodian of the administrative record for this project (if different from response to item 3 above.):

Same as above.

## II. PROJECT LOCATION AND DESCRIPTION

The NDD Plan (proposed project) is a proposed land use plan to redevelop an existing student housing project site on the East Campus with a new higher-density student housing project. The NDD Plan designates land uses for the entire 55-acre site, and the Campus anticipates that the plan area will be developed in phases, beginning with Phase 1 in the southern portion of the 55-acre site. The NDD Plan includes a mix of land use designations that would allow for the construction of student housing units (for first year, second year, transfer, and upper division undergraduate and graduate students), support spaces, site improvements, utilities and supporting infrastructure improvements, dining facilities, recreational fields, an athletic field, and related parking.

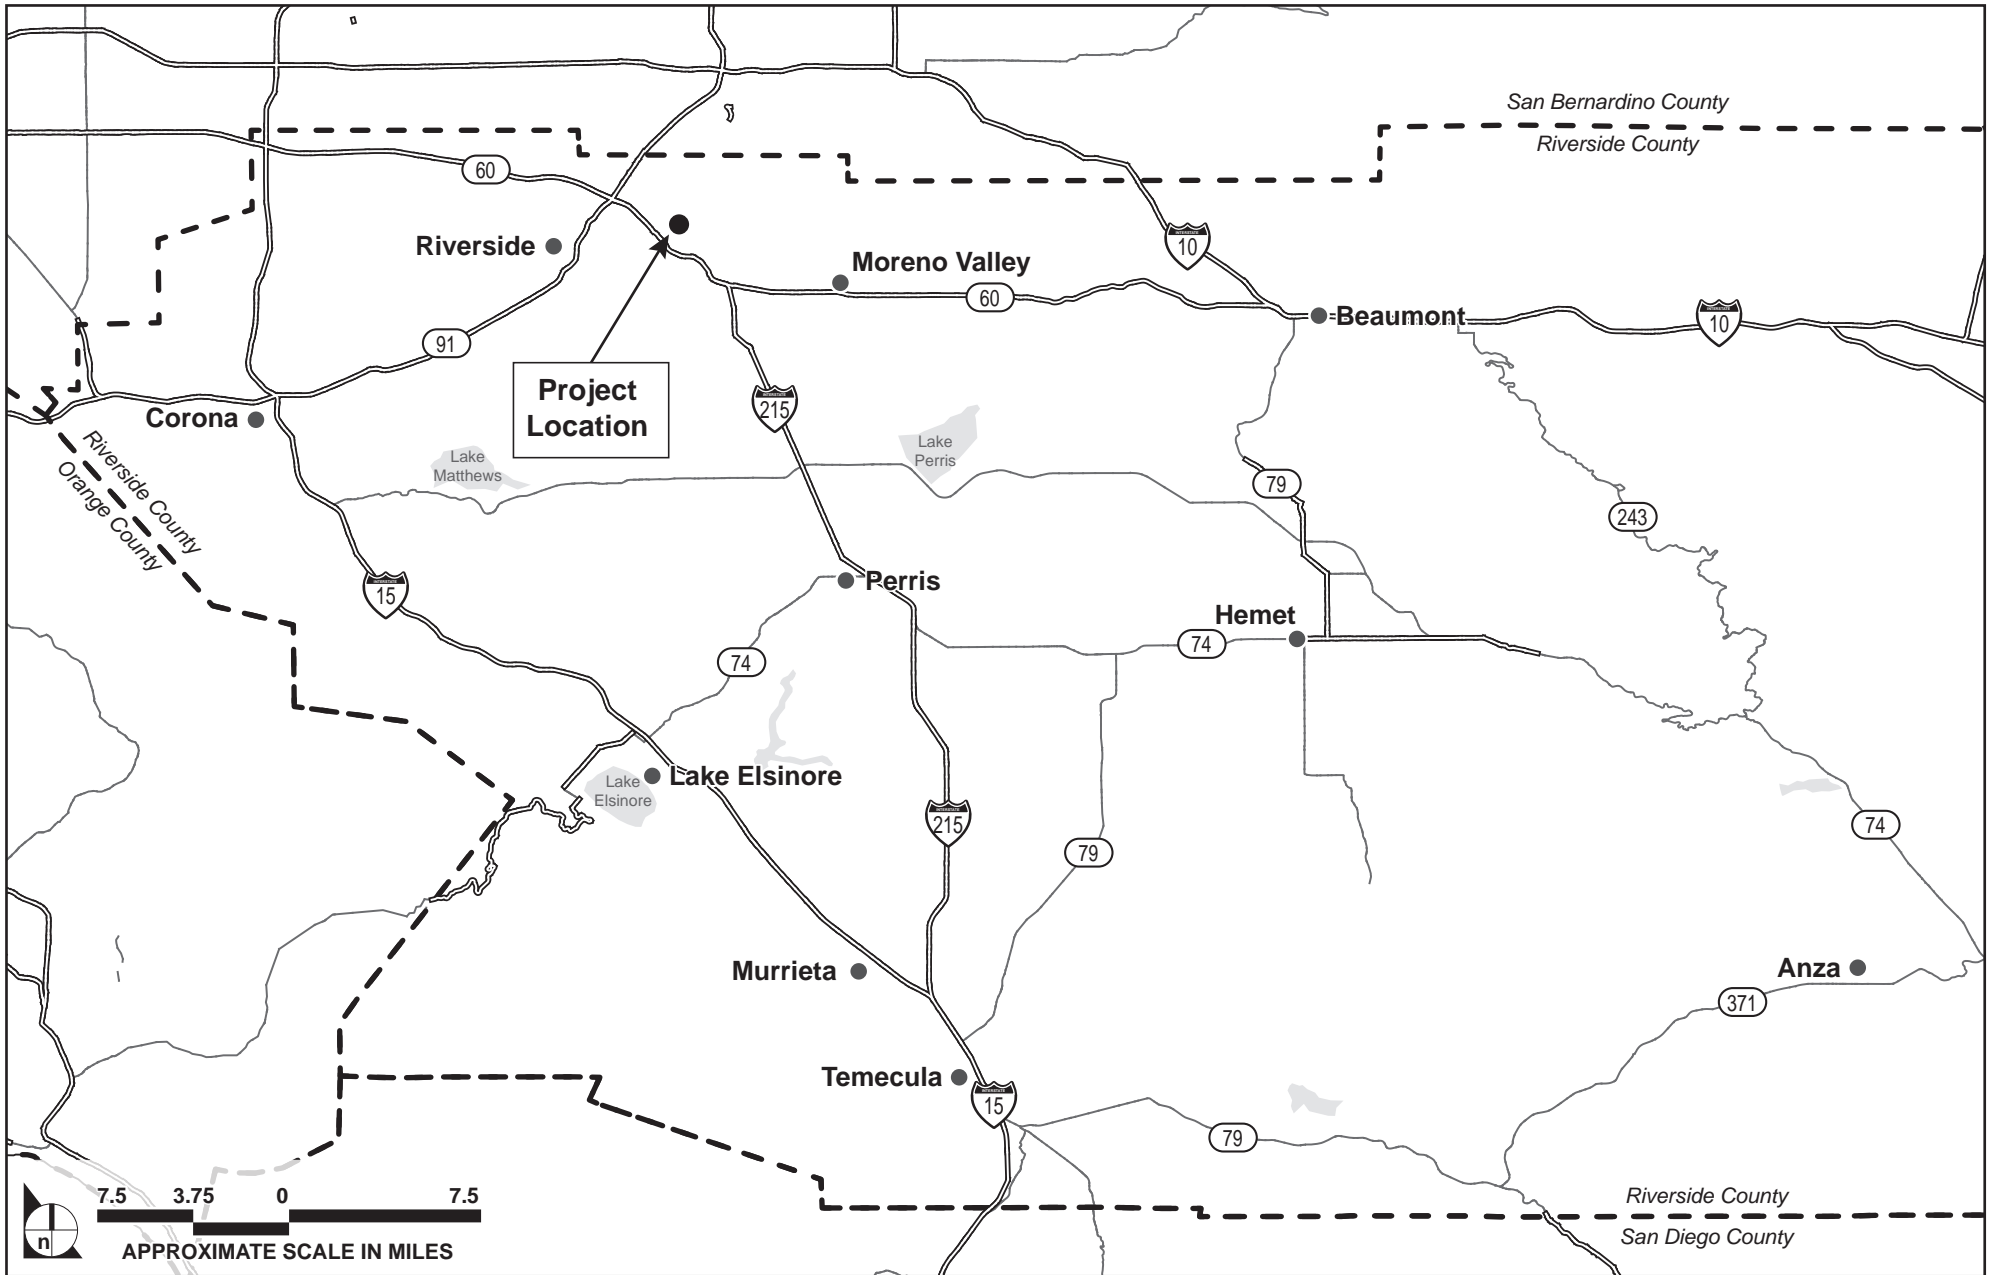

**Location:** The UC Riverside campus is located in the City of Riverside, three miles east of downtown Riverside and just west of the Box Springs Mountains. The City of Riverside is located within the County of Riverside, in a larger geographic area known as the Inland Empire, which includes western Riverside and San Bernardino counties. **Figure 1, Regional Location**, shows the location of the campus in a regional context. The campus is generally bounded by University Avenue and Blaine Street on the north, Watkins Drive and Valencia Hill Drive and its extension south on the east, a line extending east from Le Conte Drive on the south, and Chicago Avenue on the west. The campus is bisected diagonally by the I-215/SR-60 freeway. The area to the east of I-215/SR-60 is called the East Campus.

The proposed NDD Plan area is an approximately 55-acre site located in the northeastern portion of East Campus (**Figure 2, Project Location**). The Plan area consists of the existing vacant Canyon Crest Family Student Housing Complex which includes single-family dwellings, most of which are vacant although some are now used as storage and maintenance facilities, including permanent structures and modular units in the northwestern portion of the site. A park with a playground is located in the western portion of the Plan area, south of Cherry Street. There are nine asphalt-paved residential streets within the Plan area in addition to several gravel roads. The project site is surrounded by Blaine Street and a small shopping plaza to the north and Canyon Crest Drive and the Falkirk Apartments to the west. The Plan area is bounded by Linden Street to the south along with the Police Facility, a track facility, the Student Recreation Center, and the Aberdeen-Inverness (A-I) Residence Halls. To the east of the project site are parking lots, the UC Riverside Child Development Center, and the Campus Corporation Yard (which includes three campus support facility buildings [Corporation A, B, and C], two warehouses (Warehouse #1 and #2), the Mail Services building, the Transportation and Parking Services (TAPS) building and yard, a car shed, a gas storage building, and outdoor storage and parking areas).

### North District Development Plan

**Land Use Plan:** **Figure 3, Proposed Land Use Designations** presents the land use designations that are included in the NDD Plan. **Table 1** below presents the acres assigned to each land use designation/district and the types and intensity of land uses planned for each land use district.

FIGURE 3

**Table 1**  
**North District Development Plan**  
**Proposed Land Use Designations and Districts**

<b>Land Use</b>	<b>Acres</b>	<b>Bed/Spaces/Seats/Mixed Use</b>
Student Residential and Mixed Uses District 1	4.25	700-1,000 Beds 10,000-15,000 sf Mixed Use
Student Residential and Mixed Uses District 2	6.15	800-1300 Beds 13,000-22,000 sf Mixed Use 600 Seat Dining Facility
Student Residential and Mixed Uses District 3	5.45	700-1,400 Beds 30,000-50,000 sf Mixed Use
Student Residential and Mixed Uses District 4	8.40	1,400-2,600 Beds 50,000-70,000 sf Mixed Use
Student Residential and Mixed Uses District 5	3.40	700-1,000 Beds
Athletics Event Center	5.70	5,000-7,000 Seats
Parking 1	2.15	Less than or equal to 1,200 Spaces
Parking 2	4.05	Less than or equal to 1,200 Spaces
Open Space	11.60	--
<i><b>Total Acres</b></i>	<b>51.15</b>	

The NDD Plan provides for the phased development of apartments, mixed-use residential, resident life amenity spaces, living and learning spaces, resident life support spaces, dining facilities, athletics facilities, and parking areas (**Figure 4, North District Development Plan (Conceptual)**). **Table 2** below sets forth the number of student beds and other amenities that would be developed in Phase 1 of the Plan and the additional beds and facilities that would be built in the future phase(s).

The NDD Plan sets forth details regarding the facilities that would be built in Phase 1 and includes a land use diagram to guide the development of the future phase(s). The Plan, however, establishes building heights, noting that heights would range from 5 to 6 stories for the apartment buildings, 5 to 6 stories for residence halls, 1 to 2 stories for mixed use buildings, a 2-story dining facility, and parking structures would be 7 levels.

<b>Unit Mix</b>	<b>Phase 1</b>	<b>Future Phase</b>	<b>NDD Plan Total</b>
Apartments	1,500 beds	2,558 beds	4,058 beds
	361,836 sq. ft.	1,009,811 sq. ft.	1,371,647 sq. ft.
Residence Halls	--	1,200 beds	1,200 beds
		244,059 sq. ft.	244,059 sq. ft.
Residential Floor Amenity / Support Spaces	7,846 sq. ft.	TBD	TBD
Circulation, Mechanical, & Structure	147,958 sq. ft.	TBD	TBD
Living, Learning, Community & Administration	10,704 sq. ft.	TBD	TBD
Support & Maintenance	5,177 sq. ft.	TBD	TBD
Dining Facilities	--	33,380 sq. ft.	33,380 sq. ft.
Field House	--	21,893 sq. ft.	21,893 sq. ft.
Competition Field	--	3,000 seats	3,000 seats
Surface Parking	844 spaces	--	--
Structured Garage Parking	--	2,164 spaces	2,164 spaces

**Open Space and Landscaping:** The NDD Plan proposes a large open space area in the eastern portion of the Plan area. The site material palette for the NDD Plan would include hardscape and softscape materials that are derived from the existing campus aesthetic. Key intersections and open spaces, such as the primary plaza, main building entries, and courtyard patios, would include specialty paving that highlights the importance of those spaces. Planting materials would include native and adaptive species that are drought tolerant, reflect the native landscape of the region, and highlight UC Riverside’s commitment to sustainability and water use reduction. Incorporation of trees throughout the site would provide shade and respite from the heat while creating pleasant places to rest and relax throughout the Plan area.

During construction, tree protection zones would be placed at or beyond the dripline of trees wherever possible. Protection fencing would include 8-foot high chain-link fence. Per the tree survey and arborist evaluation, two tiers of trees would be considered for preservation.<sup>1</sup> Of the 681 trees in the site

1 The full North District Tree Evaluation, completed by Psomas in March 2017, is included as Appendix B to this Initial Study. According to the Evaluation, first tier trees consists of the following criteria: High health rating (4 min.), high aesthetic rating (4 min.), California natives, significant height, significant canopy, significant trunk. The second tier trees are selected for: Moderate-high health rating (3 min.), moderate-high aesthetic rating (3 min.), significant height, significant canopy, significant trunk. The third tier trees include: Low-moderate health

inventory, 46 shrubs, 132 invasive specimens (for example pepper trees) and six short-lived specimens would be removed. Of the remaining 497 trees, 110 trees are first tier and 56 are second tier. All third tier trees would be removed in Phase 1. The arrangement of buildings on the site of the future phase(s) would be positioned to retain clusters of healthy, existing trees. This approach would give the site development an immediate sense of scale and would provide shade for residents and visitors. The goal would be to add replacement trees at a rate of approximately four-to-one, which would help to strengthen the landscape design, highlight pedestrian corridors and provide future shade and comfort throughout the open spaces.

**General Access and Circulation:** Vehicular access would be provided from Linden Street, Blaine Street, and Watkins Drive.

As depicted in **Figure 5**, multi-modal routes would be provided to encourage walking and riding to and from the campus with the intent of creating a pedestrian friendly experience for students, staff, and visitors to the North District. Additional pedestrian walks, plazas, and bicycle routes would be developed under the NDD Plan. Bike lanes shall be included on all major streets. Bike parking would be provided throughout the NDD Plan area. Secure bike parking would be included inside the buildings as well as in outdoor, secure parking facilities. These would be provided at a rate of one stall per four residents. Temporary and visitor parking would be provided at all residential buildings, the NCAA field, and the dining facility at a rate of 2.5 percent of the maximum occupancy, with a minimum of four spaces per building.

**Service Access:** The Plan's network of pedestrian walks would be sized and designed to allow for service access along the main multi-modal pathways throughout the site. Convenient pick-up locations for each housing area along the service routes would facilitate trash and recycling storage at residential buildings with. The new dining facility would include loading and service area for food delivery and substantial trash and recycling collection.

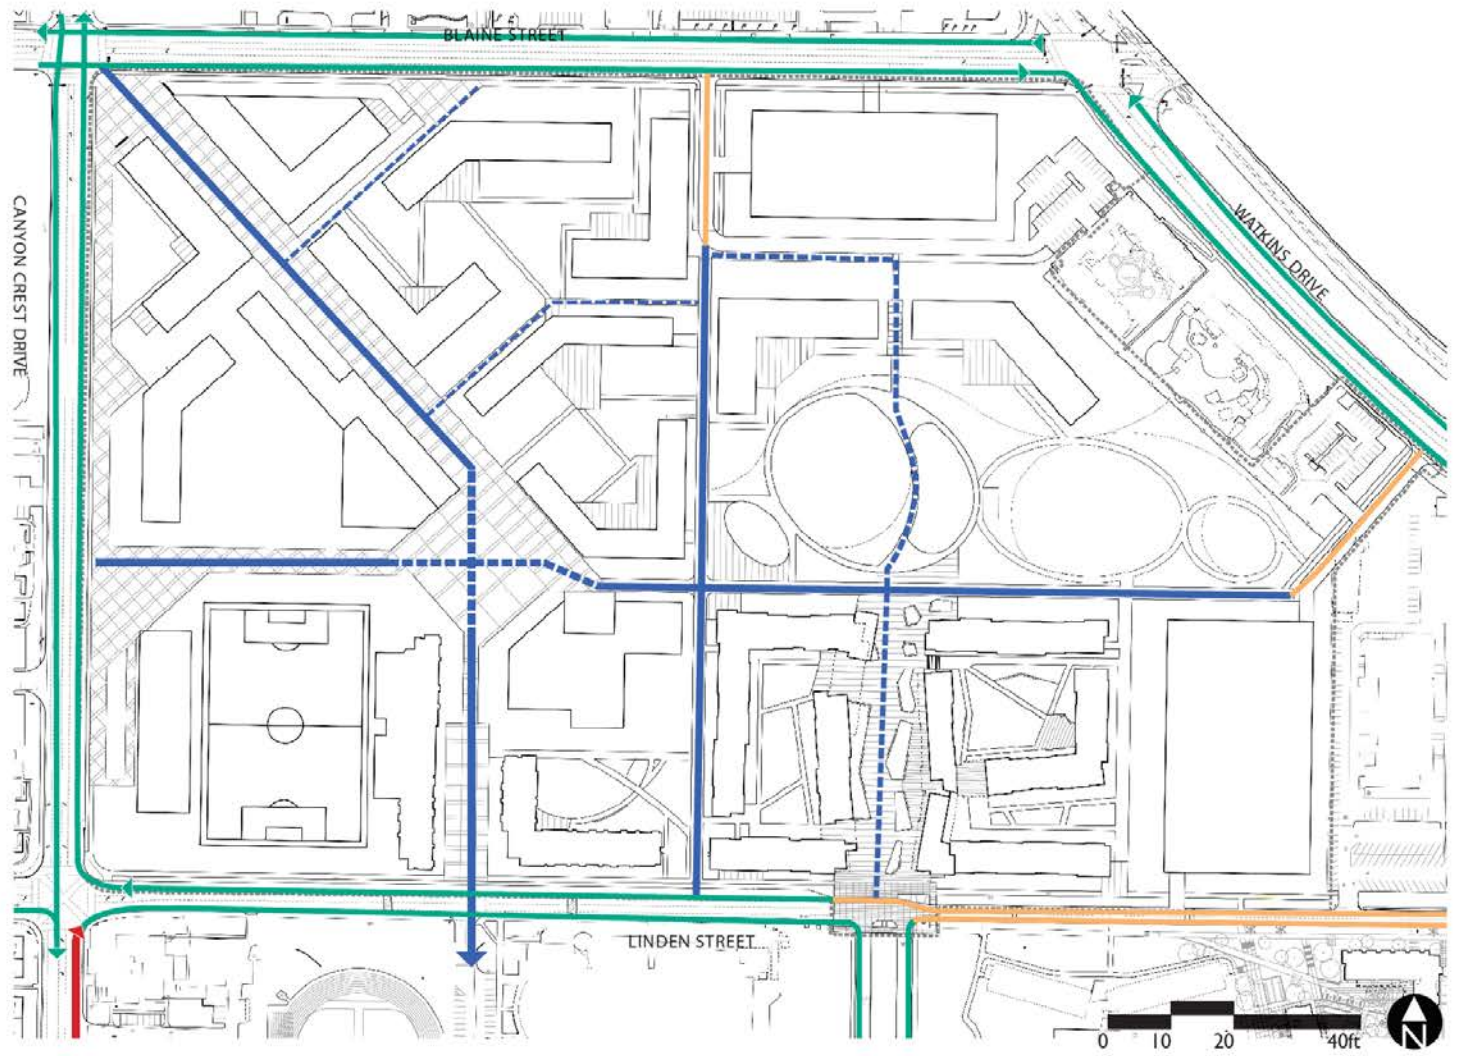

**Emergency Access:** The NDD Plan would be designed to allow for direct emergency access to all buildings. Access would be provided on the surrounding streets as well as on the multi-modal malls throughout the development site. The design of these paths would meet the requirements for emergency vehicles, including the 22,000 pounds per square inch (psi) loading and access to building facades. Pedestrian egress routes have also been established to provide safe and direct routes for evacuation of the site during emergencies.

#### **Utilities:**

*Water:* Riverside Public Utilities (RPU) currently provides water to the Campus. Combined 12-inch fire and water lines would be installed throughout the NDD Plan area to serve future buildings. Tie-in points

---

rating (less than 3), low-moderate aesthetic rating (less than 3), California invasive tree species, trees that are short lived and/or brittle, trees that are dead or dying.

SOURCE: Solomon Cordwell Buenz, 2018

FIGURE 5

North District Development Plan - Multi-Modal Routes

to the existing public 14-inch public water line would be installed at the intersections of Linden Street and the recreational mall and Linden Street and Aberdeen Drive. As shown in **Table 3**, peak domestic water demand under Phase 1 would be about 940 gallons per minute (GPM) and at NDD Plan buildout would be approximately 3,340 GPM.

**Table 3**  
**Water and Wastewater Projections**

Utility Type	Phase 1 (GPM) <sup>a</sup>	Future Phase (GPM)	NDD Plan Total (GPM)
Peak Domestic Water Demand	940	2400	3,340
Wastewater Generation	940	2400	3,340
<i>Source: UCR Facilities, May 2018</i>			

*Wastewater:* Sanitary sewer lines would be installed to serve the proposed buildings. Three tie-in points would be installed at Linden Street and Aberdeen Drive, Linden Street nearby the recreational mall, and at Canyon Crest Drive. Development under the NDD Plan would upsize 800 feet of the existing City sewer line located within Canyon Crest Drive, north of Linden Street, from 8 inches to 15 inches.

*Stormwater:* The NDD Plan area would be separated into seven drainage areas (Drainage Areas A through G). Stormwater flow would be directed towards proposed detention and treatment areas within each drainage area.

*Electricity and Natural Gas:* The RPU currently provides electricity to the campus. Natural gas is provided to the campus by the Southern California Gas Company (SCGC). The Campus plans to size the new utility infrastructure to accommodate the future development in the NDD Plan area.

**Sustainable Design Features:** The approach to sustainable project master planning would be as follows:

*Physical and Environmental Design*

- The NDD Plan will minimize site disturbance by locating the development on land that is previously developed (the site currently houses the Canyon Crest Family Student Housing complex) and by preserving as many Tier 1 and Tier 2 trees as possible, focusing on larger clusters of those trees. New trees that are adaptive to the local environment would be added at a rate of approximately 4:1.

- The NDD Plan attempts to replicate natural site hydrology processes, to manage 85th percentile rainfall event rainwater runoff onsite using low-impact development strategies.
- Using a combination of existing and new shading trees, planting areas, and high albedo paving and roofing materials, the NDD Plan reduces the urban heat island effect resulting from roof and paved non-roof site surfaces.
- To increase night sky access, improve nighttime visibility, and reduce the consequences of development for the campus wildlife and off-campus neighbors, the NDD Plan will be designed to minimize light pollution by limiting uplight and light trespass beyond the Plan area, using the International Dark Sky Association's (IES/IDA) Model Lighting Ordinance light fixture selection criteria.
- To manage solid waste, the project will provide convenient locations for the collection of waste, recycling, and composting throughout the development and will recycle, reuse, or salvage at least 50 percent of nonhazardous demolition and construction debris.

#### *Organization/Building Form and Orientation*

- Each building will be configured for the best use of space and solar orientation possible within the overall masterplan concept. Design features would incorporate passive solar design to minimize heat gain and glare on south facing windows. All south, west, or southwest facing windows would be recessed by two feet from the rest of the building with an external overhang at the top floor, whereas north facing windows would be flush with the building's exterior to allow for slightly larger units.
- The NDD Plan will promote livability, walkability, and transportation efficiency, by being a compact development with a 33 dwelling units per acre residential density.

#### *Landscape and Irrigation Systems/Materials*

- Outside of the athletics event center, outdoor water use would be reduced by prioritizing the planting of native/adaptive and drought tolerant plant species, with sub-surface irrigation to reduce maintenance, runoff, and fertilizer and pesticide applications. Outdoor water use will comply with the state of California Model Water Efficient Landscape Ordinance. The Ordinance seeks to increase water efficiency standards for new and retrofitted landscapes through more efficient irrigation systems, greywater reuse (optional), onsite storm water capture (optional), and by limiting the portion of landscapes that can be covered in turf.

- The proposed design of the NDD Plan would provide tree-lined blocks and shaded sidewalks to encourage walking, skating, and bicycling. These strategies also help reduce urban heat island effects, improve air quality, increase evapotranspiration, and reduce cooling loads in buildings.

### *Mobility Systems*

- North District is located on an existing bicycle network, with existing bike paths and lanes on Watkins Drive, Blaine Street, and Canyon Crest Drive. The Plan will provide long-term bicycle storage for at least 30 percent of all regular building occupants, according to the LEED rating system requirements, which exceeds the campus existing requirements of 25 percent (Appendix B of the RFP). The Plan will also provide short-term bicycle storage for at least 2.5 percent of all peak visitors to the North District.
- North District is also located on an existing quality public transit network that serves to reduce the number of vehicle miles travelled significantly for the future residents of the development.
- The NDD Plan will provide safe, appealing, and comfortable street environments (walkable streets) that encourage the existing patterns of walking, biking, and skate-boarding on campus to continue onto the North District.

**Plan Phasing:** The construction under the NDD Plan would occur from 2019 through 2024/5. Construction would occur in phases with Phase 1 providing about 1,500 beds and occurring from 2019 to 2021. The phasing of the remainder of the NDD Plan development is uncertain at this time and may occur in one or more phases. The entire development program is expected to be completed by 2024/5.

**Population:** As a residential project, development under the NDD Plan is intended to meet the needs of projected campus enrollment and would not, of itself, increase the enrollment at UC Riverside. The NDD Plan would add an additional approximately 5,258 on-campus beds for students, and compared to existing conditions, about 5,100 students would live on campus rather than seeking housing in the City of Riverside and other communities. The NDD Plan would add approximately 70 staff to the campus.

### **Phase 1**

Phase 1 would be the first development completed within the NDD Plan. As described in **Table 4**, Phase 1 proposes to construct on-campus student apartments, living and learning spaces, resident life amenity spaces, two surface parking lots, and reconfigure two small adjacent parking lots that serve the existing UC Riverside Child Development Center (**Figure 6, North District Development Plan - Phase 1 Site Plan**).

Single Occupied Unit (RA Unit)	20	20	483	9,660
2 Bedroom / 2 Bathroom Apartment (RD)	2	4	864	1,728
1 Bedroom / 1 Bathroom Apartment (ARD)	8	8	483	3,864
<b>Total Program</b>	<b>400</b>	<b>1,500</b>	<b>911</b>	<b>361,836</b>
Residential Floor Amenity / Support Spaces				7,846
Circulation, Mechanical, & Structure				147,958
Living, Learning, Community & Administration				10,704
Support & Maintenance				5,177
Surface Parking				775 spaces
<b>Total Square Footage</b>				<b>533,521</b>
<b>PROJECT TOTALS</b>	<b>400</b>	<b>1,500</b>		<b>533,521</b>

**Student Apartment Buildings:** Student apartments would be located in four buildings, Buildings A through D. Buildings A and B would be 5 to 6 stories in height and Buildings C and D would be 4 to 5 stories high. Each set of buildings, A-B and C-D, would have a general public entrance as well as separate resident entrances.

**Landscaping:** New tree plantings are proposed throughout the site to highlight main walkways and provide canopy in courtyard spaces. About 105 existing trees would remain on the proposed Phase 1 project site (1st and 2nd tier trees and palm trees) and up to 140 proposed trees would be planted. All tier three trees would be removed to eliminate those that are unhealthy and are invasive. Landscaping would consist of climate adaptive planting.

**Parking:** Phase 1 of the proposed project would include four surface parking lots for students, faculty, visitors, and the UC Riverside Child Development Center (see **Table 5**).

---

**Table 5**  
**Proposed Surface Parking**

Parking Location	Number of Spaces
Northern Lot	451
Southeastern Lot	324
North Childcare Lot	38
South Childcare Lot	31
<b>Total</b>	<b>844</b>

---

**General Access and Circulation:** Vehicular access to Phase 1 of the project site would be from the south along Linden Street, from the north along Blaine Street, or from the East via Watkins Drive.

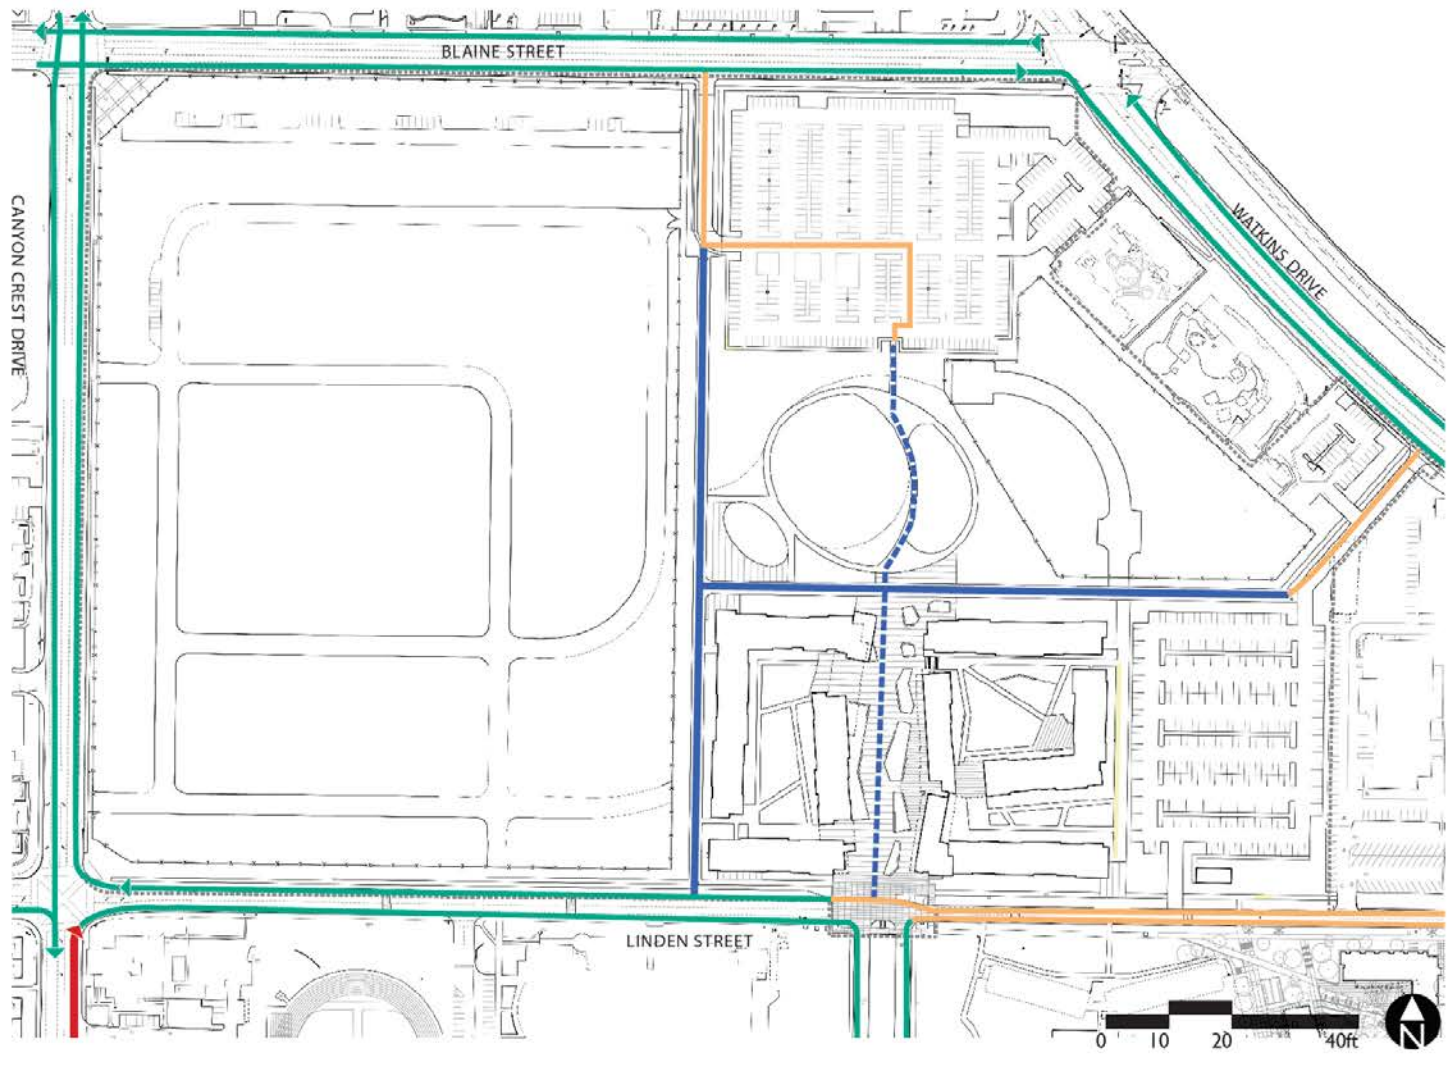

As shown in **Figure 7**, multi-modal routes would be provided to encourage walking and biking to and from the campus with the intent of creating a pedestrian friendly experience for students, staff, and visitors to the project site. Bike lanes would exist on all streets and bike routes include the following classifications: Class 1, 8-foot wide separated or buffered bike lanes; Class 2, 5 to 6-foot striped lanes on streets; Class 3 shared walkways; and Class 4 shared streets with sharrow markings.<sup>2</sup> The Phase 1 project site would have 42 secured indoor bicycle parking space, 345 outdoor secured bicycle parking spaces, and 32 outdoor temporary bicycle parking spaces.

**Service Access:** Service access would be provided via the north south road that transects the project site and from Watkins Avenue to the north south road. The project site's network of pedestrian walks would be sized and designed to allow for service access along the main multi-modal pathways and residential buildings would facilitate trash and recycling storage with convenient pick up locations for each housing area located along the primary service routes.

**Emergency Access:** In Phase 1, the design concept would establish all future emergency access routes, giving responders full access to all buildings and to the undeveloped portions of the site. Emergency access would be provided via Blaine Street, Watkins Avenue, Linden Street, and Canyon Crest Drive. On the project site, emergency vehicles would travel down the north-south road that transects the project site and around the proposed apartment buildings. Where initial buildings would be developed, pedestrian egress routes would also be established to provide safe and direct routes for evacuation of the site during emergencies.

---

FIGURE 7

## **Utilities:**

*Water:* Existing water lines are located within Blaine Street, Canyon Crest Drive, and Linden Street. A combined 12-inch domestic water and fire line is proposed between the grouped apartment buildings and would connect to existing water line in Linden Street at Aberdeen Drive (tie-in point to public water line). Peak domestic water demand under Phase 1 is estimated at 940 gallons per minute.

*Wastewater:* Existing 8-inch sanitary sewer lines are located in Canyon Crest Drive and Linden Street. There are two existing 8-inch sanitary sewer lines in Linden Street; one that serves the vacant Canyon Crest Family Student Housing complex and one that serves the corporation yard located adjacent to the east of the project site. Phase 1 of the proposed project would install sanitary sewer lines that serve each apartment building and would connect to the existing sanitary sewer line in Linden Street at Aberdeen Drive (tie-in point). Phase 1 of the proposed project would also upsize 1,200 feet of the existing City sewer line located within Canyon Crest Drive, south of Linden Street, from 8 inches to 15 inches.

*Stormwater:* The Phase 1 project site is divided into five drainage areas (Drainage Areas A through E). Site drainage is designed for these five areas. Stormwater detention and treatment areas are proposed throughout each of the drainage areas near apartment buildings, surface parking lots, and the proposed park area. Detention and treatment areas would be composed of series of planters designed as gardens and swales that collect, slow, treat and infiltrate stormwater. Stormwater drainage from the Phase 1 project site would generally drain to the west.

**Sustainable Design Features:** The proposed Phase 1 site would be designed to meet all provisions of the University Policy on Sustainable Practices and consider the UC Carbon Neutrality Initiative by targeting Leadership in Energy and Environmental Design (LEED) certification at a Silver level for individual buildings using the framework of the LEED rating system, the project proposes sustainable development that minimizes energy and water use, employs low-impact development criteria, reduces resource consumption for construction and operation, and provides healthy and comfortable living and working spaces. Sustainable features included in Phase 1 would be the same as the sustainable features described above for the NDD Plan.

**Construction:** Phase 1 would demolish the existing Canyon Crest Family Student Housing. Site mobilization and preparation would occur from Spring 2019 to Summer/Fall 2019. Building construction, including surface parking lot construction, would commence in late Summer/early Fall 2019 and would be completed in Fall 2021. Landscaping activities and off-site repairs would occur in the Summer of 2020.

Construction workers would access the site via Blaine Street and Watkins Drive. Construction workers would park on the north parking area, which would also be used as a laydown area for construction of the proposed apartments. A construction trailer compound would be located adjacent to the northern border of the parking and laydown area. Construction workers would also park in an area west of the proposed apartments, which would also be used as a laydown area for construction of the apartments.

**Population:** The first phase of the proposed project would house approximately 1,500 students, which would include both undergraduate and graduate students.

### **Project Objectives:**

The objectives of the NND Plan are to:

- Support the Campus goal to house up to 50 percent of enrolled students on-campus and to guarantee on-campus housing to all freshman and transfer students;
- Enhance the student experience by integrating the principles of residential and academic life;
- Promote environmental and sustainability goals by reducing vehicular trips to and from the campus;
- Provide affordable on-campus student housing;
- Develop and operate approximately 4,000 to 6,000 beds of student housing for first year, second year, transfer, upper division undergraduate students and graduate students, along with adequate support spaces, multi-functional spaces, amenities and associated infrastructure while maximizing the building height and density of the entire project site;
- Provide an approximately 600-seat dining facility by delivery of the Future Phase of the project;
- Complete and open the student housing component of the first phase of approximately 1,500 beds by 2020;
- Complete and open the Athletics Event Center as soon as feasible;
- Establish a new iconic gateway to the Campus on the northwest corner of the project site;
- Provide adequate parking to support all phases of development through delivery of the Future Phase.

### **Discretionary approval authority and other public agencies whose approval is required:**

As the public entity principally responsible for approving or carrying out the proposed project, The Regents of the University of California (Regents) is the Lead Agency under CEQA. The Regents is responsible for complying with the California Environmental Quality Act and determining whether to approve the proposed project.

The South Coast Air Quality Management District (SCAQMD) would act as a responsible agency as any emergency generators included in the project would require a permit from the SCAQMD. There are no natural resources on or near the project site that could trigger the involvement of any trustee agencies.

### III. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would potentially be affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- |  |   |   |
|--|---|---|
| <input checked="" type="checkbox"/> Aesthetics                         | <input type="checkbox"/> Agricultural and Forest Resources      | <input checked="" type="checkbox"/> Air Quality                   |

| <input checked="" type="checkbox"/> Mandatory Findings of Significance |   |   |

#### IV. DETERMINATION

On the basis of the initial evaluation that follows:

- I find that the proposed project WOULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there would not be a significant effect in this case because revisions in the project have been made that would avoid or reduce any potential significant effects to a less than significant level. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment. An ENVIRONMENTAL IMPACT REPORT will be prepared.

## V. EVALUATION OF ENVIRONMENTAL IMPACTS

As previously noted, the Campus has determined that the NDD Plan is not within the scope of the amended 2005 LRDP and the associated 2005 LRDP EIR and Amendment 2 EIR. Therefore, the analysis in this Initial Study is not tiered from the two program EIRs that address campus development under the amended LRDP. However, this Initial Study utilizes the information in the two EIRs to characterize existing conditions, as appropriate. The 2005 LRDP EIR and the LRDP Amendment 2 EIR are incorporated by reference into this Initial Study.

Although the NDD Plan is not within the scope of the amended 2005 LRDP, UC Riverside has determined that the 2005 LRDP Planning Strategies (PS) and Planning Principles (PP) that have been incorporated into projects proposed under the 2005 LRDP are important to the Campus and will be incorporated into all development under the NDD Plan.<sup>3</sup> The analysis in this Initial Study references applicable Planning Strategies and Planning Principles.

Appendix G of the *State CEQA Guidelines* provides a suggested format to use when preparing an Initial Study. The Environmental Checklist used in this document adopts a slightly different format with respect to response column headings, while still addressing the Appendix G checklist questions for each environmental issue area.

The following Environmental Checklist uses the following response headings to identify potential environmental effects that will be addressed in the NDD Plan EIR:

**Impact to be Analyzed in the EIR:** This category includes those impacts that may or may not be significant. The effect may be a less than significant impact that will be addressed to provide a more comprehensive analysis; an impact for which further analysis is necessary or desirable before a determination about significance can be made; an impact that is potentially significant but may be reduced to a less than significant level with the adoption of mitigation measures, or an impact that may be significant and unavoidable.

**No Additional Analysis Required:** This category includes those impacts where the project would clearly not result in an impact or would clearly result in a less than significant impact under CEQA criteria, and no additional analysis beyond that provided in the Initial Study is necessary.

---

<sup>3</sup> Copies of the 2005 LRDP Planning Strategies (PS) and Planning Principles (PP) and mitigation measures (MM) are included in Appendix A to this Initial Study.

**Impact Questions and Responses**

<b>5.1 AESTHETICS</b>	Impact to be Analyzed in the EIR	No Additional Analysis Required
Would the project...		
a) Have a substantial adverse effect on a scenic vista?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**DISCUSSION:**

- a. A scenic vista is generally defined as an expansive view of highly valued landscape as observable from a publicly accessible vantage point. In the vicinity of the UC Riverside campus, the Box Spring Mountains are the most prominent visual feature from many locations, and sweeping panoramic views of the Box Springs Mountains were considered a scenic vista. Although panoramic views of the Box Springs Mountains are available in the vicinity of the campus, no specific objects, scenes, settings, or features of interest are visible within that portion of the Box Springs Mountains adjacent to the campus. No specific focal views of the Box Springs Mountains were identified by the Campus in the 2005 LRDP EIR, and scenic vistas were considered to be limited to panoramic views of the Box Springs Mountains from publicly accessible viewpoints. Implementation of the NDD Plan, including the Phase 1 project, could have an adverse effect on a scenic vista. The EIR will include an evaluation of the proposed project’s impacts with regard to scenic vistas.
  
- b. The campus is bisected by the I-215/SR-60 freeway, and is generally bounded by University Avenue, Canyon Crest Drive, Blaine Street, Watkins Drive, Valencia Hill Drive, Le Conte Drive, and Chicago Avenue. None of these roadways is officially designated or identified as eligible for designation as a state scenic highway. Therefore, implementation of the NDD Plan, including the Phase 1 project, would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway, and no impact would occur. No further analysis of this issue is required in the EIR.
  
- c. The East Campus under existing conditions is primarily developed with academic and support buildings, student residences, landscaping, roadways, and parking areas. The 2005 LRDP EIR indicated that the introduction of new academic and residential structures on large parcels has the potential to degrade the visual character and quality of the campus. Implementation of future development on the campus would be guided by a range of LRDP planning strategies, including Land Use 1 through 3, Open Space 1 through 7, Conservation 1 through 4, Campus and Community 1, and Development Strategy 1 through 3, all of which would preserve or enhance the visual character and quality of the campus. In addition, future development on the campus would continue existing campus programs and practices, such as PP 4.1-1 and PP 4.1-2(a) and (b),

which would require that buildings be designed to be consistent with the Campus Design Guidelines and that mature trees be relocated, whenever feasible. It is anticipated that development under the NDD Plan, including the Phase 1 project, would also implement the LRDP planning strategies and existing campus programs and practices mentioned above and would not substantially degrade the existing visual character or quality of the site and its surroundings, and this impact would be less than significant. However, in order to provide complete information and discussion of this topic, further analysis of this issue will be included in the EIR.

- d. Although there are some sources of light and glare currently on the project site, implementation of the NDD Plan, including the Phase 1 project, would result in the construction of a large number of new substantially taller buildings with increased sources of light and/or glare. The NDD Plan EIR, which includes analysis of the Phase 1 project, will review new sources of light and glare to evaluate the potential impacts on day or nighttime views in the area.

#### **CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not substantially damage scenic resources; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to this topic and further analysis in the NDD Plan EIR is not required.

All other potential cumulative aesthetic impacts for all other topics will be addressed in the NDD Plan EIR.

<b>5.2 AGRICULTURAL AND FORESTRY RESOURCES</b>	Impact to be Analyzed in the EIR	No Additional Analysis Required
Would the project...		
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)) or timberland (as defined by Public Resources Code Section 4526)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a. As shown in Figure 4.2-1 of the 2005 LRDP EIR (Farmland on the UC Riverside Campus), development within the NDD Plan area, including the Phase 1 project site, would not be within an area designated as Farmland. Implementation of the NDD Plan, including the Phase 1 project, would not result in the loss of Farmland, and there would be no impact. Further evaluation in the NDD Plan EIR is not required.
- b. Lands affected by proposed development under the NDD Plan, including the Phase 1 project, are not zoned for agricultural use or under a Williamson contract. Therefore, no impacts would occur and further evaluation in the NDD Plan EIR is not required.
- c. There are no areas within the NDD Plan area, including the Phase 1 project site, that are zoned as forestland or timberland. No impact would occur and further evaluation in the NDD Plan EIR is not required.
- d. No part of the NDD Plan area, including the Phase 1 project site, contains forest lands. Furthermore, the surrounding area does not include any forest land or timber land. No impact would occur and further evaluation in the NDD Plan EIR is not required.
- e. The lands surrounding the NDD Plan area, including the Phase 1 project site, are campus lands and not zoned for agricultural use. In addition, the NDD Plan, including the Phase 1 project, would neither construct any uses sensitive to agricultural noise or activities nor construct any uses that would conflict with agricultural practices. Therefore, the NDD Plan, including the Phase 1 project, would not create land use conflicts with adjacent agricultural lands that could result in the abandonment of agricultural uses or cause the lands to convert to non-agricultural uses. Therefore, no impact would occur and further evaluation in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

The NDD Plan, including the Phase 1 project site, would not convert Prime Farmland to non-agricultural uses. Additionally, the NDD Plan and the Phase 1 project site would not result in an impact on forest land, timberland, lands under Williamson Act contract, and would not result in conversion of farmland to non-agricultural uses. Further analysis of cumulative impacts in the NDD Plan EIR is not required.

<b>5.3 AIR QUALITY<sup>4</sup></b>		
Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a. Implementation of the proposed NDD Plan would result in short- and long-term emissions of criteria air pollutants from mobile and stationary sources. These emissions would contribute to the non-attainment status of the South Coast Air Basin for ozone and airborne particulate matter. The NDD Plan EIR will analyze whether implementation of the NDD Plan would conflict with or obstruct implementation of applicable air quality plans. The NDD Plan EIR will also contain analyses of project-specific impacts associated with the Phase 1 project.
- b. New vehicle trips generated by development under the NDD Plan, including the Phase 1 project, and construction activities could increase pollutant levels, and could contribute to a violation of an air quality standard. Emergency generators installed as part of the project could also emit pollutants. The NDD Plan EIR will examine the potential for vehicle and stationary source emissions under the NDD Plan (including emissions associated with the Phase 1 project) to violate state and federal air quality standards or to contribute to existing air quality violations. This issue will be further evaluated in the NDD Plan EIR.
- c. Construction and operation of development planned under the NDD Plan, including the Phase 1 project, would generate air pollutants that could be considerable in a regional, cumulative

---

<sup>4</sup> In 2015, the California Supreme Court in *California Building Industry Association v. Bay Area Air Quality Management District (CBIA v. BAAQMD)* ruled that CEQA generally does not require a lead agency to consider the impacts of the environment on the future residents or users of the project. Specifically, the decision held that an impact of the existing environment on the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project, including future users and residents, exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. Thus, in accordance with Appendix G of the State CEQA Guidelines and the *CBIA v. BAAQMD* ruling, the project would have a significant impact related to exposure of project residents and structures to hazards related to geology and soils only if the project would exacerbate existing conditions.

context. The EIR will include an evaluation of the air quality impacts that could result from implementation of the NDD Plan (including emissions associated with the Phase 1 project) and from other foreseeable projects in the region to determine whether increases in non-attainment criteria pollutants would be cumulatively considerable. This issue will be further evaluated in the NDD Plan EIR.

- d. Sensitive receptors, considered to be places where children, the elderly, and other sensitive people are located, are more susceptible to the effects of air pollution than the general population. Nearby toxic air contaminants (TAC) and carbon monoxide (CO) pollution can impact sensitive receptors. Sensitive receptors on campus include child care centers, staff/faculty housing, and recreational areas. Implementation of the NDD Plan would result in increased construction, traffic, and operations, which would increase emissions of pollutants, including carbon monoxide, TACs, dust, and ozone precursors. The NDD Plan EIR will include a detailed analysis of increased pollutant emissions under the NDD Plan (including emissions associated with the Phase 1 project) and potential effects on sensitive receptors.
- e. Construction of projects within the NDD Plan area, including the Phase 1 project, would require the use of diesel-fueled equipment and architectural coatings, both of which have an associated odor. However, these odors would be short-term and temporary and would not be pervasive enough to affect a substantial number of people nor would they be objectionable. Routine operation of development under the NDD Plan, including the Phase 1 project, would not involve activities that typically produce odors such as research facilities, wastewater treatment, manufacturing, and agriculture. Occasional use of maintenance products could produce localized odors, but they would be temporary and limited in area. Additionally, there could be airborne odors resulting from cooking activities associated with new dining facilities and odors from new trash receptacles. However, these odors would not be pervasive enough to cause objectionable odors affecting a substantial number of people. Consequently, short-term construction and long-term operation from implementation of the NDD Plan, including the Phase 1 project, would not create objectionable odors that could affect a substantial number of persons, nor expose project site occupants to substantial odors, and the impact would be less than significant. Further evaluation in the NDD Plan EIR is not required.

#### **CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not create objectionable odors that could affect a substantial number of persons, nor expose project site occupants to substantial odors; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to this topic and further analysis in the NDD Plan EIR is not required.

All other potential cumulative air quality impacts for all other topics will be addressed in the NDD Plan EIR.

## 5.4 BIOLOGICAL RESOURCES

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### DISCUSSION:

- a. The NDD Plan area, including the Phase 1 project, is a disturbed site that has been previously developed with the existing Canyon Crest Family Student Housing complex. According to Figure 4.4-1 from the 2005 LRDP EIR, the NDD Plan area, including the Phase 1 project, is not identified as within an area containing sensitive biological resources. Therefore, the proposed development within the NDD Plan area, including construction of the Phase 1 project, would have no impact on special-status species. Further evaluation in the NDD Plan EIR is not required.
- b. Riparian habitat, including designated California gnatcatcher critical habitat, exists on the campus. However, the NDD Plan area, which includes the Phase 1 project site, is not located within a riparian zone or within gnatcatcher critical habitat. Implementation of the NDD Plan, including the Phase 1 project, would have no impact on a sensitive natural community. Further evaluation in the NDD Plan EIR is not required.

- c. Although there are federally protected seasonal wetlands or jurisdictional waters of the United States on the UC Riverside campus, there are none within the NDD Plan area. Therefore, implementation of the NDD Plan, including the Phase 1 project, would not affect any federally protected seasonal wetlands or jurisdictional wetlands. Further evaluation in the NDD Plan EIR is not required.
- d. The NDD Plan area, which includes the Phase 1 project site, is previously disturbed land and is surrounded by urban land uses on all sides. Therefore, the site does not serve as a wildlife corridor.

The existing trees within the NDD Plan area provide important character and environmental benefits, including shade, and have been a cherished part of the Canyon Crest Family Student Housing community. Per the tree survey and arborist evaluation, two tiers of trees would be considered for preservation. Of the 681 trees in the site inventory, 46 shrubs, 132 invasive specimens (for example pepper trees) and six short-lived specimens would be removed. Of the remaining 497 trees, 110 trees are first tier and 56 are second tier (see above for definition of tiers). The remaining are third tier trees, which would be removed in the Phase 1 project. Removal of trees could impact nesting birds. **Mitigation Measures BIO-1** and **BIO-2** described below would be implemented to reduce any potential impact on nesting bird species to a less than significant level. Furthermore, the NDD Plan would protect valuable existing trees based on the tree locations and qualities. The arrangement of buildings on the NDD Plan site would be positioned to retain clusters of healthy, existing trees when possible. Replacement trees would be planted within the Plan area at a rate of approximately four-to-one, which would help to strengthen the landscape design, highlight pedestrian corridors, and provide future shade and comfort throughout the open spaces. During construction, tree protection zones would be placed at or beyond the dripline of trees wherever possible. Any construction work within the tree protection zone would be done by hand and using methods to ensure the safety of the trees to remain. Further evaluation in the NDD Plan EIR is not required.

Phase 1 would retain many existing trees in the northern segment of the site that would serve as a surface parking lot. Throughout the site, new tree plantings are proposed to highlight main walkways and provide canopy in the park and courtyard spaces. Approximately 105 existing trees would remain on the Phase 1 project site (1st and 2nd tier trees and palm trees) and up to 140 new trees would be planted. The 28 fan palms (*Washingtonia robusta*), primarily planted along Linden Street to mark a historic farm access drive, have been noted as iconic heritage trees by UC Riverside and would be protected within Linden Street improvements. In Phase 1, all tier 3 trees would be removed to eliminate those that are unhealthy and are invasive. Removal of trees could impact nesting birds. Similar to the NDD Plan analysis, **Mitigation Measures BIO-1** and **BIO-2** would be implemented to reduce any potential impact on nesting bird species to a less than significant level.

## **Mitigation Measures:**

### **Mitigation Measure BIO-1**

Prior to the onset of construction activities that would result in the removal of mature trees and would occur between March and mid-August, surveys for nesting special-status avian

species and raptors shall be conducted following the California Department of Fish and Wildlife (CDFW) guidelines. If no active avian nests are identified on or within 250 feet of the construction site, no further mitigation is necessary.

#### **Mitigation Measure BIO-2**

If active nests of special-status avian species or raptors are found within the construction footprint or within 250 feet of the construction site, exterior construction activities shall be delayed until the young have fledged or appropriate mitigation measures responding to the specific situation have been developed and implemented in consultation with CDFW.

- e. Pursuant to the University of California's constitutional autonomy, development and uses on property owned or controlled by the University that are in furtherance of the University's educational purposes are not subject to local land use regulation, including County and City General Plans or local ordinances for the protection of biological resources. Nevertheless, because of the developed condition of NDD Plan site, which includes the Phase 1 site, implementation of the NDD Plan, including the Phase 1 project, would not conflict with any policies for the protection of biological resources. Therefore, no impacts would occur and no further evaluation in the EIR is required.
- f. A Multiple Species Habitat Conservation Plan (MSHCP) was approved and adopted by Riverside County in 2003 as a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP) and Natural Communities Conservation Plan (NCCP) focusing on conservation of both species and habitats to address biological ecological diversity conservation needs in western Riverside County. A portion of the campus is included in the MSHCP but is not identified for conservation. The NDD Plan area, which includes the Phase 1 project site, is not within the portion of the campus that is included in the MSHCP. There would be no impact with respect to this criterion and no further evaluation in the NDD Plan EIR is required.

#### **CUMULATIVE IMPACTS:**

As discussed above, implementation of the NDD Plan, including the Phase 1 project, would not result in any impacts on special-status species or a natural community, it would not contribute to any cumulative impacts to special-status species and natural communities in the County. No further evaluation in the NDD Plan EIR is required. The NDD Plan would also not affect wildlife movement and therefore would not contribute to a cumulative impact on wildlife movement. The NDD Plan would have the potential to affect nesting birds. However, with the implementation of the mitigation measures set forth above, the project's impact would be rendered less than significant and its contribution to the cumulative impact on nesting birds would not be considerable. No further evaluation in the NDD Plan EIR is required.

<b>5.5 CULTURAL RESOURCES</b>		Impact to be Analyzed in the EIR	No Additional Analysis Required
<b>Would the project...</b>			
a)	Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d)	Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a) Two historic resource evaluations have been completed for the NDD Plan project site, including a Phase I Cultural Resources Assessment prepared by Psomas in March 2017, and a Historic Resource Evaluation Report for the Canyon Crest Family Housing Complex University of California – Riverside, Riverside County, CA by Daly & Associates in March 2017, both documents are included in Appendix C of this Initial Study.

The Canyon Crest Family Student Housing (CCFSH) complex, historically known as the Canyon Crest Housing complex, was constructed outside of the city limits of Riverside, by the U.S. Army Corps of Engineers in 1940-1941 in conjunction with the building of Camp Haan, just to the south in the Moreno Valley. Camp Haan was built as a preemptive measure to bolster defensive forces on the West Coast due to concerns of armed invasion by Japan. The residential housing complex was constructed for personnel of both Camp Haan and March Air Field. It was quickly occupied by military personnel and their families, but within just a year, the U.S. Army passed control of the property to the Federal Public Housing Authority. They, in turn with legislation passed in 1937 for the creation of public housing, assisted Riverside County in creating their own public housing authority and taking over responsibility for the management of the CCFSH complex. Housing Authority of the County of Riverside (HACR) managed the property day-to-day, and instituted social programs and activities that included a nursery school operated under the auspices of the Riverside City School District. HACR managed the property until 1954 when it was sold by an act of Congress to UC Riverside.

Under the criterion for evaluating the CCFSH complex for listing in the National Register or California Register for its association with events that have made a significant contribution to the broad patterns of history in the cultural heritage of Riverside County, California or the United States, the complex does not appear eligible for listing as a historical resource. The subject property was not found to have been directly associated with the military activities undertaken to protect the West Coast from an attack from Japan, or with the actual wartime training activities of March Air Field or Camp Haan. The CCFSH complex was located away from the military bases so that the residents could take advantage of the shopping, social, and educational resources available in the City of Riverside, which were severely lacking in the Moreno Valley area. The CCFSH complex merely played a supporting role in the war effort by providing housing for persons associated with the military bases. The CCFSH complex does not appear to meet the guidelines for listing in the California Register under Criterion 1 as a historical resource significant in the history of the region. The property does not appear to present the qualities

important to the nationwide history of “home front” activities of World War II, which would make the property eligible for listing in the National Register under Criterion A.

Under the criterion for evaluating properties for listing in the National Register or California Register for their association with the lives of persons important to the history of Riverside County, California, or the United States, the Canyon Crest Family Student Housing complex property does not appear eligible for listing in the National Register under Criterion B, or the California Register under Criterion 2. There is no evidence found that individuals or tenants associated with the property were persons identified as having a direct effect to history of the region, state, or nation.

Per the criterion for evaluating built-environment structures, it is apparent that the individual buildings of Canyon Crest Family Student Housing complex, and the complex as a whole, have not retained sufficient levels of integrity necessary to present the structural characteristics and features required to be a strong representative of a housing complex constructed by the U.S. Army Corps of Engineers in the days leading up to the entrance of the United States into World War II. The individual units were designed using a Minimalist and modest style of architecture that could be constructed as quickly and inexpensively as possible, even though it was to be a permanent residential community. Alterations made later to the individual units when owned by UC Riverside, substantially changed the residential units appearance by removing the original windows, changing the type of roof on the majority of the units, and adding decorative clapboard elements to the exterior facades where none had previously been placed. The property does not appear eligible for listing in the California Register under Criterion 3, or in the National Register under Criterion C, as an example of a World War II-era housing complex. The CCFSH complex has not retained the aspects of physical integrity that include design, setting, materials, workmanship, and feeling, that are required to be present to convey a properties historic significance.

The CCFSH complex has not yielded, nor does it appear to have the potential to yield, information important to the history of the local area, California or the nation. The property does not appear eligible for listing in the National Register under Criterion D, or the California Register under Criterion 4. Therefore, the Canyon Crest Family Student Housing complex is not eligible for inclusion on the CRHR or NRHP. Demolition of the buildings on the Canyon Crest Family Student Housing complex and construction under the NDD Plan, including the Phase 1 project, would not significantly impact historical resources. No further evaluation in the NDD Plan EIR is required.

- b-d)** The Eastern Information Center (EIC), located at UC Riverside, conducted a cultural resources records search and literature review for the NDD Plan site, which includes the Phase 1 project site, on February 2, 2017. The EIC is a designated branch of the California Historical Resources Information System and houses records regarding archaeological and historic resources in Riverside, Inyo, and Mono Counties. The review consisted of an examination of the U.S. Geological Survey’s (USGS’) Riverside East 7.5-minute quadrangle maps to determine if any sites are recorded on or if any cultural resources studies have been conducted on or within a one-mile radius of the study area. Data sources consulted at the EIC included archaeological records, Archaeological Determinations of Eligibility (DOE), historic maps, and the Historic Property Data File (HPDF) maintained by the Office of Historic Preservation (OHP). The HPDF contains listings for the NRHP and/or CRHR, California Historical Landmarks (CHL), and California Points of Historical Interest (CPHI).

While no evidence of prehistoric activity has been previously identified in the study area, nor was any evidence observed during the current survey, the NDD Plan site would be situated in an area traversed by Native American groups, as evidenced by sites located a short distance to the southwest. A field survey of the NDD Plan area, which includes the Phase 1 project site, was conducted on January 16, 2017. The field survey of the NDD Plan area did not result in the discovery of any archaeological resources. However, there is a potential to impact previously unknown archeological resources during earth-disturbing activities. In the case that an archaeological resource is discovered during construction, **Mitigation Measure CUL-1** below shall be implemented to reduce impacts to a less than significant level.

A paleontological records search was conducted at the Natural History Museum of Los Angeles County (NHMLAC) on January 5, 2017. The records search conducted at the NHMLAC indicated that the NDD Plan area, which includes the Phase 1 project site, was not sensitive for fossils at depths of less than ten feet. There is potential to impact previously unknown paleontological resources during earth-disturbing activities. However, LRDP PP 4.5-4 would continue to be implemented to reduce this impact to a less than significant level. Similarly, discovery of human remains could still occur during earth moving activities. With implementation of LRDP PP 4.5-5 would reduce the impact to human remains to a less than significant level.

### **Mitigation Measure:**

#### **Mitigation Measure CUL-1**

If an archaeological resource is discovered during construction, all soil-disturbing work within 100 feet of the find shall cease and the University Representative shall contact a qualified archaeologist meeting the Secretary of Interior standards within 24 hours of discovery to inspect the site. If a resource within the project area of potential effect is determined to qualify as a unique archaeological resource (as defined by CEQA), the University shall devote adequate time and funding to determine if it is feasible, through project design measures to preserve the find intact. If it cannot be preserved, the University shall retain a qualified non-University archaeologist to design and implement a treatment plan, prepare a report, and salvage the material, as appropriate. Any important artifacts recovered during monitoring shall be cleaned, catalogued, and analyzed, with the results presented in a report of finding that meets professional standards.

- a) If significant Native American cultural resources are discovered, as determined by the consulting archaeologist for which a Treatment Plan must be prepared, the developer, or his archaeologist shall immediately contact the University Representative. The University Representative shall contact the appropriate Tribal representatives.
- b) If requested by Tribal representatives, the University, the developer, or faith, consult on the discovery and its disposition (e.g., avoidance, preservation, return of artifacts to tribe).

### **CUMULATIVE IMPACTS:**

As discussed above, implementation of the NDD Plan, including the Phase 1 project, would not result in any impacts on historical resources. The NDD Plan would have the potential to affect archaeological resources, paleontological resources, and human remains. However, with implementation of LRDP PP 4.5-4 and 4.5-5, and **Mitigation Measure CUL-1** set forth above, the project's impact would be rendered less than significant and its contribution to the cumulative

impact on archaeological resources, paleontological resources, and human remains would not be considerable. No further evaluation in the NDD Plan EIR is required.

## 5.6 GEOLOGY and SOILS<sup>5</sup>

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:		
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

<sup>5</sup> In 2015, the California Supreme Court in *California Building Industry Association v. Bay Area Air Quality Management District (CBIA v. BAAQMD)* ruled that CEQA generally does not require a lead agency to consider the impacts of the environment on the future residents or users of the project. Specifically, the decision held that an impact of the existing environment on the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project, including future users and residents, exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. Thus, in accordance with Appendix G of the State CEQA Guidelines and the *CBIA v. BAAQMD* ruling, the project would have a significant impact related to exposure of project residents and structures to hazards related to geology and soils only if the project would exacerbate existing conditions.

## DISCUSSION:

- a.(i).** There are no active faults that cross the campus site and the campus site is not subject to significant seismic hazards (UCR 2005). Therefore, there are no faults that cross the NDD Plan area, which includes the Phase 1 project site. As a result there would be no risk of fault rupture. Implementation of the NDD Plan, including the Phase 1 project, would expose people and structures to potentially substantial adverse effects resulting from seismic ground shaking. However, it is anticipated that continued implementation of PP 4.6-1(a), PP 4.6-1(b), and PP 4.6-1(c) would ensure that the new buildings would be designed to be consistent with current seismic and geotechnical engineering practice to provide adequate safety levels, as defined in the California Code of Regulations and the University Policy on Seismic Safety. With implementation of PP 4.6-1(a), PP 4.6-1(b), and PP 4.6-1(c), this impact would be less than significant. No further analysis in the NDD Plan EIR is required.
- a.(ii).** The NDD Plan, which includes the Phase 1 project, would be implemented on the East Campus where soil erosion hazard mostly ranges from slight to moderate. Implementation of LRDP Planning Strategy Open Space 4, Planning Strategy Conservation 2, Planning Strategy Conservation 3, LRDP PP 4.6-2(a), and PP 4.6-2(b) would reduce the impact from substantial soil erosion or the loss of topsoil to a less than significant level. No septic tanks or alternative wastewater systems would be installed as part of development under the NDD Plan, which includes the Phase 1 project. No further analysis in the NDD Plan EIR is required.
- a.(iii).** Based on soils and depth to groundwater, the risk of liquefaction at the campus is low (UCR 2005). In addition, the risk of deep-seated landsliding is considered to be very low, even on natural slopes. In certain areas on the campus less dense strata and lenses of old alluvium are susceptible to collapse as well as the younger alluvium located near the University Arroyo. Fill material in many areas on the campus was deposited prior to the development of modern building codes. Therefore, the fill materials may exhibit great variability in their density and compressibility and may not be appropriate for the support of structures. In these instances the fill material would need to be recompacted or removed. The Riverside County Open Data geotechnical database maps the NDD Plan area, which includes the Phase 1 project, within a zone of low liquefaction hazard susceptibility (County of Riverside 2016). Furthermore, potential for liquefaction and liquefaction-related secondary effects to develop at the project site following a seismic event is negligible, due to deep groundwater conditions (Haley & Aldrich 2017). No impacts from project implementation would occur. No further analysis in the NDD Plan EIR is required.
- a.(iv).** The NDD Plan area, including the Phase 1 project site, and the surrounding area are characterized by relatively flat topography and therefore would not be subject to landslides. No impact would occur and no further analysis in the NDD Plan EIR is required.
- b.** Development under the NDD Plan, including the Phase 1 project, would be constructed on the East Campus where erosion hazard ranges from slight to moderate. Implementation of LRDP Planning Strategy Open Space 4, Planning Strategy Conservation 2, Planning Strategy Conservation 3, LRDP PP 4.6-2(a), and PP 4.6-2(b) would reduce the potential impact from substantial soil erosion or the loss of topsoil to a less than significant level. Further analysis in the NDD Plan EIR is not required.

- c. Issues related to seismically induced and non-seismic landslide hazards are discussed in the response to **Item (a)(iv)**, above. Issues related to liquefaction and related hazards are discussed in the response to **Item (a)(iii)**, above. Issues related to soil properties are discussed in the response to **Item (d)**, below. No further analysis in the NDD Plan EIR is required.
- d. Most of the soils on the campus have low to moderate shrink-swell characteristics, the potential for water uptake after rainfall to cause soils to expand and damage building foundations is considered low (UCR 2005). Soils on the East Campus generally have low shrink-swell potential. Development under the NDD Plan, including the Phase 1 project, would include the implementation of existing campus programs and practices, such as PP 4.6-1(a). In addition, the projects would be required to comply with applicable provisions of the CBC. Thus, development under the NDD Plan, including the Phase 1 project, would not result in structures being located on expansive soil, creating substantial risks to life or property, and this impact would be less than significant. No further analysis of this issue is required in the NDD Plan EIR.
- e. No septic tanks or alternative wastewater disposal systems are included in the proposed project, therefore no impact would occur. No further analysis in the NDD Plan EIR is required.

#### **CUMULATIVE IMPACTS:**

The impacts of the NDD Plan associated with exposing people and property to ground shaking effects, as well as the effects of soil characteristics associated with differential settlement, liquefaction, and unstable soils would not be significant. Therefore, the NDD Plan would not contribute to any significant cumulative impacts related to geology and soils. No further analysis in the NDD Plan EIR is required.

<b>5.7 GREENHOUSE GAS EMISSIONS</b>		
Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose or reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**DISCUSSION:**

- a., b.** Development of facilities under the NDD Plan, including the Phase 1 project, would generate GHG emissions associated with construction, mobile, and area sources. Proposed development would incorporate sustainable design features. However, this impact is still considered potentially significant, and this issue will be further analyzed in the EIR. In addition, the NDD Plan EIR will evaluate the potential for development within the NDD Plan area, including the Phase 1 project, to conflict with any applicable plan, policy or regulation adopted for the purpose of reducing GHG emissions.

**CUMULATIVE IMPACTS:**

The impact of a project’s GHG emissions is essentially a cumulative effect. Potential GHG emissions impacts will be addressed in the NDD Plan EIR.

## 5.8 HAZARDS & HAZARDOUS MATERIALS<sup>6</sup>

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

<sup>6</sup> In 2015, the California Supreme Court in *California Building Industry Association v. Bay Area Air Quality Management District (CBIA v. BAAQMD)* ruled that CEQA generally does not require a lead agency to consider the impacts of the environment on the future residents or users of the project. Specifically, the decision held that an impact of the existing environment on the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project, including future users and residents, exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. Thus, in accordance with Appendix G of the State CEQA Guidelines and the *CBIA v. BAAQMD* ruling, the project would have a significant impact related to exposure of project residents to hazards only if the project would exacerbate existing conditions.

## DISCUSSION:

- a. Construction activities under the NDD Plan would involve the use of various products that could contain hazardous materials (such as solvents, adhesives, cements, paints, cleaning agents, degreasers, and fuels used in construction vehicles). Planned development under the NDD Plan would consist of student housing and support spaces, mixed-use student housing, dining facilities, and athletic facilities. Operation of these facilities would also involve hazardous materials, including general maintenance and landscaping. In addition, soil or groundwater contamination could be present at areas that could be developed under the NDD Plan. Development of contaminated sites could potentially expose campus occupants and construction workers to hazardous materials. The NDD Plan EIR will characterize hazardous materials transport, use, and disposal associated with the development under the Plan. The NDD Plan EIR will also identify potentially contaminated sites within the Plan area and will address potential impacts associated with development of contaminated sites.

The Phase 1 project analysis will evaluate the potential risks associated with hazardous materials and the potential for project site contamination.

- b. There are no existing or proposed public schools within one-quarter mile of the NDD Plan area, including the Phase 1 project site. However, the UC Riverside Child Development Center is located immediately adjacent to the NDD Plan area. Although the proposed NDD Plan development would handle hazardous materials and wastes, as described above, operations would comply with federal, State, and local regulations pertaining to hazardous wastes, as well as the procedures required by PP 4.7-1. Adherence to these regulations and policies, which require proper handling techniques, disposal practices, and/or clean-up procedures, would ensure that risks associated with hazardous emissions or materials to the UC Riverside Child Development Center would be eliminated or reduced. Therefore, implementation of NDD Plan would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school, and this impact would be less than significant. However, in order to provide additional information and analysis, this impact will be further addressed in the NDD Plan EIR. Potential impacts related to toxic air emissions will be discussed in the NDD Plan EIR as part of the Air Quality analysis.
- d. The NDD Plan area, which includes the Phase 1 project, is not located on properties associated with a hazardous site listed under Government Code Section 65962.5, also known as the Cortese List (Envirostor 2018). As a result, development under the NDD Plan, including the Phase 1 project, would not create a significant hazard to the public or the environment and no impact would occur. Further analysis in the NDD Plan EIR is not required.
- e., f. The UC Riverside campus is not located within two miles of a public airport or public use airport, and is not included in an airport land use plan (UCR 2005). The closest airports to the UC Riverside campus are Flabob Airport, which is located approximately four miles to the west, and March Air Reserve Base, which is located approximately six miles to the southeast. Therefore, development under the NDD Plan, including the Phase 1 project, would not be located within two miles of a public airport or public use airport, and the Plan area is not included in an airport land use plan. No impact would occur. Further analysis in the NDD Plan EIR is not required.

- g.** The NDD Plan, including the Phase 1 project site, is not located within areas that are currently identified as emergency assembly areas (UCR 2016). However, development within the NDD Plan could result in lane or roadway closures which may impact adequate access for emergency vehicles. Therefore, development under the NDD Plan, including the Phase 1 project, may have the potential to physically interfere with the campus Emergency Action Plan (EAP). The NDD Plan EIR will characterize the campus' emergency response plans and capabilities, and it will assess the effects of development under the NDD Plan on the campus' ability to respond to emergencies. The NDD Plan EIR will also address the potential for the Phase 1 project to impair implementation of, or interfere with, the EAP.
- h.** The southeast hills may be susceptible to wildland fires. The NDD Plan area, which includes the Phase 1 project, is not located adjacent to the southeast hills that pose a high risk for wildland fires. Therefore, the proposed NDD Plan would not place people or structures at risk from wildland fires and there would be no impact. Further analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not locate development on or near hazardous material sites, within two miles of a public airport, public use airport, or private airship, and would not place people or structures at risk from wildland fires. Therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to these topics and further analysis in the NDD Plan EIR is not required.

All other potential cumulative hazard and hazardous materials impacts for all other topics will be addressed in the NDD Plan EIR.

<b>5.9 HYDROLOGY &amp; WATER QUALITY</b>		Impact to be Analyzed in the EIR	No Additional Analysis Required
Would the project...			
a)	Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e)	Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f)	Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g)	Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h)	Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i)	Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j)	Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a., f.** The facilities that would be developed under the NDD Plan, including the Phase 1 project, would be substantially similar to existing campus uses which would not contribute different types of storm water pollutants than those generated currently. Furthermore, development under the NDD Plan, including the Phase 1 project, would comply with the NPDES Phase I and Phase II requirements which would ensure that campus stormwater quality is not substantially degraded. Additionally, LRDP Planning Strategy Conservation 2 and PP 4.8-1 would be implemented to reduce impacts to water quality. Therefore, development under the NDD Plan, including the Phase 1 project, would have a less than significant impact on water quality. Further analysis in the NDD Plan EIR is not required.

- b. Development under the NDD Plan, including the Phase 1 project, would modestly decrease the amount of impervious areas and would therefore not interfere with groundwater recharge. The increase in occupied building space would increase demand for potable water that could indirectly increase demand for groundwater, as the campus is supplied domestic water by the City of Riverside, which utilizes groundwater wells for potable water. However, development under the NDD Plan would implement LRDP PP 4.8-2(a) through PP 4.8-2(c) to promote conservation measures that would reduce demand for potable water. In addition, LRDP Planning Strategy Conservation 5 would be implemented which requires compliance with Title 24 requirements, which includes the California Plumbing Code and its water conservation measures. Consequently, implementation of the NDD Plan, including the Phase 1 project, would not substantially deplete groundwater supplies, and the NDD Plan project would have a less than significant impact to groundwater supplies and groundwater recharge. Further analysis in the NDD Plan EIR is not required.
- c. Within the majority of the East Campus, soil erosion hazards range from slight to moderate. Construction activities under the NDD Plan, including the Phase 1 project, could result in erosion but the impact would be temporary. The National Pollution Discharge Elimination System (NPDES) permits require that planned projects within the NDD Plan, including the Phase 1 project, develop and implement a SWPPP, including control measures (or Best Management Practices) to control erosion and release of sediment and other pollutants from the NDD Plan area or Phase 1 project site. Furthermore, LRDP Planning Strategy Conservation 2, LRDP Planning Strategy Conservation 3, LRDP PP 4.8-3(c), PP 4.8-3(d), and PP 4.8-3(e) would be implemented as part of the development under the NDD Plan and the Phase 1 project. Therefore, development under the NDD Plan, including the Phase 1 project, would have a less than significant impact related to soil erosion. No further evaluation of impacts in the NDD Plan EIR is required.
- d., e. As described above, the NDD Plan would decrease the amount of impervious areas and the project would include stormwater detention features throughout which would increase percolation and reduce runoff. Therefore, runoff from the site would not increase compared to existing conditions and the NDD Plan would have a less than significant impact to surface runoff and flooding. Similarly, the Phase 1 project would decrease the amount of impervious areas, and runoff from the site would not increase compared to existing conditions. Therefore, the Phase 1 project would have a less than significant impact to surface runoff and flooding. No further evaluation in the NDD Plan EIR is required.
- g. The NDD Plan area, including the Phase 1 project site, is not within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map. No impact would occur. No further evaluation in the NDD Plan EIR is required.
- h. As discussed above under **Item (g)**, the NDD Plan area, including the Phase 1 project site, is not within a 100-year flood hazard area. No impact would occur. No further evaluation in the NDD Plan EIR is required.
- i., j. The Prado Dam, the nearest dam to the campus, is located on the Santa Ana River downstream of the campus. The nearest upstream dam is Seven Oaks Dam. The potential for catastrophic failure of the Seven Oaks Dam is considered remote (UCR 2005). Therefore, development under the NDD Plan, including the Phase 1 project, is unlikely to experience inundation from dam failure, mudflow, seiche, or tsunami. There would be no impact with regard to these criteria. No further evaluation in the NDD Plan EIR is required.

**CUMULATIVE IMPACTS:**

All impacts of the NDD Plan associated with hydrology and water quality would not be significant. Therefore, the NDD Plan would not contribute to any significant cumulative impacts related to hydrology and water quality. No further analysis in the NDD Plan EIR is required.

<b>5.10 LAND USE &amp; PLANNING</b>		
Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Physically divide an established community?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a. Development under the NDD Plan, including the Phase 1 project, would be located on the East Campus in an area surrounded by existing student housing, dining facilities, athletic facilities, and parking lots. Implementation of the NDD Plan, including the Phase 1 project, would not physically divide an established community. Further analysis in the NDD Plan EIR is not required.
- b. As a state entity, UC Riverside is not subject to regional or local land use controls. The 2005 LRDP is the land use plan that is applicable to the UC Riverside campus. Although the development under the NDD Plan is outside the scope of the 2005 LRDP, the Campus has designed the NDD Plan to be generally consistent with the 2005 LRDP; however, as some changes are being made to the existing land use designations under the NDD Plan, an LRDP Amendment is required. The NDD Plan EIR will analyze consistency with the 2005 LRDP land use plan and policies.
- c. As discussed above under Biological Resources, the NDD Plan area, which includes the Phase 1 project site, is not within the portion of the campus that is included in the MSHCP. There would be no impact with respect to this criterion. Further analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not physically divide an established community or conflict with any applicable habitat conservation plan or natural community conservation plan. Therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to these two topics and further analysis in the NDD Plan EIR is not required.

Potential cumulative impact related to conflicts with any applicable land use plan, policy, or regulation will be addressed in the NDD Plan EIR.

**5.11 MINERAL RESOURCES**

Would the project...

Impact to be Analyzed in the EIR

No Additional Analysis Required

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

**a., b.** The NDD Plan area, which includes the Phase 1 project site, is not designated as a mineral resource zone, and no known or potential mineral resources are located on the campus. No impacts would occur. Further analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

No mineral resource zones or mineral resource recovery sites exist on the campus or its environs. Development under the NDD Plan EIR, including the Phase 1 project, would not contribute to a cumulative impact on mineral resources. Further analysis in the NDD Plan EIR is not required.

<b>5.12 NOISE</b>		Impact to be Analyzed in the EIR	No Additional Analysis Required
Would the project...			
a)	Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f)	For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a. Development under the NDD Plan, including the Phase 1 project, could result in increases or changes in noise levels from sources such as construction activities, stationary sources, and increased vehicular traffic, which could exceed applicable noise standards. The impact is considered potentially significant. The NDD Plan EIR will evaluate the potential for development under the NDD Plan to increase noise levels and expose people to noise levels in excess of local standards. The NDD Plan EIR will also include project-specific analyses of noise effects associated with the proposed Phase 1 project.
- b. Demolition and construction activities proposed under the NDD Plan and the Phase 1 project would generate perceptible groundborne vibration levels when heavy equipment or impact tools are used. Structures and residents in the proximity of the Plan area, and the Phase 1 project site, could be adversely affected by vibration generated during construction. The NDD Plan EIR will examine the potential for increased groundborne vibration or noise levels associated with development under the NDD Plan. The effects of specific construction practices will be evaluated. The NDD Plan EIR will also include project-specific analyses of potential effects associated with groundborne vibration or noise levels associated with specific development of the Phase 1 project.
- c. Vehicle traffic associated with the proposed project could result in a substantial permanent increase in ambient noise levels along affected roadways. The impact is considered potentially significant. The NDD Plan EIR will analyze permanent increases in ambient noise levels caused by increase in traffic (if any) from the implementation of the NDD Plan, and it will examine permanent noise increases caused specifically from the implementation of the proposed Phase 1 project.

- d. Construction activities associated with the NDD Plan and the Phase 1 project could result in substantial temporary increases in ambient noise levels in the vicinity of the NDD Plan area and the Phase 1 project site. The impact is considered potentially significant. The NDD Plan EIR will examine the potential for construction activities, special events, and operation of emergency vehicles or other operations under the NDD Plan to increase ambient noise levels. The NDD Plan EIR will also analyze temporary or periodic increases in ambient noise levels caused by implementation of the proposed Phase 1 project.
- e., f. The NDD Plan area, which includes the Phase 1 project site, is not located within an airport land use plan study area, nor is it within two miles of a public airport or the vicinity of a private airstrip (UCR 2011). Therefore, implementation of the NDD Plan and the Phase 1 project would not expose people residing or working in the area to excessive noise levels. Further analysis in the NDD Plan EIR is not required.

#### **CUMULATIVE IMPACTS:**

As discussed above, the NDD Plan, including the Phase 1 project, is not located within an airport land use plan study area, nor is it within two miles of a public airport or the vicinity of a private airstrip; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to these topics and further analysis in the NDD Plan EIR is not required.

All other potential cumulative noise impacts for all other topics will be addressed in the NDD Plan EIR.

<b>5.13 POPULATION AND HOUSING</b>		
Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**DISCUSSION:**

- a. The proposed NDD Plan would provide additional on-campus housing for students to respond to existing and projected enrollment. The NDD Plan EIR will further evaluate whether the NDD Plan would induce substantial population growth directly or indirectly, including whether population growth would occur as part with the proposed Phase 1 project.
- b., c. The existing Canyon Crest Family Student Housing Facility is currently vacant and has been since the Summer of 2017. Therefore, implementation of the NDD Plan would not displace housing or people and no impact would occur. Further analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not displace housing or people; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to these topics and further analysis in the NDD Plan EIR is not required.

The cumulative impact related to potential to induce substantial population growth directly or indirectly will be addressed in the NDD Plan EIR.

## 5.14 PUBLIC SERVICES

Would the project...

Impact to be Analyzed in the EIR	No Additional Analysis Required
----------------------------------	---------------------------------

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Police protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Schools?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Parks?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
v) Other public facilities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### DISCUSSION:

- a.(i).** Development under the NDD Plan, including the Phase 1 project, would add building space to the campus and increase the number of students living on campus, which would increase the campus's demand for fire protection services. The NDD EIR will evaluate this increased demand, compare this demand to existing and planned equipment and staffing levels, and will evaluate potential environmental impacts associated with any new or altered facilities that would be required to meet this demand.
- a.(ii).** Development under the NDD Plan, including the Phase 1 project, would increase the number of students residing on the campus, which would increase the campus's demand for police services. The NDD Plan EIR will evaluate this increased demand, compare this demand to existing and planned police staffing levels, and will evaluate potential impacts associated with any new or altered facilities that would be required to meet this demand.
- a.(iii).** The NDD Plan, including the Phase 1 project, would not provide housing for families with school-age children that would attend local schools. There would be no impact on local schools. Further analysis in the NDD Plan EIR is not required.
- a.(iv).** Development under the NDD Plan, including the Phase 1 project, would increase the on-campus population, which could increase demand for parks. The NDD Plan EIR will evaluate this increased demand and will evaluate potential impacts associated with any new or altered facilities that would be required to meet this demand. In addition, the NDD Plan would evaluate the potential impacts from construction of the planned athletic facilities under the NDD Plan. The NDD Plan EIR will include project-specific analyses of potential environmental effects that could result from construction of the Phase 1 project.
- a.(v).** Although development under the NDD Plan, including the Phase 1 project, would increase the number of students that would live on campus, the additional students that would live on-campus would be served by campus libraries, and an expansion of libraries would not be needed. There would be no impact. Further analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not impact local schools or libraries; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to these topics and further analysis in the NDD Plan EIR is not required.

All other potential cumulative public service impacts for all other topics will be addressed in the NDD Plan EIR.

<b>5.15 RECREATION</b>	Impact to be Analyzed in the EIR	No Additional Analysis Required
<b>Would the project...</b>		
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**DISCUSSION:**

- a. UC Riverside maintains a variety of indoor and outdoor recreational facilities. The NDD Plan, including the proposed Phase 1 project, would increase the on-campus population. As adequate recreational facilities would be provided on the campus, the increased on-campus population due to the proposed project would not increase the use of neighborhood and regional parks such that substantial physical deterioration of the facilities would occur or be accelerated. Further analysis in the NDD Plan EIR is not required.
- b. The proposed NDD Plan provides for the construction an athletic facility on campus. The NDD Plan EIR will include a program-level analysis of the potential effects of development under the NDD Plan, and it will analyze the potential environmental effects associated with construction of the athletic field. The Phase 1 project does not include construction of any recreational facilities. Further project-level analysis in the NDD Plan EIR is not required.

**CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not result in substantial physical deterioration of neighborhood and regional recreational facilities; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to this topic and further analysis in the NDD Plan EIR is not required.

The potential cumulative impact from the development of recreational facilities under the NDD Plan will be addressed in the NDD Plan EIR.

## 5.16 TRANSPORTATION & TRAFFIC

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards established by the county congestion management agency for designated roads and highways?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### DISCUSSION:

- a, b** Provision of on-campus housing under the NDD Plan would have the potential to reduce daily and peak hour trips to the campus compared to both existing conditions as well as No Project conditions. The NDD Plan EIR will include a detailed evaluation of the changes in traffic under the NDD Plan. The scope of the traffic analysis will include a detailed evaluation of trip generation due to the project, and if an increase in peak hour trips due to the project is indicated, the traffic analysis will analyze impacts on study intersections, freeway ramp intersections, freeway interchanges, and vehicle miles of travel (VMT). The analysis will estimate the traffic conditions with full implementation of the proposed NDD Plan and with traffic increases caused by other regional growth. The regional growth projections will be based on the RIVTAM regional traffic model. The NDD Plan EIR will evaluate the project-specific traffic impacts that could result from implementation of the Phase 1 project.
- c.** The closest airports to the campus are Flabob Airport, which is located approximately four miles to the west, and March Air Reserve Base, which is located approximately six miles to the southeast. Development under the NDD Plan, including the Phase 1 project, would also not result in a change in air traffic patterns or an increase in air traffic levels, as the Plan area is not located within two miles of the nearest airport, or within the airport land use plan study area for either the Flabob Airport or the March Air Reserve Base, and no impact would occur. No further analysis in the NDD Plan EIR is required.

- d. The NDD Plan, which includes the Phase 1 project, would include alterations to roadways that could produce hazardous design features. The NDD Plan EIR will evaluate potential hazards caused by design features or incompatible roadway uses under the NDD Plan, and it will evaluate the potential for project-specific hazards associated with the proposed Phase 1 project.
- e. Implementation of the NDD Plan, which includes the Phase 1 project, could affect emergency access by causing roadway changes that could hinder emergency access. The NDD Plan will evaluate potential program-level impacts to emergency access and will evaluate project-specific emergency access for the proposed Phase 1 project.
- f. The NDD Plan EIR will analyze any adopted policies, plans, or programs regarding alternative transportation that are applicable to the campus in order to determine if the NDD Plan, including the Phase 1 project, would conflict with those plans. The NDD Plan EIR will evaluate the potential effects of implementing the NDD Plan and the project-specific effects associated with the proposed Phase 1 project.

#### **CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan would not result in a change in air traffic patterns; therefore, campus development under the NDD Plan would not contribute to cumulative effects with regard to this topic.

All other potential cumulative transportation and traffic impacts for all other topics will be addressed in the EIR.

## 5.17 TRIBAL CULTURAL RESOURCES

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### DISCUSSION:

- a., b. Assembly Bill (AB) 52, which came into effect on July 1, 2015, requires that lead agencies consider the effects of projects on tribal cultural resources and conduct notification and consultation with federally and non-federally recognized Native American tribes early in the environmental review process. The Campus has obtained a Sacred Lands File search from the Native American Heritage Commission. Pursuant to AB 52, the Campus sent out notification letters to all tribes that have requested notifications from the UC Riverside campus. The letters were sent, receipt requested on March 22, 2018: the Agua Caliente Band of Cahuilla Indians, the Soboba Band of Luiseno Indians, and the Torres-Martinez Desert Cahuilla Indians.<sup>7</sup> According to AB 52, the tribes had 30 days from the receipt of the letter to request consultation with UC Riverside. On April 2, 2018, Katie Croft, Cultural Resources Manager, representing the Agua Caliente Band of Cahuilla Indians, Tribal Historic Preservation Office, responded to the notification letter stating that they did not require consultation. No other requests for formal consultation have been received by UC Riverside from the other two tribes as of the publication of this Initial Study.

The area of disturbance for the NDD Plan area, which includes the Phase 1 project, is not known or expected to contain any TCRs. As noted in **Section 5.5** above, earthmoving activities associated with the proposed NDD Plan, including the Phase 1 project, could expose previously undiscovered buried archaeological resources, including human remains, which could be considered TRCs and could be adversely affected by the project construction. The impact would be considered potentially significant. However, LRDP PP 4.5-4, and **Mitigation Measure CUL-1** would be implemented to ensure that should cultural resources be encountered, they would be protected, documented, and preserved, as appropriate. If human remains are uncovered and are determined to be of Native American origin, the Campus will implement the procedures set forth in LRDP PP 4.5-5 for protection of the remains, documentation, and respectful treatment in

<sup>7</sup> Copies of the correspondence are included as Appendix D to this Initial Study.

consultation with a Native American Most Likely Descendant. Therefore, while no TCRs are expected to be affected by the implementation of the NDD Plan, including the Phase 1 project, these measures would ensure that any previously unknown TCRs encountered during ground disturbing activities associated with the NDD Plan, which includes the Phase 1 project, would not be adversely affected.

#### CUMULATIVE IMPACTS:

As discussed above, implementation of the NDD Plan would have the potential to affect TCRs. However, with implementation of LRDP PP 4.5-4, LRDP PP 4.5-5, and **Mitigation Measure CUL-1**, the project's impact would be rendered less than significant and its contribution to the cumulative impact on TCRs would not be considerable. No further evaluation in the NDD Plan EIR is required.

## 5.18 UTILITIES & SERVICE SYSTEMS

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the providers existing commitments?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### DISCUSSION:

- a. Wastewater generated on the project site would be conveyed to and treated at Riverside Regional Water Quality Control Plant (RRWQCP). The NDD Plan, including the Phase 1 project, would increase the volume of wastewater received at the RRWQCP for treatment. Although development under the NDD Plan, including the Phase 1 project, is not expected to cause the RRWQCP to exceed wastewater treatment requirements, this potential impact will be evaluated in the NDD Plan EIR.
- b. Increase in on-campus population under the NDD Plan would increase the volume of water use and the quantity of wastewater discharged to the RRWQCP. The NDD Plan EIR will evaluate the increased demand for water and wastewater treatment and conveyance facilities due to the NDD Plan and it will evaluate potential impacts associated with any new or expanded facilities that would be required to meet this demand. The NDD Plan EIR will also address the project-specific water and wastewater conveyance improvements needed to serve the proposed Phase 1 project.
- c. The NDD Plan would decrease the amount of impervious areas and runoff from the site would not increase compared to existing conditions and improvements to off-campus storm drain systems would not be required. The development of the NDD Plan would require the installation of additional storm drain improvements within the Plan area. The new infrastructure would be

installed in portions of the project site that are already disturbed, and connections to existing stormwater lines would be located on campus. The potential environmental effects associated with the construction of the new storm drain systems would be less than significant. No further evaluation of this issue in the EIR is necessary.

- d. Development under the NDD Plan, including the Phase 1 project, could increase demand for water supplies. The NDD Plan EIR will characterize existing and projected water supplies, evaluate anticipated increases in demand, and determine if this demand could result in new or expanded entitlements.
- e. The NDD Plan EIR will evaluate the increased demand on wastewater treatment and conveyance facilities associated with the proposed Phase 1 project.
- f., g. Nonhazardous municipal waste from the campus is handled by Burrtec Waste Industries. The waste is sent to the Badlands Landfill. The NDD EIR will evaluate whether the existing landfill capacity would be sufficient to accommodate development under the NDD Plan, including implementation of the Phase 1 project. In addition, the NDD Plan EIR will evaluate compliance with federal, state, and local statutes and regulations related to solid waste disposed under the NDD Plan, including solid waste disposal associated with the proposed Phase 1 project.

#### **CUMULATIVE IMPACTS:**

As discussed above, campus development under the NDD Plan, including the Phase 1 project, would not require or result in the construction of new storm water drainage facilities or expansion of existing facilities; therefore, campus development under the NDD Plan, including the Phase 1 project, would not contribute to cumulative effects with regard to this topic and further analysis in the NDD Plan EIR is not required.

Potential cumulative impacts related to wastewater, water supply, and solid waste will be addressed in the NDD Plan EIR.

**5.19 MANDATORY FINDINGS OF SIGNIFICANCE**

Would the project...	Impact to be Analyzed in the EIR	No Additional Analysis Required
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**DISCUSSION:**

- a. Development under the NDD Plan, including the Phase 1 project, would not affect fish or wildlife habitat, populations, communities, or ranges (see Biological Resources responses [a] through [f]). Implementation of the NDD Plan, including the Phase 1 project, would not eliminate important examples of the major periods of California history or prehistory (see Cultural Resources responses [a] through [d]). Further analysis in the NDD Plan EIR is not required.
- b. Cumulative impacts for each environmental factor are addressed in the preceding sections. As that discussion shows, development under the proposed NDD Plan could result in significant cumulative impacts with regard to Aesthetics, Air Quality, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Noise, Population and Housing, Population and Housing, Public Services, Recreation, Transportation/Traffic, and Utilities and Services Systems. These impacts will be evaluated in the NDD Plan EIR.
- c. As indicated in the discussions above, implementation of the NDD Plan, including the Phase 1 project, has the potential to result in significant impacts. The NDD Plan EIR will evaluate whether any of those impacts have the potential to result in substantial adverse effects on human beings either directly or indirectly.

## **VII. REPORT PREPARERS**

### **University of California, Riverside**

Tricia D. Thrasher, ASLA, LEED AP, Principal Environmental Planner

### **Impact Sciences, Inc.**

Shabnam Barati, Ph.D., Principal  
Lynn Kaufman, Associate Principal  
Angela Pan, Project Manager  
Kara Yates, Publications Manager

**NOTICE OF PREPARATION  
ENVIRONMENTAL IMPACT REPORT**

**Project Title:** North District Development Plan  
**Lead Agency:** University of California  
**Project Location:** **University of California, Riverside (UC Riverside)**  
900 University Ave, Riverside, CA 92521  
**County:** Riverside County

**Contact Person:** Ms. Tricia D. Thrasher, ASLA, LEED AP  
Principal Environmental Planner  
Campus Planning – Capital Asset Strategies  
1223 University Avenue, Suite 240  
Riverside, California 92521

The proposed North District Development Plan (NDD Plan) is a plan put forth by UC Riverside to provide up to 6,000 student beds on the East Campus on an approximately 55-acre site located in the northeastern portion of the campus. The NDD Plan includes Phase 1 which involves the construction of about 1,500 student beds and associated facilities by 2020 and a future phase(s) which involves the construction of up to 4,500 student beds and associated facilities between 2020 and 2024/5. The project site is developed with Canyon Crest Family Student Housing that was occupied by student families until 2017 and is currently vacant. The site is designated for Family, Apartments, and Residence Hall student housing and Related Support, and Athletics and Recreation in the UC Riverside 2005 Long Range Development Plan. Furthermore, as a student housing project, the proposed project would support current and projected enrollment on the campus.

At this time, project-level details are available only for Phase 1 development. With respect to the future phase(s) of development, the NDD Plan provides a development program and a land use diagram, but does not have details with respect to specific buildings. The project would require approval by the Board of Regents of the University of California.

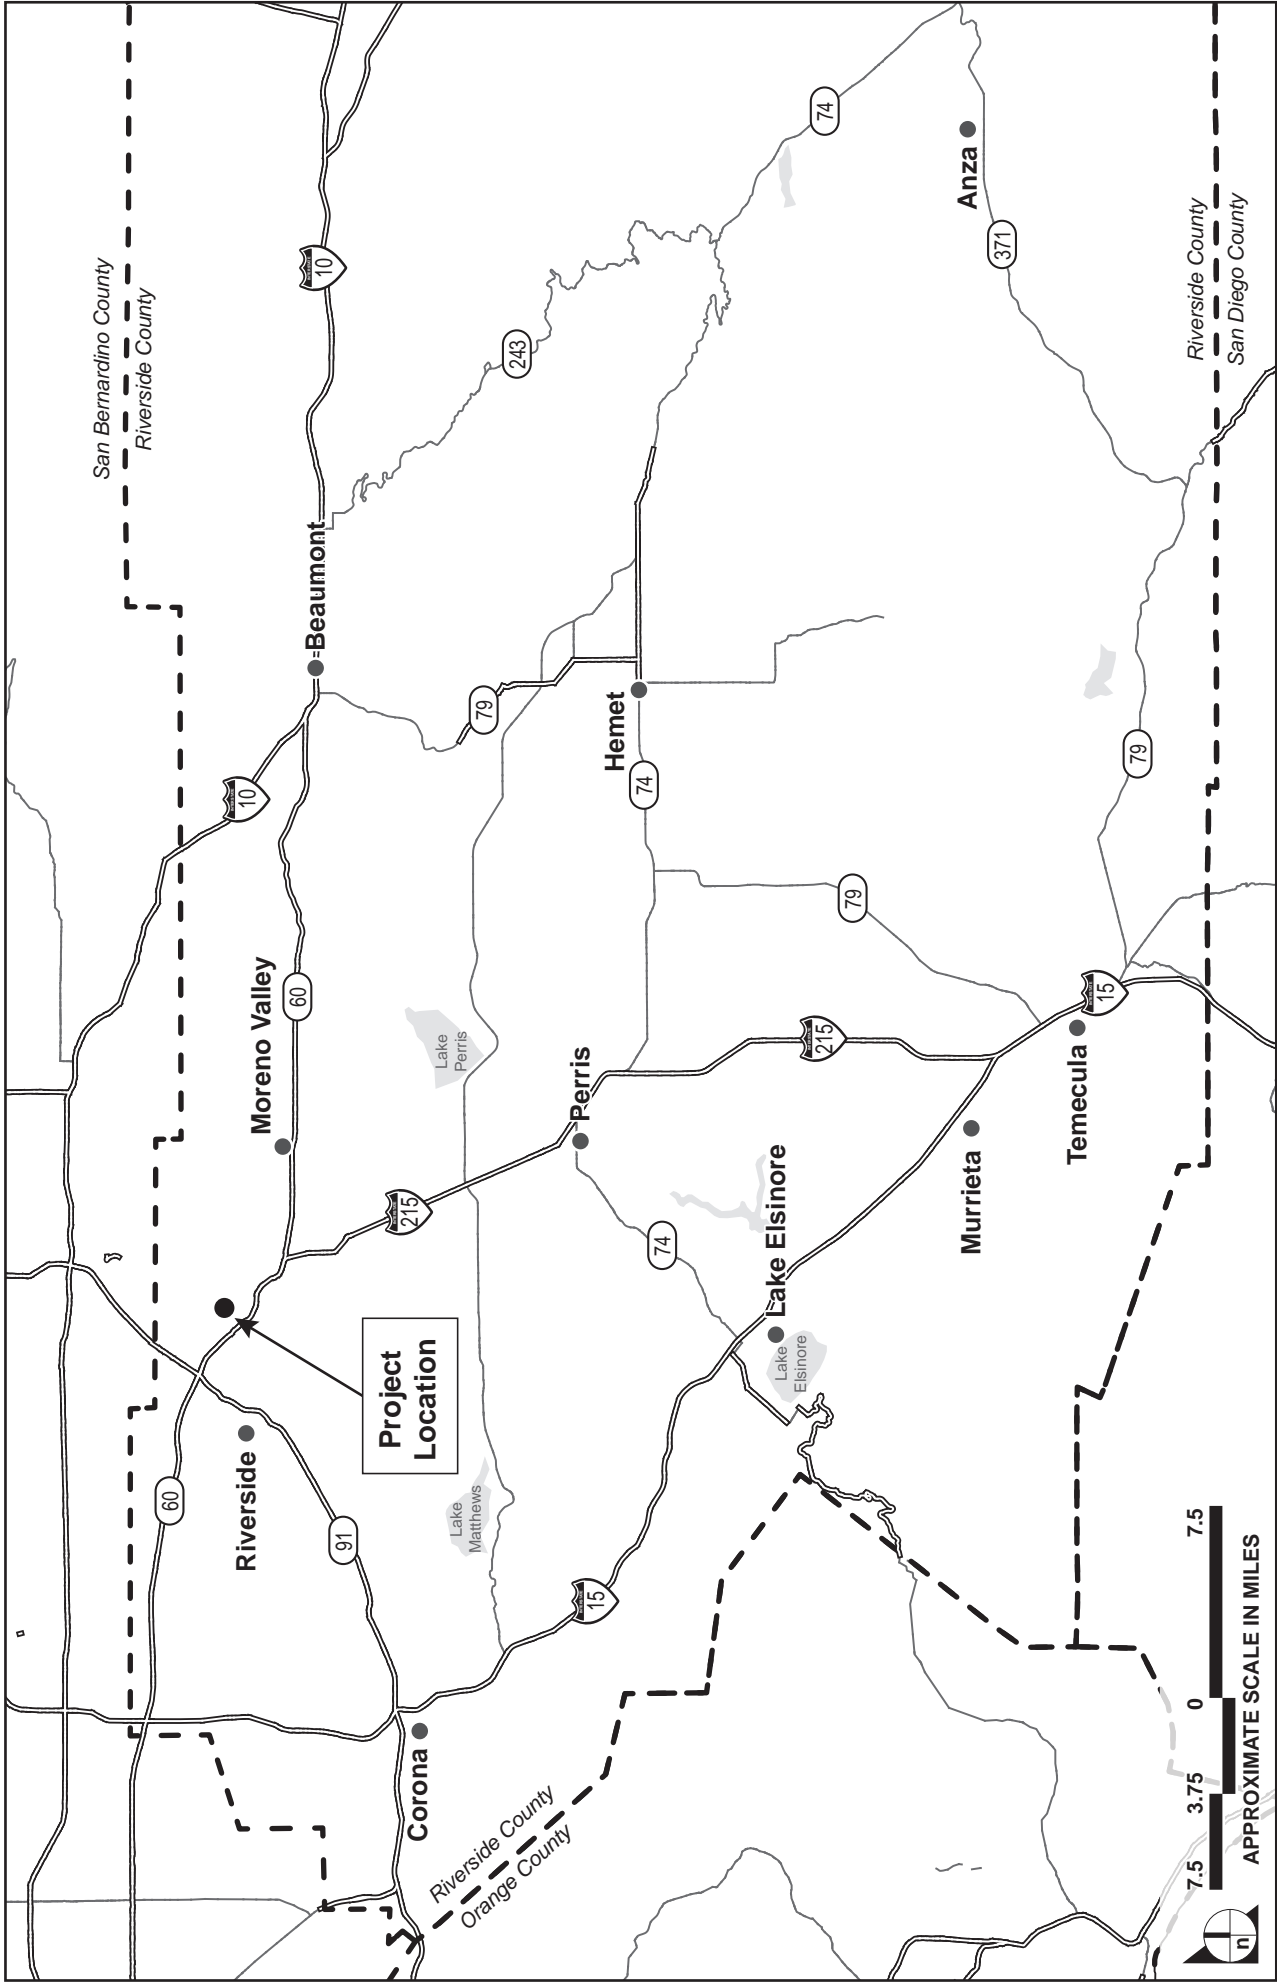

**Environmental Review and Comment**

The University of California will be the Lead Agency and will prepare an EIR for the proposed project. An Initial Study has been prepared in accordance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines to identify potential environmental impacts that will be addressed in the EIR. The Initial Study also includes a description of the proposed project. At this time, it is anticipated that the EIR will address environmental impacts in the following resource areas: aesthetics, air quality, cultural resources, greenhouse gas emissions, hazards and hazardous materials, land use and planning, noise, population and housing, public services and recreation, transportation and traffic, tribal cultural resources, utilities, and energy. A copy of this NOP and the Initial Study supporting the scoping of the project EIR is available for viewing or downloading on the Capital Asset Strategies - Campus Planning website at <http://cpp.ucr.edu/environmental/ceqadocs.html>.

The University will hold a public scoping meeting on Tuesday, July 3, 2018 for the EIR. The meeting will be held at University Village Suite 210 located at 1223 University Avenue, from 5:30 PM to 7:30 PM.

We request your views as to the scope and contents of the EIR for the proposed project. This NOP is being circulated for 30 days from June 19 through July 20, 2018. Your comments must be received no later than 5:00 PM on July 20, 2018. Your name should be included with your comments. Please send your comments to the attention of Tricia D. Thrasher at the address noted above. Comments can also be submitted via email to the following address: [CEQA@ucr.edu](mailto:CEQA@ucr.edu). **Email comments must also be received no later than 5:00 PM on July 20, 2018.**

If you have any questions regarding this NOP, please contact Tricia D. Thrasher at the above address or via email at [CEQA@ucr.edu](mailto:CEQA@ucr.edu).

To: Reviewing Agencies  
Re: North District Development Plan  
SCH# 2018061044

Attached for your review and comment is the Notice of Preparation (NOP) for the North District Development Plan draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

**Tricia Thrasher**  
University of California, Riverside  
1223 University Ave., Suite 240  
Riverside, CA 92507-7209

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

  
Scott Morgan  
Director, State Clearinghouse

**Document Details Report  
State Clearinghouse Data Base**

**SCH#** 2018061044  
**Project Title** North District Development Plan  
**Lead Agency** University of California, Riverside

**Type** **NOP** Notice of Preparation

**Description** The proposed North District Development Plan is a plan put forth by UC Riverside to provide up to 6,000 student beds on the East Campus on an approx. 55-acre site located in the northeastern portion of the campus. The NDD Plan includes Phase 1 which involves the construction of about 1,500 student beds and associated facilities by 2020 and a future phase(s) which involves the construction of up to 4,500 student beds and associated facilities between 2020 and 2024/5. The project site is developed with Canyon Crest Family Student Housing that was occupied by student families until 2017 and is currently vacant. The site is designated for Family, Apartments, and Residence Hall student housing and Related Support, and Athletics and Recreation in the UC Riverside 2005 Long Range Development Plan. Furthermore, as a student housing project, the proposed project would support current and projected enrollment on the campus.

## AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
  - a. A brief description of the project.
  - b. The lead agency contact information.
  - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
  - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).
2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
  - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
  - a. Alternatives to the project.
  - b. Recommended mitigation measures.
  - c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
  - a. Type of environmental review necessary.
  - b. Significance of the tribal cultural resources.
  - c. Significance of the project's impacts on tribal cultural resources.
  - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
  - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
  - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
  - a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
  - b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).
  
8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).
  
9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).
  
10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
  - a. Avoidance and preservation of the resources in place, including, but not limited to:
    - i. Planning and construction to avoid the resources and protect the cultural and natural context.
    - ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
  - b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
    - i. Protecting the cultural character and integrity of the resource.
    - ii. Protecting the traditional use of the resource.
    - iii. Protecting the confidentiality of the resource.
  - c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
  - d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
  - e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
  - f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).
  
11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
  - a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
  - b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
  - c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

*This process should be documented in the Cultural Resources section of your environmental document.*

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: [http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation\\_CalEPAPDF.pdf](http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf)

## SB 18

SB 18 applies to local governments and requires **local governments** to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: [https://www.opr.ca.gov/docs/09\\_14\\_05\\_Updated\\_Guidelines\\_922.pdf](https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf)

Some of SB 18's provisions include:

1. **Tribal Consultation**: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. **No Statutory Time Limit on SB 18 Tribal Consultation**. There is no statutory time limit on SB 18 tribal consultation.
3. **Confidentiality**: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. **Conclusion of SB 18 Tribal Consultation**: Consultation should be concluded at the point in which:
  - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
  - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>

### NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center ([http://ohp.parks.ca.gov/?page\\_id=1068](http://ohp.parks.ca.gov/?page_id=1068)) for an archaeological records search. The records search will determine:
  - a. If part or all of the APE has been previously surveyed for cultural resources.
  - b. If any known cultural resources have been already been recorded on or adjacent to the APE.
  - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
  - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
  - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

**RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the North District Development Plan [SCAG NO. IGR9656]**

Dear Ms. Thrasher,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the North District Development Plan ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS) pursuant to Senate Bill (SB) 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.<sup>1</sup> SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Community Strategies (RTP/SCS) goals and align with RTP/SCS policies.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the North District Development Plan in Riverside County. The proposed project includes a plan to provide up to 6,000 student beds on the East Campus of UC Riverside on an approximately 55 acre site located in the northeastern portion of the campus.

**When available, please send environmental documentation to SCAG's Los Angeles office in Los Angeles (900 Wilshire Boulevard, Ste. 1700, Los Angeles, California 90017) or by email to [au@scag.ca.gov](mailto:au@scag.ca.gov) providing, at a minimum, the full public comment period for review.**

If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Anita Au, Associate Regional Planner, at (213) 236-1874 or [au@scag.ca.gov](mailto:au@scag.ca.gov). Thank you.

Sincerely,

  
Ping- /ng

Acting Manager, Compliance and Performance Monitoring

<sup>1</sup>Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2016 RTP/SCS for the purpose of determining consistency for CEQA. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a determination of consistency with the 2016 RTP/SCS for CEQA.

**COMMENTS ON THE NOTICE OF PREPARATION OF A  
DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE  
NORTH DISTRICT DEVELOPMENT PLAN [SCAG NO. IGR9656]**

**CONSISTENCY WITH RTP/SCS**

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS. For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the RTP/SCS.

**2016 RTP/SCS GOALS**

The SCAG Regional Council adopted the 2016 RTP/SCS in April 2016. The 2016 RTP/SCS seeks to improve mobility, promote sustainability, facilitate economic development and preserve the quality of life for the residents in the region. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see <http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx>). The goals included in the 2016 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2016 RTP/SCS are the following:

<b>SCAG 2016 RTP/SCS GOALS</b>	
RTP/SCS G1:	<i>Align the plan investments and policies with improving regional economic development and competitiveness</i>
RTP/SCS G2:	<i>Maximize mobility and accessibility for all people and goods in the region</i>
RTP/SCS G3:	<i>Ensure travel safety and reliability for all people and goods in the region</i>
RTP/SCS G4:	<i>Preserve and ensure a sustainable regional transportation system</i>
RTP/SCS G5:	<i>Maximize the productivity of our transportation system</i>
RTP/SCS G6:	<i>Protect the environment and health for our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking)</i>
RTP/SCS G7:	<i>Actively encourage and create incentives for energy efficiency, where possible</i>
RTP/SCS G8:	<i>Encourage land use and growth patterns that facilitate transit and active transportation</i>
RTP/SCS G9:	<i>Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies"</i>
	<small>*scAG does not yet have an agreed-upon security performance measure.</small>

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG 2016 RTP/SCS GOALS	
Goal	Analysis
RTP/SCS G1: <i>Align the plan investments and policies with improving regional economic development and competitiveness</i>	<i>Consistent: Statement as to why; Not-Consistent: Statement as to why; Or Not Applicable: Statement as to why; DEIR oaae number reference</i>
RTP/SCS G2: <i>Maximize mobility and accessibility for all people and goods in the region</i>	<i>Consistent: Statement as to why; Not-Consistent: Statement as to why; Or Not Applicable: Statement as to why; DEIR page number reference</i>
etc.	etc.

**2016 RTP/SCS STRATEGIES**

To achieve the goals of the 2016 RTP/SCS, a wide range of land use and transportation strategies are included in the 2016 RTP/SCS. Technical appendances of the 2016 RTP/SCS provide additional supporting information in detail. To view the 2016 RTP/SCS, please visit: <http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx>. The 2016 RTP/SCS builds upon the progress from the 2012 RTP/SCS and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that the SCAG region strives toward a more sustainable region, while the region meets and exceeds in meeting all of applicable statutory requirements pertinent to the 2016 RTP/SCS. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

**DEMOGRAPHICS AND GROWTH FORECASTS**

Local input plays an important role in developing a reasonable growth forecast for the 2016 RTP/SCS. SCAG used a bottom-up local review and input process and engaged local jurisdictions in establishing the base geographic and socioeconomic projections including population, household and employment. At the time of this letter, the most recently adopted SCAG jurisdictional-level growth forecasts that were developed in accordance with the bottom-up local review and input process consist of the 2020, 2035, and 2040 population, households and employment forecasts. To view them, please visit <http://www.scag.ca.gov/Documents/2016GrowthForecastByJurisdiction.pdf>. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts			Adopted City of Riverside Forecasts		
	Year2020	Year2035	Year2040	Year2020	Year2035	Year2040
Population	19,663,000	22,091,000	22,138,800	336,300	384,100	386,600
Households	6,458,000	7,325,000	7,412,300	101,200	117,700	118,600
Employment	8,414,000	9,441,000	9,871,500	157,900	195,900	200,500

**MITIGATION MEASURES**

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for the 2016 RTP/SCS for guidance, as appropriate. SCAG's Regional Council certified the Final PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on April 7, 2016 (please see: <http://scagrtpscs.net/Pages/FINAL2016PEIR.aspx>). The Final PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

# South Coast Air Quality Management District

University of California  
1223 University Avenue, Suite 240  
Riverside, CA 92521

## **Notice of Preparation of an Environmental Impact Report for the Proposed North District Development Plan**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Environmental Impact Report (EIR). Please send SCAQMD a copy of the EIR upon its completion. Note that copies of the EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the EIR directly to SCAQMD at the address shown in the letterhead. **In addition, please send with the EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files<sup>1</sup>. These include emission calculation spreadsheets and modeling input and output files (not PDF files). Without all files and supporting documentation, SCAQMD staff will be unable to complete our review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.**

### **Air Quality Analysis**

SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from SCAQMD's Subscription Services Department by calling (909) 396-3720. More guidance developed since this Handbook is also available on SCAQMD's website at: [http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-\(1993\)](http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993)). SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: [www.caleemod.com](http://www.caleemod.com).

---

<sup>1</sup> Pursuant to the CEQA Guidelines Section 15174, the information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

SCAQMD has also developed both regional and localized significance thresholds. SCAQMD staff requests that the Lead Agency quantify criteria pollutant emissions and compare the results to SCAQMD's CEQA regional pollutant emissions significance thresholds to determine air quality impacts. SCAQMD's CEQA regional pollutant emissions significance thresholds can be found here: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>. In addition to analyzing regional air quality impacts, SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by SCAQMD staff or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the proposed project and all air pollutant sources related to the proposed project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis.

#### Mobile Source Health Risk Assessment

Notwithstanding the court rulings, SCAQMD staff recognizes that the Lead Agencies that approve CEQA documents retain the authority to include any additional information they deem relevant to assessing and mitigating the environmental impacts of a project. Because of SCAQMD staff's concern about the potential public health impacts of siting sensitive populations within close proximity of freeways, SCAQMD staff recommends that, prior to approving the project, Lead Agencies consider the impacts of air pollutants on people who will live in a new project and provide mitigation where necessary.

When specific development is reasonably foreseeable as a result of the goals, policies, and guidelines in the proposed project, the Lead Agency should identify any potential adverse health risk impacts using its best efforts to find out and a good-faith effort at full disclosure in the CEQA document. Based on a review of aerial photographs and information in the NOP, SCAQMD staff found that the proposed project will be located immediately next to the I-215/ SR-60 Freeway. Because of the close proximity to the existing freeway, residents at the proposed project<sup>2</sup> would be exposed to diesel particulate matter (DPM), which is a toxic air contaminant and a carcinogen. Diesel particulate matter emitted from diesel powered engines (such as trucks) has been classified by the state as a toxic air contaminant and a carcinogen.

Since future residences of the proposed project would be exposed to toxic emissions from the nearby sources of air pollution (e.g., diesel fueled highway vehicles), SCAQMD staff recommends that the Lead Agency conduct a health risk assessment (HRA)<sup>3</sup> to disclose the potential health risks to the residents

---

<sup>2</sup> According to the Project Description in the Notice of Preparation, the proposed project would include new construction of up to approximately 6,000 student beds.

<sup>3</sup> "Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis," accessed at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis>.

from the vehicle emissions coming from vehicles operating on the I-215/ SR- 60 Freeway in the Draft EIR<sup>4</sup>.

#### Guidance Regarding Residences Sited Near a High-Volume Freeway or Other Sources of Air Pollution

SCAQMD staff recognizes that there are many factors Lead Agencies must consider when making local planning and land use decisions. To facilitate stronger collaboration between Lead Agencies and the SCAQMD to reduce community exposure to source-specific and cumulative air pollution impacts, the SCAQMD adopted the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning in 2005. This Guidance Document provides suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. SCAQMD staff recommends that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions. This Guidance Document is available on SCAQMD's website at: <http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf>. Additional guidance on siting incompatible land uses (such as placing homes near freeways or other polluting sources) can be found in the California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*, which can be found at: <http://www.arb.ca.gov/ch/handbook.pdf>. Guidance<sup>5</sup> on strategies to reduce air pollution exposure near high-volume roadways can be found at: [https://www.arb.ca.gov/ch/rd\\_technical\\_advisory\\_final.PDF](https://www.arb.ca.gov/ch/rd_technical_advisory_final.PDF).

#### Mitigation Measures

In the event that the proposed project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize these impacts. Pursuant to CEQA Guidelines Section 15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying potential mitigation measures for the proposed project, including:

- Chapter 11, Mitigating the Impact of a Project, of SCAQMD's CEQA Air Quality Handbook
- SCAQMD's CEQA web pages available here: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf>
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>

Many strategies are available to reduce exposure, including, but are not limited to, building filtration systems, sound walls, vegetation barriers, etc. Because of the potential adverse health risks involved with siting housing near a freeway, it is essential that any proposed strategy must be carefully evaluated before

---

<sup>4</sup> SCAQMD has developed the CEQA significance threshold of 10 in one million for cancer risk. When SCAQMD acts as the Lead Agency, SCAQMD staff conducts a HRA, compares the maximum cancer risk to the threshold of 10 in one million to determine the level of significance for health risk impacts, and identifies mitigation measures if the risk is found to be significant.

<sup>5</sup> In April 2017, CARB published a technical advisory, *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways: Technical Advisory*, to supplement CARB's Air Quality and Land Use Handbook: A Community Health Perspective. This technical advisory is intended to provide information on strategies to reduce exposures to traffic emissions near high-volume roadways to assist land use planning and decision-making in order to protect public health and promote equity and environmental justice. The technical advisory is available at: <https://www.arb.ca.gov/ch/landuse.htm>.

implementation. In the event that enhanced filtration units on housing residents are proposed, the Lead Agency should consider the limitations of the enhanced filtration. For example, in a study that SCAQMD conducted to investigate filters<sup>6</sup>, a cost burden is expected to be within the range of \$120 to \$240 per year to replace each filter. In addition, because the filters would not have any effectiveness unless the HVAC system is running, there may be increased energy costs to the resident. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and it does not account for the times when the residents have their windows or doors open or are in common space areas of the project. Moreover, these filters have no ability to filter out any toxic gases from vehicle exhaust. The presumed effectiveness and feasibility of any filtration units should therefore be evaluated in more detail prior to assuming that they will sufficiently alleviate near roadway exposures to DPM emissions and before they are relied upon by Lead Agency as mitigation measures to support a less than significant cancer risk finding (CEQA Guidelines Section 15091(a)(1)).

### **Alternatives**

In the event that the proposed project generates significant adverse air quality impacts, CEQA requires the consideration and discussion of alternatives to the project or its location which are capable of avoiding or substantially lessening any of the significant effects of the project. The discussion of a reasonable range of potentially feasible alternatives, including a “no project” alternative, is intended to foster informed decision-making and public participation. Pursuant to CEQA Guidelines Section 15126.6(d), the Draft EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project.

### **Permits**

In the event that the proposed project requires a permit from SCAQMD, SCAQMD should be identified as a responsible agency for the proposed project. For more information on permits, please visit SCAQMD webpage at: <http://www.aqmd.gov/home/permits>. Questions on permits can be directed to SCAQMD’s Engineering and Permitting staff at (909) 396-3385.

### **Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling SCAQMD’s Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available at SCAQMD’s webpage at: <http://www.aqmd.gov>.

SCAQMD staff is available to work with the Lead Agency to ensure that project air quality impacts are accurately evaluated and any significant impacts are mitigated where feasible. If you have any questions regarding this letter, please contact Robert Dalbeck, Assistant Air Quality Specialist, at [rdalbeck@aqmd.gov](mailto:rdalbeck@aqmd.gov).

Sincerely,

*Daniel Garcia*

Daniel Garcia

Program Supervisor

Planning, Rule Development & Area Sources

---

<sup>6</sup> This study evaluated filters rated MERV 13+ while the proposed mitigation calls for less effective MERV 12 or better filters. Ms. Tricia Thrasher, ASLA, LEED AP  
Principal Environmental Planner  
University of California Riverside  
1223 University Avenue, Suite 240  
Riverside, CA 92521

Subject: City of Riverside's Review of a Notice of Preparation of an Environmental Impact Report (EIR) for UC Riverside's North District Development (NDD) Plan

Dear Ms. Thrasher:

Thank you for the opportunity to comment on the Notice of Preparation of an Environmental Impact Report (EIR) for UCR's North District Development (NDD) Plan.

We understand that the NDD Plan involves redevelopment of approximately 55 acres in the northeast portion of UCR's East Campus. The existing Canyon Crest Family Student Housing (unoccupied), would be replaced by higher density student housing of up to 6,000 student beds. The NDD Plan provides for the phased development of apartments, mixed-use residential, resident life amenity spaces, living and learning spaces, resident life support spaces, dining facilities, athletics facilities, and parking areas.

The City has reviewed the Environmental Initial Study, and we wish to provide the following comments:

Public Works Department:

- The City's Traffic Engineering Division requests the opportunity to review the Scoped Traffic Impact Analysis (TIA) for the Draft EIR, and requests that the analysis follow the City's TIA Guidelines.
- A sewer capacity study should be prepared to appropriately analyze project impacts to the City sewer system, and identify mitigation for potentially significant impacts related to wastewater impacts.

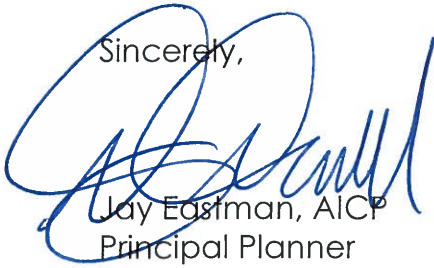

Riverside Public Utilities Department:

- A Water Supply Assessment needs to be completed in conjunction with the Draft EIR.
- The project's impact on the City's Water Transmission and Distribution system needs to be fully analyzed in the EIR as noted on the Initial Study checklist.

The City of Riverside appreciates your consideration of the comments provided in this letter. Please forward the pending Draft EIR for the NDD Plan to the City of Riverside Planning Division. Should you have any questions regarding this letter, please contact Doug Darnell, AICP, Senior Planner, at (951) 826-5219, or by e-mail at ddarnell@riversideca.gov.

We thank you again for the opportunity to provide comments on this proposal, and look forward to working with you in the future.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jay Eastman".

## 2005 LRDP PLANNING STRATEGIES, PROGRAMS AND PRACTICES, AND MITIGATION MEASURES

### Planning Strategies

#### *Land Use*

1. Achieve academic core densities of 1.0 FAR or higher on the East Campus and 1.6 to 1.9 FAR on the West Campus in order to achieve a balance of academic land area versus other required uses.
2. In order to achieve these development densities, infill sites in the partially developed East Campus academic core and expand to the West Campus academic zone immediately adjacent to the I-215/SR-60 freeway, maintaining a compact and contiguous academic core.
3. Maintain the teaching and research fields on the West Campus south of Martin Luther King Jr. Boulevard.
4. Pursue a goal of housing 50 percent of student enrollment in on campus or campus controlled housing.
5. Remove existing family housing units on the East Campus, and provide replacement and additional units of family housing on the West Campus.
6. Provide expanded athletics and recreational facilities and fields on the East and West Campuses, adjacent to concentrations of student housing.
7. Over time, relocate parking from central campus locations to the periphery of the academic core and replace surface parking with structures, where appropriate.

#### *Open Space*

1. Protect the steep and natural southeast hillsides designated as a Natural Open Space Reserve, to protect wildlife habitat, to provide a visual backdrop to the campus, and protect against erosion.
2. Within the Natural Open Space Reserve, no major facilities will be allowed (except for sensitively sited utility projects), vehicular and pedestrian access will be limited, and native plant materials will be used, where needed, for erosion, screening, and restoration.
3. In Naturalistic Open Space areas, where arroyos and other natural features exist, preserve wherever possible, existing landforms, native plant materials, and trees. Where appropriate, restore habitat value.
4. Provide landscaped buffers and setbacks along campus edges, such as Valencia Hill Drive and its extension south of Big Springs Road, Martin Luther King Jr. Boulevard, and the I-215/SR-60 freeway.
5. Retain the Carillon Mall as a major Campus Landmark Open Space, respecting its existing dominant width of approximately 200 feet throughout its length. Other "named" malls and walks will be 100 feet wide.

6. Provide a new Campus Landmark Open Space on the West Campus, the Gage Canal Mall, to reflect the natural dry arroyos that are part of the Riverside landscape, and provide gathering/activity space within and adjacent to the Mall.
7. Provide neighborhood parks and tot lots in the family housing areas as neighborhood open space.

### *Campus and Community*

1. Provide sensitive land use transitions and landscaped buffers where residential neighborhoods might experience noise or light from UCR activities.
2. Encourage a “permeable” edge with the community where interaction is desirable, especially along University Avenue and in areas where a high proportion of students live in close proximity to the campus.
3. Discourage vehicular traffic originating off campus from moving through campus as a short cut.
4. Provide strong connections within the campus and its edges to promote walking, bicycling and transit use, rather than vehicular traffic.
5. Continue to improve campus signage and wayfinding to provide easy access for visitors and to discourage impacts in neighboring residential areas.
6. Locate public-oriented uses, such as performance facilities, galleries and major sports venues, where they can be easily accessed and where they can contribute to the vitality and economic health of businesses along University Avenue.
7. Work cooperatively with the City of Riverside to effect the redevelopment of University Avenue between the campus and Chicago Avenue as a high intensity mixed use district, with an abundance of campus/community serving businesses and uses.
8. Encourage the City to explore the opportunity for student housing in a mixed use configuration along University Avenue.
9. Strongly encourage private developers to provide a variety of housing types that target both current and future needs of the overall community and the campus.
10. Use City/UCR/RCC enhancement of Downtown cultural, arts and entertainment resources and the campus need for off-campus housing as the foundation of a revitalization program.
11. Support the City in their coordination of Block Grant, Redevelopment set-aside, and other funds for the upgrading of Neighborhood Reinvestment Areas adjacent to University Avenue.
12. Support the City in creating design guidelines for community, student, faculty, staff and visitor housing along University Avenue that has a friendly street presence.
13. Support the City in amending the Eastside Community Plan to update housing strategies and action plans for rehabilitation of existing housing stock and new construction. This should be done in conjunction with modifications to the University Avenue Specific Plan.

14. Support the City in creating a “town/gown square” at the southwest corner of the intersection of University and Chicago Avenues to provide retail and services for the community and campus.
15. Support the City in developing design guidelines for mixed use housing and retail along University Avenue.
16. Partner with the City to create a Riverside/UCR Entrepreneurial Program at the “town/gown square” related to minority business Opportunities in the University Avenue and Hunter Business Park areas.
17. Work with the City to link the open spaces of UCR, University Avenue, the Marketplace and the Downtown with enhanced streetscape treatments for University to Market and from Market to Santa Fe Street along Mission Inn Avenue/7th Street.
18. Work with the City to link the open spaces of UCR with the Citywide Trail Network.
19. Work with the City to develop streetscape concepts with banners, lighting, street furniture and public art that celebrate the linkages between the University and Downtown. Banners should highlight cultural and artistic events in Downtown and at UCR when appropriate.
20. Work with the City to evaluate the conversion of University Avenue from Iowa Avenue to the I-215/SR 60 freeway from an auto emphasis street to a biking, pedestrian, transit street with localized auto access. Consider Martin Luther King Jr. Boulevard/14th Street and Blaine/3rd Street as primary freeway connecting streets.
21. Work with the City to emphasize University Avenue as the link between the UCR campus and Downtown rather than as the link to the freeways.
22. Work with the City to encourage bicycle and pedestrian use and safety, including minimizing the number of curb cuts for residential and retail development along University Avenue to Chicago Avenue and then to the Downtown.

### ***Transportation***

1. Develop an integrated multi-modal transportation plan to encourage walking, biking, and transit use.
2. Expand shuttle or tram service connecting major parking lots and campus destinations, and linking the East and West Campuses. Coordinate this system with RTA routes and schedules.
3. Provide a continuous network of bicycle lanes and paths throughout the campus, connecting to off-campus bicycle routes.
4. Over time, limit general vehicular circulation in the central campus, but allow transit, service, and emergency vehicle access, and provide access for persons with mobility impairments.
5. Provide bicycle parking at convenient locations.
6. Implement parking management measures that may include
  - Restricted permit availability

- Restricted permit mobility
- Differential permit parking (price determined by proximity to facilities/buildings).

### ***Development Strategies***

1. Establish a design review process to provide regular review of building and landscape development on campus.
2. Review and update, as needed, the Campus Design Guidelines and the Campus Landscape Guidelines (now the 2007 Campus Design Guidelines) to ensure conformity with LRDP planning strategies.
3. Review other plans that may be prepared, such as district, sub-area or transportation plans, for conformity with the goals and design intent of the 2005 LRDP.

### **Programs and Practices**

#### ***Aesthetics***

PP 4.1-1                      The Campus shall provide design professionals with the 2007 Campus Design Guidelines and instructions to implement the guidelines, including those sections related to use of consistent scale and massing, compatible architectural style, complementary color palette, preservation of existing site features, and appropriate site and exterior lighting design.

(This is identical to Land Use PP 4.9-1(a))

PP 4.1-2(a)                      The Campus shall continue to provide design professionals with the 2007 Campus Design Guidelines and instructions to develop project-specific landscape plans that are consistent with the Guidelines with respect to the selection of plants, retention of existing trees, and use of water conserving plants, where feasible.

(This is identical to Land Use PP 4.9-1(b))

PP 4.1-2(b)                      The Campus shall continue to relocate, where feasible, mature “specimen” trees that would be removed as a result of construction activities on the campus.

(This is identical to Land Use PP 4.9-1(c).)

PP 4.1-2(c)                      To reduce impacts to the Natural Open Space Reserve area:

- (i) If any construction is proposed within the Open Space Reserve, conduct surveys for threatened and endangered species at an appropriate time of year. If these species are located in this area, the site or sites shall be protected from damage by either protective fencing or some other means of restricting access.

- (ii) Landscaping around development areas adjacent to the Open Space Reserve shall emphasize native or historically significant plant material that provide wildlife value and a sensitive transition from developed areas to natural open spaces. A qualified native landscape specialist shall be retained to develop an appropriate native landscape plan for the development areas.

(This is identical to Biological Resources PP 4.4-1(a) and Hydrology PP 4.8-3(a).)

PP 4.1-2(d)

To reduce disturbance of Natural and Naturalistic Open Space areas:

- (i) Unnecessary driving in sensitive or otherwise undisturbed areas shall be avoided. New roads or construction access roads would not be created where adequate access already exists.
- (ii) Removal of native shrub or brush shall be avoided, except where necessary.
- (iii) Drainages shall be avoided, except where required for construction. Limit activity to crossing drainages rather than using the lengths of drainage courses for access.
- (iv) Excess fill or construction waste shall not be dumped in washes.
- (v) Vehicles or other equipment shall not be parked in washes or other drainages.
- (vi) Overwatering shall be avoided in washes and other drainages.
- (vii) Wildlife including species such as fox, coyote, snakes, etc. shall not be harassed. Harassment includes shooting, throwing rocks, etc.

(This is identical to Biological Resources PP 4.4-1(b) and Hydrology PP 4.8-3(b).)

### *Air Quality*

PP 4.3-1

The Campus shall continue to implement a Transportation Demand Management program that meets or exceeds all trip reduction and AVR requirements of the SCAQMD. The TDM program may be subject to modification as new technologies are developed or alternate program elements are found to be more effective.

(This is identical to Transportation and Traffic PP 4.14-1)

PP 4.3-2(a)

Construction contract specifications shall include the following:

- (i) Compliance with all SCAQMD rules and regulations
- (ii) Maintenance programs to assure vehicles remain in good operating condition
- (iii) Avoid unnecessary idling of construction vehicles and equipment

- (iv) Use of alternative fuel construction vehicles
- (v) Provision of electrical power to the site, to eliminate the need for on-site generators

PP 4.3-2(b)

The Campus shall continue to implement dust control measures consistent with SCAQMD Rule 403—Fugitive Dust during the construction phases of new project development. The following actions are currently recommended to implement Rule 403 and have been quantified by the SCAQMD as being able to reduce dust generation between 30 and 85 percent depending on the source of the dust generation. The Campus shall implement these measures as necessary to reduce fugitive dust. Individual measures shall be specified in construction documents and require implementation by construction contractor:

- (i) Apply water and/or approved non-toxic chemical soil stabilizers according to manufacturer's specification to all inactive construction areas (previously graded areas that have been inactive for 10 or more days)
- (ii) Replace ground cover in disturbed areas as quickly as possible
- (iii) Enclose, cover, water twice daily, or apply approved chemical soil binders to exposed piles with 5 percent or greater silt content
- (iv) Water active grading sites at least twice daily
- (v) Suspend all excavating and grading operations when wind speeds (as instantaneous gusts) exceed 25 miles per hour over a 30-minute period
- (vi) All trucks hauling dirt, sand, soil, or other loose materials shall be covered or maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer), in accordance with Section 23114 of the California Vehicle Code
- (vii) Sweep streets at the end of the day if visible soil material is carried over to adjacent roads
- (viii) Install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip
- (ix) Apply water three times daily or chemical soil stabilizers according to manufacturers' specifications to all unpaved parking or staging areas or unpaved road surfaces
- (x) Post and enforce traffic speed limits of 15 miles per hour or less on all unpaved roads

(This is identical to Geology PP 4.6-2(a) and Hydrology PP 4.8-3(c).)

PP 4.3-2(c) The Campus shall continue to implement SCAQMD Rule 1403—Asbestos when demolishing existing buildings on the campus.

### ***Biological Resources***

PP 4.4-1(a) To reduce impacts to the Natural Open Space Reserve area:

- (i) If any construction is proposed within the Open Space Reserve, conduct surveys for threatened and endangered species at an appropriate time of year. If these species are located in this area, the site or sites shall be protected from damage by either protective fencing or some other means of restricting access.
- (ii) Landscaping around development areas adjacent to the Open Space Reserve shall emphasize native or historically significant plant material that provides wildlife value and a sensitive transition from developed areas to natural open spaces. A qualified native landscape specialist shall be retained to develop an appropriate native landscape plan for the development areas.

(This is identical to Aesthetics PP 4.1-2(c) and Hydrology PP 4.8-3(a).)

PP 4.4-1(b) To reduce disturbance of Natural and Naturalistic Open Space areas:

- (i) Unnecessary driving in sensitive or otherwise undisturbed areas shall be avoided. New roads or construction access roads would not be created where adequate access already exists.
- (ii) Removal of native shrub or brush shall be avoided, except where necessary.
- (iii) Drainages shall be avoided, except where required for construction. Limit activity to crossing drainages rather than using the lengths of drainage courses for access.
- (iv) Excess fill or construction waste shall not be dumped in washes.
- (v) Vehicles or other equipment shall not be parked in washes or other drainages.
- (vi) Overwatering shall be avoided in washes and other drainages.
- (vii) Wildlife including species such as fox, coyote, snakes, etc. shall not be harassed. Harassment includes shooting, throwing rocks, etc.

(This is identical to Aesthetics PP 4.1-2(d) and Hydrology 4.8-3(b).)

PP 4.4-2(a) Impacts to riparian and wetland habitats shall be avoided, wherever feasible. If avoidance is not feasible, then the impacts will be evaluated as part of the Clean Water Act section 404 and California Fish and Game Code section 1602 permit application process. If mitigation is required, the University of California will develop and implement a resource mitigation program to be reviewed and

approved by the USACE and CDFG through the state and federal permit process. The permit shall mitigate the habitats such that they are consistent with the Clean Water Act and CDFG policy of “no net loss” of wetland. Furthermore, impacted wetlands and/or riparian vegetation that cannot be avoided would be replaced at a ratio approved by the USACE and CDFG. If replacement within the area is not feasible, then an approved mitigation bank or other off-site area will be used. The revegetation of impacted areas or mitigation parcels will be performed by a qualified restoration specialist and shall be conducted only on sites where soils, hydrology, and microclimate conditions are suitable for riparian habitat. First priority will be given to areas that are adjacent to existing patches of native habitat.

PP 4.4-2(b) In compliance with NPDES, the Campus would continue to implement Best Management Practices, as identified in the UCR Stormwater Management Plan (UCR 2003):

- (i) Public education and outreach on stormwater impacts
- (ii) Public involvement/participation
- (iii) Illicit discharge detection and elimination
- (iv) Pollution prevention/good housekeeping for facilities
- (v) Construction site stormwater runoff control
- (vi) Post-construction stormwater management in new development and redevelopment

(This is identical to Geology and Soils PP 4.6-2(b) and Hydrology PP 4.8-3(d).)

### ***Cultural Resources***

PP 4.5-2 If any project is proposed that would require or result in the relocation or demolition of a historic structure, the Campus shall prepare a project-specific CEQA analysis, pursuant to Section 15064.5 et seq. of the CEQA Guidelines.

PP 4.5-3 If construction would occur within the southeast hills or within the portion of the West Campus north of Martin Luther King Boulevard, a surface field survey shall be conducted in conjunction with a project specific environmental analysis in accordance with CEQA. Depending on the results of the survey, the following measures shall be implemented:

- (i) If no evidence of surface archaeological resources is discovered, or if development would occur in areas not designated as sensitive for archaeological resources:
  - Prior to site preparation or grading activities, construction personnel shall be informed of the potential for encountering unique archaeological

resources and taught how to identify these resources if encountered. This shall include the provision of written materials to familiarize personnel with the range of resources that might be expected, the type of activities that may result in impacts, and the legal framework of cultural resources protection. Construction specifications shall require that all construction personnel shall be instructed to stop work in the vicinity of a potential discovery until a qualified, non-University archaeologist assesses the significance of the find and implements appropriate measures to protect or scientifically remove the find. Construction personnel shall also be informed that unauthorized collection of archaeological resources is prohibited.

- The Campus shall require the site project contractor to report any evidence of archaeological resources unearthed during development excavation to the campus.
  - The archaeologist shall then be present during the grading and shall have the authority to halt disturbance of any archaeological resources long enough to assess the situation, conduct testing, and implement mitigation measures that would reduce impacts in accordance with Section 21083.2 of CEQA.
- (ii) If any evidence of archaeological materials is discovered on the surface during field survey, then:
- A qualified archaeologist shall prepare a recovery plan for the resources.
  - An archaeologist shall also be present during grading and shall have the authority to halt disturbance of any archaeological resources long enough to assess the situation, conduct testing, and implement mitigation measures that would reduce impacts in accordance with Section 21083.2 of CEQA.

PP 4.5-4

Construction specifications shall require that if a paleontological resource is uncovered during construction activities:

- (i) A qualified paleontologist shall determine the significance of the find.
- (ii) The Campus shall make an effort to preserve the find intact through feasible project design measures.
- (iii) If it cannot be preserved intact, then the University shall retain a qualified non-University paleontologist to design and implement a treatment plan to document and evaluate the data and/or preserve appropriate scientific samples.
- (iv) The paleontologist shall prepare a report of the results of the study, following accepted professional practice.

- (v) Copies of the report shall be submitted to the University and the Riverside County Museum.

PP 4.5-5

In the event of the discovery of a burial, human bone, or suspected human bone, all excavation or grading in the vicinity of the find shall halt immediately and the area of the find shall be protected and the University immediately shall notify the Riverside County Coroner of the find and comply with the provisions of P.R.C. Section 5097 with respect to Native American involvement, burial treatment, and re-burial, if necessary.

### *Geology and Soils*

PP 4.6-1(a)

During project-specific building design, a site-specific geotechnical study shall be conducted under the direct supervision of a California Registered Engineering Geologist or licensed geotechnical engineer to assess seismic, geological, soil, and groundwater conditions at each construction site and develop recommendations to prevent or abate any identified hazards. The study shall follow applicable recommendations of CDMG Special Publication 117 and shall include, but not necessarily be limited to:

- Determination of the locations of any suspected fault traces and anticipated ground acceleration at the building site,
- Potential for displacement caused by seismically induced shaking, fault/ground surface rupture, liquefaction, differential soil settlement, expansive and compressible soils, landsliding, or other earth movements or soil constraints, and
- Evaluation of depth to groundwater.

The structural engineer shall incorporate the recommendations made by the geotechnical report when designing building foundations.

PP 4.6-1(b)

The Campus shall continue to implement its current seismic upgrade program.

PP 4.6-1(c)

The Campus will continue to fully comply with the University of California's Policy for Seismic Safety, as amended. The intent of this policy is to ensure that the design and construction of new buildings and other facilities shall, as a minimum, comply with seismic provisions of California Code of Regulations, Title 24, California Administrative Code, the California State Building Code, or local seismic requirements, whichever requirements are most stringent.

PP 4.6-2(a)

The Campus shall continue to implement dust control measures consistent with SCAQMD Rule 403—Fugitive Dust during the construction phases of new project development. The following actions are currently recommended to implement Rule 403 and have been quantified by the SCAQMD as being able to reduce dust generation between 30 and 85 percent depending on the source of the dust generation. The Campus shall implement these measures as necessary to

reduce fugitive dust. Individual measures shall be specified in construction documents and require implementation by construction contractor:

- (i) Apply water and/or approved nontoxic chemical soil stabilizers according to manufacturer's specification to all inactive construction areas (previously graded areas that have been inactive for 10 or more days)
- (ii) Replace ground cover in disturbed areas as quickly as possible
- (iii) Enclose, cover, water twice daily, or apply approved chemical soil binders to exposed piles with 5 percent or greater silt content
- (iv) Water active grading sites at least twice daily
- (v) Suspend all excavating and grading operations when wind speeds (as instantaneous gusts) exceed 25 miles per hour over a 30-minute period
- (vi) All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer), in accordance with Section 23114 of the California Vehicle Code
- (vii) Sweep streets at the end of the day if visible soil material is carried over to adjacent roads
- (viii) Install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip
- (ix) Apply water three times daily or chemical soil stabilizers according to manufacturers' specifications to all unpaved parking or staging areas or unpaved road surfaces
- (x) Post and enforce traffic speed limits of 15 miles per hour or less on all unpaved roads

(This is identical to Air Quality PP 4.3-2(b) and Hydrology PP 4.8-3(c).)

PP 4.6-2(b)

In compliance with National Pollution Discharge Elimination System (NPDES), the Campus would continue to implement Best Management Practices, as identified in the UCR Stormwater Management Plan (UCR 2003):

- (i) Public education and outreach on stormwater impacts
- (ii) Public involvement/participation
- (iii) Illicit discharge detection and elimination
- (iv) Pollution prevention/good housekeeping for facilities
- (v) Construction site stormwater runoff control

(vi) Post-construction stormwater management in new development and redevelopment

(This is identical to Biological Resources PP 4.4-2(b) and Hydrology PP 4.8-3(d).)

### ***Hazards and Hazardous Materials***

PP 4.7-1 The Campus shall continue to implement the current (or equivalent) health and safety plans, programs, and practices related to the use, storage, disposal, or transportation of hazardous materials, including, but not necessarily limited to, the Business Plan, the Broadscope Radioactive Materials License, and the following programs: Biosafety, Emergency Management, Environmental Health, Hazardous Materials, Industrial Hygiene and Safety, Laboratory/Research Safety, Radiation Safety, and Integrated Waste Management. These programs may be subject to modification as more stringent standards are developed or if the programs are replaced by other programs that incorporate similar health and safety protection measures.

PP 4.7-2 The Campus shall perform hazardous materials surveys on buildings and soils, if applicable, prior to demolition. When remediation is deemed necessary, surveys shall identify all potential hazardous materials within the structure to be demolished, and identify handling and disposal practices. The Campus shall follow the practices during building demolition to ensure construction worker and public safety.

PP 4.7-3 The Campus will inform employees and students of hazardous materials minimization strategies applicable to research, maintenance, and instructional activities, and require the implementation of these strategies where feasible. Strategies include but are not limited to the following:

- (i) Maintenance of online database by EH&S of available surplus chemicals retrieved from laboratories to minimize ordering or new chemicals.
- (ii) Shifting from chemical usage to micro techniques as standard practice for instruction and research, as better technology becomes available.

PP 4.7-4 Prior to demolition of structures on the campus or new construction on former agricultural teaching and research fields, the Campus shall complete a Phase I environmental site assessment to determine the potential for soil or groundwater contamination on a project site. If the assessment determines that a substantial potential exists on the site, the Campus shall develop and implement an appropriate testing and, if needed, develop a remediation strategy prior to demolition or construction activities.

If contaminated soil and/or groundwater is encountered during the removal of onsite debris or during excavation and/or grading activities

- (i) The construction contractor(s) shall stop work and immediately inform EH&S.

- (ii) An on-site assessment shall be conducted to determine if the discovered materials pose a significant risk to the public or construction workers.
- (iii) If the materials are determined to pose such a risk, a remediation plan shall be prepared and submitted to EH&S to comply with all federal and State regulations necessary to clean and/or remove the contaminated soil and/or groundwater.
- (iv) Soil remediation methods could include, but are not necessarily limited to, excavation and on-site treatment, excavation and off-site treatment or disposal, and/or treatment without excavation.
- (v) Remediation alternatives for cleanup of contaminated groundwater could include, but are not necessarily limited to, on-site treatment, extraction and off-site treatment, and/or disposal.
- (vi) The construction schedule shall be modified or delayed to ensure that construction will not inhibit remediation activities and will not expose the public or construction workers to significant risks associated with hazardous conditions.

PP 4.7-7(a)

To the extent feasible, the Campus shall maintain at least one unobstructed lane in both directions on campus roadways. At any time only a single lane is available, the Campus shall provide a temporary traffic signal, signal carriers (i.e., flagpersons), or other appropriate traffic controls to allow travel in both directions. If construction activities require the complete closure of a roadway segment, the Campus shall provide appropriate signage indicating alternative routes.

(This is identical to Transportation and Traffic PP 4.14-5.)

PP 4.7-7(b)

To maintain adequate access for emergency vehicles when construction projects would result in roadway closures, the Office of Design and Construction shall consult with the UCPD, EH&S, and the RFD to disclose roadway closures and identify alternative travel routes.

(This is identical to Transportation and Traffic PP 4.14-8.)

### ***Hydrology and Water Quality***

PP 4.8-1

The Campus will continue to comply with all applicable water quality requirements established by the SARWQCB.

(This is identical to Utilities PP 4.15-5.)

PP 4.8-2(a)

To further reduce the campus' impact on domestic water resources, to the extent feasible, UCR will

- (i) Install hot water recirculation devices (to reduce water waste)

- (ii) Continue to require all new construction to comply with applicable State laws requiring water-efficient plumbing fixtures, including but not limited to the Health and Safety Code and Title 24, California Code of Regulations, Part 5 (California Plumbing Code)
- (iii) Retrofit existing plumbing fixtures that do not meet current standards on a phased basis over time
- (iv) Install recovery systems for losses attributable to existing and proposed steam and chilled-water systems
- (v) Prohibit using water as a means of cleaning impervious surfaces
- (vi) Install water-efficient irrigation equipment to maximize water savings for landscaping and retrofit existing systems over time

(This is identical to Utilities PP 4.15-1(b))

PP 4.8-2(b) The Campus shall promptly detect and repair leaks in water and irrigation pipes.

(This is identical to Utilities PP 4.15-1(c))

PP 4.8-2(c) The Campus shall avoid serving water at food service facilities except upon request.

(This is identical to Utilities PP 4.15-1(d))

PP 4.8-3(a) To reduce impacts to the Natural Open Space Reserve area:

- (i) If any construction is proposed within the Open Space Reserve, conduct surveys for threatened and endangered species at an appropriate time of year. If these species are located in this area, the site or sites shall be protected from damage by either protective fencing or some other means of restricting access.
- (ii) Landscaping around development areas adjacent to the Open Space Reserve shall emphasize native or historically significant plant material that provides wildlife value and a sensitive transition from developed areas to Natural open spaces. A qualified native landscape specialist shall be retained to develop an appropriate native landscape plan for the development areas.

(This is identical to Biological Resources PP 4.4-1(a) and Aesthetics 4.1-2(c).)

PP 4.8-3(b) To reduce disturbance of Natural and Naturalistic Open Space areas:

- (i) Unnecessary driving in sensitive or otherwise undisturbed areas shall be avoided. New roads or construction access roads would not be created where adequate access already exists.

- (ii) Removal of native shrub or brush shall be avoided, except where necessary.
- (iii) Drainages shall be avoided, except where required for construction. Limit activity to crossing drainages rather than using the lengths of drainage courses for access.
- (iv) Excess fill or construction waste shall not be dumped in washes.
- (v) Vehicles or other equipment shall not be parked in washes or other drainages.
- (vi) Overwatering shall be avoided in washes and other drainages.
- (vii) Wildlife including species such as fox, coyote, snakes, etc. shall not be harassed. Harassment includes shooting, throwing rocks, etc.

(This is identical to Aesthetics PP 4.1-2(d) and Biological Resources PP 4.4-1(b).)

PP 4.8-3(c)

The Campus shall continue to implement dust control measures consistent with SCAQMD Rule 403—Fugitive Dust during the construction phases of new project development. The following actions are currently recommended to implement Rule 403 and have been quantified by the SCAQMD as being able to reduce dust generation between 30 and 85 percent depending on the source of the dust generation. The Campus shall implement these measures as necessary to reduce fugitive dust. Individual measures shall be specified in construction documents and require implementation by construction contractor:

- (i) Apply water and/or approved nontoxic chemical soil stabilizers according to manufacturer's specification to all inactive construction areas (previously graded areas that have been inactive for 10 or more days)
- (ii) Replace ground cover in disturbed areas as quickly as possible
- (iii) Enclose, cover, water twice daily, or apply approved chemical soil binders to exposed piles with 5 percent or greater silt content
- (iv) Water active grading sites at least twice daily
- (v) Suspend all excavating and grading operations when wind speeds (as instantaneous gusts) exceed 25 miles per hour over a 30-minute period (vi) All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer), in accordance with Section 23114 of the California Vehicle Code
- (vii) Sweep streets at the end of the day if visible soil material is carried over to adjacent roads
- (viii) Install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip

(ix) Apply water three times daily or chemical soil stabilizers according to manufacturers' specifications to all unpaved parking or staging areas or unpaved road surfaces

(x) Post and enforce traffic speed limits of 15 miles per hour or less on all unpaved roads

(This is identical to Air Quality PP 4.3-2(b) and Geology PP 4.6-2(a).)

PP 4.8-3(d): In compliance with NPDES, the Campus would continue to implement Best Management Practices, as identified in the UCR Stormwater Management Plan (UCR 2003):

(i) Public education and outreach on stormwater impacts

(ii) Public involvement/participation

(iii) Illicit discharge detection and elimination

(iv) Pollution prevention/good housekeeping for facilities

(v) Construction site stormwater runoff control

(vi) Post-construction stormwater management in new development and redevelopment

(This is identical to Biological Resources PP 4.4-2(b) and Geology and Soils PP 4.6-2(b).)

PP 4.8-3(e) Prior to the time of design approval, the Campus will evaluate each specific project to determine if the project runoff would exceed the capacity of the existing storm drain system. If it is found that the capacity would be exceeded, one or more of the following components of the storm drain system would be implemented to minimize the occurrence of local flooding:

(i) Multi-project stormwater detention basins

(ii) Single-project detention basins

(iii) Surface detention design

(iv) Expansion or modification of the existing storm drain system

(v) Installation of necessary outlet control facilities

PP 4.8-10 In the event of an emergency, including catastrophic failure of the California State Water Project pipeline, the Campus would implement the Emergency Operations Plan.

## *Land Use*

PP 4.9-1(a) The Campus shall provide design professionals with the 2007 Campus Design Guidelines and instructions to implement the guidelines, including those sections related to use of consistent scale and massing, compatible architectural style, complementary color palette, preservation of existing site features, and appropriate site and exterior lighting design.

(This is identical to Aesthetics PP 4.1-1.)

PP 4.9-1(b) The Campus shall continue to provide design professionals with the 2007 Campus Design Guidelines and instructions to develop project-specific landscape plans that are consistent with the Guidelines with respect to the selection of plants, retention of existing trees, and use of water conserving plants, where feasible.

(This is identical to Aesthetics PP 4.1-2(a).)

PP 4.9-1(c) The Campus shall continue to relocate, where feasible, mature “specimen” trees that would be removed as a result of construction activities on the campus.

(This is identical to Aesthetics PP 4.1-2(b).)

## *Noise*

PP 4.10-1(a) UCR will incorporate the following siting design measures to reduce long-term noise impacts:

- (i) Truck access, parking area design, and air conditioning/refrigeration units will be designed and evaluated when planning specific individual new facilities to minimize the potential for noise impacts to adjacent developments.
- (ii) Building setbacks, building design and orientation will be used to reduce intrusive noise at sensitive student residential and educational building locations near main campus access routes, such as Blaine Street, Canyon Crest Drive, University Avenue, and Martin Luther King Jr. Boulevard. Noise walls may be advisable to screen existing and proposed facilities located near the I-215/SR-60 freeway.
- (iii) Adequate acoustic insulation would be added to residence halls to ensure that the interior Ldn would not exceed 45 dBA during the daytime and 40 dBA during the nighttime (10 P.M. to 7 A.M.) in rooms facing major streets.
- (iv) Potential noise impacts would be evaluated as part of the design review for all projects. If determined to be significant, mitigation measures would be identified and alternatives suggested. At a minimum, campus residence halls and student housing design would comply with Title 24, Part 2 of the California Administrative Code.

- PP 4.10-2 The UCR campus shall limit the hours of exterior construction activities from 7:00 A.M. to 9:00 P.M. Monday through Friday and 8:00 A.M. to 6:00 P.M. on Saturday when necessary. Construction traffic shall follow transportation routes prescribed for all construction traffic to minimize the impact of this traffic (including noise impacts) on the surrounding community.
- PP 4.10-5(a) The Campus shall continue to provide on-campus housing to continue the evolution of UCR from a commuter to a residential campus.
- PP 4.10-5(b) The Campus shall continue to implement an Alternative Transportation program that facilitates and promotes the use of transit, carpools, vanpools, and bicycling.
- PP 4.10-6 The Campus shall continue to shield all new stationary sources of noise that would be located in close proximity to noise-sensitive buildings and uses.
- PP 4.10-7(a) To the extent feasible, construction activities shall be limited to 7:00 A.M. to 9:00 P.M. Monday through Friday, 8:00 A.M. to 6:00 P.M. on Saturday, and no construction on Sunday and national holidays, as appropriate, in order to minimize disruption to area residences surrounding the campus and to on-campus uses that are sensitive to noise.
- PP 4.10-7(b) The Campus shall continue to require by contract specifications that construction equipment be required to be muffled or otherwise shielded. Contracts shall specify that engine-driven equipment be fitted with appropriate noise mufflers.
- PP 4.10-7(c) The Campus shall continue to require that stationary construction equipment material and vehicle staging be placed to direct noise away from sensitive receptors.
- PP 4.10-7(d) The Campus shall continue to conduct regular meetings, as needed, with on campus constituents to provide advance notice of construction activities in order to coordinate these activities with the academic calendar, scheduled events, and other situations, as needed.
- PP 4.10-8 The Campus shall continue to conduct meetings, as needed, with off-campus constituents that are affected by campus construction to provide advance notice of construction activities and ensure that the mutual needs of the particular construction project and of those impacted by construction noise are met, to the extent feasible.

### ***Public Services***

- PP 4.12-1(a) As development occurs, the following measures will be incorporated:
- (i) New structures would be designed with adequate fire protection features in compliance with State law and the requirements of the State Fire Marshal. Building designs would be reviewed by appropriate campus staff and government agencies.

(ii) Prior to implementation of individual projects, the adequacy of water supply and water pressure will be determined in order to ensure sufficient fire protection services.

(iii) Adequate access will be provided to within 50 feet of the main entrance of occupied buildings to accommodate emergency ambulance service.

(iv) Adequate access for fire apparatus will be provided within 50 feet of stand pipes and sprinkler outlets.

(v) Service roads, plazas, and pedestrian walks that may be used for fire or emergency vehicles will be constructed to withstand loads of up to 45,000 pounds.

(vi) As implementation of the LRDP occurs, campus fire prevention staffing needs would be assessed; increases in staffing would be determined through such needs assessments.

PP 4.12-1(b) (i) Accident prevention features shall be reviewed and incorporated into new structures to minimize the need for emergency response from the City of Riverside.

(ii) Increased staffing levels for local fire agencies shall be encouraged to meet needs generated by LRDP project related on-campus population increases.

PP 4.12-2(a) As development under the LRDP occurs, the Campus will hire additional police officers and support staff as necessary to maintain an adequate level of service, staff, and equipment, and will expand the existing police facility when additional space is required.

PP 4.12-2(b) The Campus will continue to participate in the "UNET" program (for coordinated police response and staffing of a community service center), which provides law enforcement services in the vicinity of the campus, with equal participation of UCR and City police staffs.

### ***Traffic and Transportation***

PP 4.14-1 The Campus shall continue to implement a Transportation Demand Management program that meets or exceeds all trip reduction and AVR requirements of the SCAQMD. The TDM program may be subject to modification as new technologies are developed or alternate program elements are found to be more effective.

(This is identical to Air Quality PP 4.3-1.)

PP 4.14-2 The Campus will periodically assess construction schedules of major projects to determine the potential for overlapping construction activities to result in periods of heavy construction vehicle traffic on individual roadway segments,

and adjust construction schedules, work hours, or access routes to the extent feasible to reduce construction-related traffic congestion.

PP 4.14-4 The Campus shall provide design professionals for roadway and parking improvements with the Campus Design Guidelines and instructions to implement those elements of the guidelines relevant to parking and roadway design.

PP 4.14-5 To the extent feasible, the Campus shall maintain at least one unobstructed lane in both directions on campus roadways. At any time only a single lane is available, the Campus shall provide a temporary traffic signal, signal carriers (i.e., flagpersons), or other appropriate traffic controls to allow travel in both directions. If construction activities require the complete closure of a roadway segment, the Campus shall provide alternate routes and appropriate signage.

(This is identical to Hazards and Hazardous Materials PP 4.7-7(a).)

PP 4.14-6 For any construction-related closure of pedestrian routes, the Campus shall provide alternate routes and appropriate signage and provide curb cuts and street crossings to assure alternate routes are accessible.

PP 4.14-8 To maintain adequate access for emergency vehicles when construction projects would result in roadway closures, the Office of Design and Construction shall consult with the UCPD, EH&S, and the RFD to disclose roadway closures and identify alternative travel routes.

(This is identical to Hazards and Hazardous Materials PP 4.7-7(b).)

## ***Utilities***

PP 4.15-1(a) Improvements to the campus water distribution system, including necessary pump capacity, will be made as required to serve new projects. Project-specific CEQA analysis of environmental effects that would occur prior to project-specific approval will consider the continued adequacy of the domestic/fire water systems, and no new development would occur without a demonstration that appropriate domestic/fire water supplies continue to be available.

PP 4.15-1(b) To further reduce the campus' impact on domestic water resources, to the extent feasible, UCR will

(i) Install hot water recirculation devices (to reduce water waste)

(ii) Continue to require all new construction to comply with applicable State laws requiring water-efficient plumbing fixtures, including but not limited to the

Health and Safety Code and Title 24, California Code of Regulations, Part 5 (California Plumbing Code)

(iii) Retrofit existing plumbing fixtures that do not meet current standards on a phased basis over time

(iv) Install recovery systems for losses attributable to existing and proposed steam and chilled-water systems

(v) Prohibit using water as a means of cleaning impervious surfaces

(vi) Install water-efficient irrigation equipment to local evaporation rates to maximize water savings for landscaping and retrofit existing systems over time

(This is identical to Hydrology PP 4.8-2(a).)

PP 4.15-1(c) The Campus shall promptly detect and repair leaks in water and irrigation pipes.

PP 4.15-1(d) The Campus shall avoid serving water at food service facilities except upon request.

PP 4.15-5 The Campus will continue to comply with all applicable water quality requirements established by the SARWQCB.

(This is identical to Hydrology PP 4.8-1.)

## 2005 LRDP MITIGATION MEASURES

### *Aesthetics*

- MM 4.1-3(a) Building materials shall be reviewed and approved as part of project-specific design and through approval of construction documents. Mirrored, reflective glass is prohibited on campus.
- MM 4.1-3(b) All outdoor lighting on campus resulting from new development shall be directed to the specific location intended for illumination (e.g., roads, walkways, or recreation fields) to prevent stray light spillover onto adjacent residential areas. In addition, all fixtures on elevated light standards in parking lots, parking structures, and athletic fields shall be shielded to reduce glare. Lighting plans shall be reviewed and approved prior to project-specific design and construction document approval.
- MM 4.1-3(c) Ingress and egress from new parking areas shall be designed and situated so as to minimize the impact of vehicular headlights on adjacent uses. Walls, landscaping or other light barriers will be provided. Site plans shall be reviewed and approved as part of project-specific design and construction document approval.

### *Air Quality*

- MM 4.3-2 Programs and Practices 4.3-2(a), (b), and (c), or their equivalent, shall be included in construction contract specifications. The contract specifications shall require the use of low NO<sub>x</sub> diesel fuel and construction equipment to the extent that it is readily available at the time of development.
- MM 4.3-3 To reduce energy consumption and area-wide emission of criteria pollutants, the campus shall annually inspect and enforce an emissions reduction control strategy, which may include, where feasible, the following:

#### **Design**

- Use light-colored roof materials to reduce heat gain
- Orient buildings to the north and include passive solar design features
- Increase building and attic insulation beyond Title 24 requirements
- Provide electric vehicle charging systems at convenient location in campus parking facilities
- Provide prominent website and/or kiosks displaying information about alternative transportation

- Install electrical outlets outside buildings for the use of electric landscape maintenance equipment

### **Operation**

- Implement a subsidized vanpool program
- Implement staggered or compressed work schedules to reduce vehicular traffic
- Use alternative fuel shuttle buses to reduce intra-campus vehicle trips
- Provide shuttle service to major off-campus activity centers and Metrolink station(s)
- Aggressive expansion of the campus TDM program to achieve an AVR of 1.5
- Expand transit subsidies to encourage use of public transit
- Implement incentives for telecommuting
- Convert campus fleet to low emission, alternative fuel, and electric vehicles over time
- Implement solar or low-emission water heaters
- Implement an educational program for faculty and staff and distribute information to students and visitors about air pollution problems and solutions

### ***Biological Resources***

MM 4.4-1(a) To ensure that potential impacts to special status plant and wildlife species that are known to occur within the Natural and Naturalistic areas of the campus or have a moderate or greater potential to occur are reduced to less than significant levels, the campus shall conduct surveys for special-status species prior to disturbance of areas or habitat that are known to support the species. The University shall conduct surveys of the area(s) in accordance with applicable protocols or guidelines developed by the CDFG and/or USFWS, as applicable.

MM 4.4-1(b) If surveys determine that special-status plant or animal species are present, the following measures shall be implemented:

- (i) Vegetation: If sensitive plant species or habitats are observed and would be impacted by project-related activities, a qualified botanist shall develop a species or habitats-specific replacement plan. This plan shall include elements to limit project impacts such as the relocation of individual specimens, the collection of seeds and replanting, or the

preservation and movement of topsoil that contains the seed bank. If replacement within the project area is not feasible, then an approved mitigation bank shall be used. For either case, on-site or off-site revegetation, a mitigation monitoring plan shall be prepared and approved by the CDFG prior to start of construction.

- (ii) Wildlife: If special status wildlife is found within areas of proposed construction and avoidance is not feasible, the campus will consult with the appropriate agencies, obtain any necessary State or federal permits, and prepare a mitigation plan for those special-status species that would be impacted. The mitigation plan would be subject to the approval of applicable State and/or federal agencies, and may include measures such as the relocation of the affected species, protection of other on-campus habitat where the plant or animal is known to occur, or site preparation and revegetation to create suitable habitat.

MM 4.4-3(a) When habitat that could be regulated by the Clean Water Act (Section 404) would be impacted, either directly or indirectly, the University shall perform a jurisdictional and/or wetland delineation to assess the extent of the jurisdictional area(s).

MM 4.4-3(b) If wetland or riparian habitat would be removed as a result of project development, the University shall restore or enhance wetland or riparian habitat as required by the applicable State and/or federal resource agencies.

MM 4.4-3(c) Any proposal for wetland creation or enhancement (pursuant to MM 4.4-3(b) above) will be based upon the completion of soils, hydrologic and other studies confirming the feasibility of the creation or enhancement proposal and shall include United States Army Corps of Engineers (USACE)-approved measures intended to promote occupancy by special status and other wetland-dependent species (e.g., plantings, collection of topsoil and inoculation of target areas).

MM 4.4-4(a) Prior to the onset of construction activities that would result in the removal of mature trees that would occur between March and mid-August, surveys for nesting special status avian species and raptors shall be conducted on the affected portion of the campus following USFWS and/or CDFG guidelines. If no active avian nests are identified on or within 250 feet of the construction site, no further mitigation is necessary.

MM 4.4-4(b) If active nests for avian species of concern or raptor nests are found within the construction footprint or a 250-foot buffer zone, exterior construction activities shall be delayed within the construction footprint and buffer zone until the young have fledged or appropriate mitigation measures responding to the specific situation have been developed and implemented in consultation with USFWS and CDFG

## *Cultural Resources*

- MM 4.5-1(a) Before altering or otherwise affecting a building or structure 50 years old or older, the campus shall retain a qualified architectural historian to evaluate the potential significance of the building, using the significance criteria set forth for historic resources under CEQA Guidelines Section 15064.5. The evaluation process shall include the development of appropriate historical background research as context for the assessment of the significance of the structure in the history of the University system, the campus, and the region. For historic buildings, structures, or features that do not meet the CEQA criteria for historical resource, no further mitigation is required and the impact is less than significant.
- MM 4.5-1(b) The University shall follow the Secretary of the Interior's Standards for Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (Weeks and Grimmer 1995) or the State Historical Building Code, as appropriate when making modifications to historic structures eligible for NRHP or CRHR listing.
- MM 4.5-2(a) For any proposal to demolish a structure or building that has been determined by a qualified architectural historian to qualify as an historical resource and where it has been determined that avoidance is not feasible, documentation and treatment shall be carried out as described below:
- (i) If preservation and reuse at the site are not feasible, the historical building shall be documented as described in item (ii) and, when physically and financially feasible, be moved and preserved or reused.
  - (ii) If a significant historic building or structure is proposed to be demolished, the campus shall ensure that a qualified architectural historian thoroughly documents the building and associated landscaping and setting. Documentation shall include still and video photography and a written documentary record of the building to the standards of the Historic American Building Survey (HABS) or Historic American Engineering Record (HAER), including accurate scaled mapping, architectural descriptions, and scaled architectural plans, if available. A copy of the record shall be deposited with the University archives, Rivera Library Special Collections. The record shall be accompanied by a report containing site-specific history and appropriate contextual information. This information shall be gathered through site specific and comparative archival research, and oral history collection as appropriate.

## *Hazards and Hazardous Materials*

- MM 4.7-4 Prior to development on former agricultural lands, appropriate soil testing shall be performed to determine whether chemical residue is present from prior activities in amounts that would pose health hazards to construction workers and/or occupants of new buildings. If contamination is determined to be present, PP 4.7-4 shall be implemented.

- MM 4.7-7(a) Evacuation zones designated in the UCR Emergency Operations Plan will be avoided, to the extent feasible, when siting construction staging areas. Where evacuation zones cannot be avoided, alternative evacuation zones shall be identified. UCPD and the Riverside Fire Department shall be notified of alternative evacuation zones so that they can respond accordingly to any emergencies.
- MM 4.7-7(b) The campus Emergency Operations Plan shall be reviewed on an annual basis and updated as appropriate to account for new on-campus development, which may require changes to the plan, such as revised locations for Campus Evacuation Zones.
- MM 4.7-8(a) Provide landscaping around development areas adjacent to preserved open space that emphasizes native or traditional plant material where appropriate and provides a transition to developed areas in a manner that minimizes dense vegetation immediately adjacent to structural development. Landscaping shall be shown on building plans, and plans shall be reviewed and approved for conformance with this measure prior to project design approval and project-specific construction documents.
- MM 4.7-8(b) Implement annual fuel management procedures to maintain a firebreak between the undeveloped areas and structures.

### *Hydrology and Water Quality*

- MM 4.8-9(a) Prior to design approval, the campus will review the plans for all structures to be constructed in the 100-year floodplain for compliance with the following FEMA requirements for nonresidential structures:
- (i) Elevate the lowest floor (including the basement) to or above the base flood level; or
  - (ii) Together with attendant utility and sanitary facilities, design so that below the base flood level, the structure is watertight with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy; and
  - (iii) Require that fully enclosed areas below the lowest floor that are subject to flooding be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for entry and exit of flood waters.
- MM 4.8-9(b) For structures placed within the 100-year floodplain, flood control devices will be designed to direct flows toward areas where flood hazards will be minimal.

## *Land Use*

Implementation of the following Mitigation Measures would assure consistency with applicable land use plans and policies:

- MM 4.4-1(a) and (b)
- MM 4.4-3(a) and (b)
- MM 4.4-4(a) and (b)
- MM 4.5-1
- MM 4.5-2
- MM 4.6-1(a)
- MM 4.7-8(a) and (b)
- MM 4.8-9(a) and (b)

## *Noise*

MM 4.10-2                      The campus shall notify all academic and residential facilities within 300 feet of approved construction sites of the planned schedule of vibration causing activities so that the occupants and/or researchers can take necessary precautionary measures to avoid negative effects to their activities and/or research.

## *Traffic and Transportation*

MM 4.14-1(a)                      The intersection of 3rd Street/Chicago Avenue would require an additional left-turn lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)

MM 4.14-1(b)                      In addition to the improvements identified for the 'Without Project' scenario, the intersection of Blaine Street/Iowa Avenue would require an additional left-turn lane on the eastbound approach, and a separate through and right-turn lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)

MM 4.14-1(c)                      In addition to the improvements identified for the 'Without Project' scenario, the intersection of University Avenue/Chicago Avenue would require a separate through and a right-turn lane on the southbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)

MM 4.14-1(d)                      The intersection of University Avenue/Iowa Avenue would require an additional left-turn lane on the eastbound approach to operate at LOS D or better. The

approach currently consists of one left-turn lane, two through lanes, and one right-turn lane. The mitigated approach would consist of two left-turn lanes, one through lane, and one shared through/right-turn lane. (This intersection is under the jurisdiction of the City of Riverside.)

- MM 4.14-1(e) In addition to the improvements identified for the 'Without Project' scenario, the intersection of Martin Luther King Boulevard/Chicago Avenue would require an additional through lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(f) In addition to the improvements identified for the 'Without Project' scenario, the intersection of Martin Luther King Boulevard/Canyon Crest Drive would require an additional left-turn lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(g) The intersection of Linden Street/Aberdeen Drive would require a shared through /left-turn lane and a right-turn lane on the eastbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the University.) Please note that this is a T-intersection.
- MM 4.14-1(h) In addition to the improvements identified for the 'Without Project' scenario, the intersection of Blaine Street/Iowa Avenue would require an additional left-turn lane on the southbound approach, an additional left-turn lane on the eastbound approach, an additional left-turn lane on the westbound approach, and a separate through and right-turn lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(i) The intersection of University Avenue/Iowa Avenue would require an additional left-turn lane on the eastbound approach, and a separate through and right lane on the southbound approach to operate at LOS D or better. The southbound approach currently consists of one left-turn lane, one through lane, and one shared through/right-turn lane. The mitigated southbound approach would consist of one left-turn lane, two through lanes, and one right-turn lane. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(j) The intersection of Martin Luther King Boulevard/Chicago Avenue would require an additional through and an additional right-turn lane on the eastbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(k) In addition to the improvements identified for the 'Without Project' scenario, the intersection of Martin Luther King Boulevard/Canyon Crest Drive would require an additional left-turn lane on the westbound approach to operate at LOS D or better. (This intersection is under the jurisdiction of the City of Riverside.)
- MM 4.14-1(l) The intersection of Linden Street/Aberdeen Drive would require a shared through/left-turn lane and a right-turn lane on the eastbound approach to

operate at LOS D or better. (This intersection is under the jurisdiction of the University.)

MM 4.14-10(a) The campus shall work with the City of Riverside to monitor the demand for off-campus parking in residential neighborhoods or at commercial establishments to determine whether use of off-campus parking by the campus population is substantially restricting availability for neighborhood residents or patrons of commercial establishments.

MM 4.14-10(b) If the campus and the City of Riverside mutually determine that use of off-campus parking by members of the campus population has substantially restricted availability to residents and patrons of commercial establishments, the campus and the City will work cooperatively to implement appropriate measures, which may include, but not be limited to:

- (i) Increased enforcement of existing parking regulations,
- (ii) Changes in parking regulations (e.g., time restrictions for on-street parking), and
- (iii) A permit parking program for affected residential neighborhoods and/or commercial facilities.

MM 4.14-11 If on-campus parking is not available, off-site construction worker parking shall be provided with shuttle service to the remote parking location

MM 4.14-13 As part of the Multi-modal Transportation Program, the UCR Transportation and Parking Services department will work with transit service providers on an annual basis to monitor demand for transit services, to identify needed service improvements, and encourage the implementation of any such improvements.

### ***Utilities***

MM 4.15-6(a) UCR will work with the City of Riverside to evaluate the capacity of existing sewer trunk lines serving the campus and estimate the future impact of LRDP implementation on available capacity.

MM 4.15-6(b) If the study of sewer trunk line capacity determines that available capacity would be exceeded, UCR and the City will negotiate payment of fair share of improvements to provide sufficient discharge capacity to meet campus needs. UCR shall contribute its fair share payments and additional required trunk line capacity shall be provided by the City prior to exceedance of sewer trunk line capacity.

## 2005 LRDP AMENDMENT 2 MITIGATION MEASURES

### *Air Quality*

MM 4.3-1a For each construction project on the campus, the project contractor will implement Programs and Practices 4.3-2(a) and 4.3-2(b).

In addition, the following PM10 and PM2.5 control measure shall be implemented for each construction project:

- Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The phone number of the District shall also be visible to ensure compliance.

MM 4.3-1b For each construction project on the campus, the University shall require that the project include a construction emissions control plan that includes a comprehensive inventory of all off-road construction equipment, equal to or greater than 50 horsepower, that will be used for an aggregate of 40 or more hours during any portion of the construction project. During construction activity, the contractor shall utilize CARB certified equipment or better for all on-site construction equipment according to the following schedule:

- January 1, 2011 to December 31, 2011: All off-road diesel-powered construction equipment greater than 50 hp shall meet Tier 2 off-road emissions standards. In addition, all construction equipment shall be outfitted with the BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 2 or Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- January 1, 2012 to December 31, 2014: All off-road diesel-powered construction equipment greater than 50 hp shall meet Tier 3 off-road emissions standards. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- Post January 1, 2015: All off-road diesel-powered construction equipment greater than 50 hp shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.

- A copy of each unit's certified specification, BACT documentation and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit or equipment.
- Encourage construction contractors to apply for AQMD "SOON" funds. Incentives could be provided for those construction contractors who apply for AQMD "SOON" funds. The "SOON" program provides funds to accelerate clean-up of off-road diesel vehicles, such as heavy duty construction equipment. More information on this program can be found at the following website: <http://www.aqmd.gov/tao/implementation/soonprogram.htm>
- The contractor shall also implement the following measures during construction:
  - Prohibit vehicle and engine idling in excess of 5 minutes and ensure that all off-road equipment is compliant with the California Air Resources Board's (CARB) in-use off-road diesel vehicle regulation and SCAQMD Rule 2449.
  - Configure construction parking to minimize traffic interference.
  - Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.
  - Provide dedicated turn lanes for movement of construction trucks and equipment on- and off site.
  - Schedule construction activities that affect traffic flow on the arterial system to off-peak hour to the extent practicable.
  - Improve traffic flow by signal synchronization, and ensure that all vehicles and equipment will be properly tuned and maintained according to manufacturers' specifications.
  - Use diesel-powered construction vehicles and equipment that operate on low-NOx fuel where possible.
  - Reroute construction trucks away from congested streets or sensitive receptor areas.
  - Maintain and tune all vehicles and equipment according to manufacturers' specifications.

MM 4.3-1c

To minimize VOC emissions from the painting/finishing phase, for each construction project on the campus, the project contractor will implement the following VOC control measures:

- Construct or build with materials that do not require painting, or use pre-painted construction materials.
- If appropriate materials are not available or are cost-prohibitive, use low VOC content materials more stringent than required under SCAQMD Rule 113.

MM 4.3-2a

The Campus will:

- Implement a subsidized vanpool program.
- Implement staggered or compressed work schedules to reduce vehicular traffic.
- Use alternative fuel Shuttle buses to reduce intra-campus vehicle trips.
- Provide Shuttle service to major off-campus activity centers and Metrolink stations.
- Aggressive expansion of the campus TDM program to achieve an AVR of 1.5.
- Expand transit subsidies to encourage use of public transit.
- Implement incentives for telecommuting.
- Convert campus fleet to low-emission, alternative fuel and electric vehicles over time.
- Implement solar or low-emission water heaters.
- Implement an educational program for faculty and staff and distribute information to students and visitors about air pollution problems and solutions.

MM 4.3-2b

UCR shall continue to participate in greenhouse gas (GHG) reduction programs such as the American College and University Presidents' Climate Commitment (ACUPCC) and shall adhere to the UC Policy on Sustainable Practices. The measures adopted by UCR are presented in Tables 4.16-9 and 4.16-10 in Section 4.16 Greenhouse Gas Emissions. While these measures are typically targeted at GHG emissions, many act to reduce energy consumption and vehicle use on campus and would consequently also reduce air pollutant emissions from both area and mobile sources. In accordance with the ACUPCC and the UC Policy on Sustainable Practices and through implementation of its Climate Action Plan, UCR shall commit to reducing GHG emissions to 1990 levels by 2020, which would require significant reductions (on the order of 70 percent) from these sources in terms of GHG and therefore reductions in other air pollutants as well.

MM 4.3-6 The University will implement Mitigation Measure 4.3-1, which is designed to reduce construction emissions. It will also implement Mitigation Measure 4.3-2b which will reduce air pollutant emissions resulting from traffic and energy consumption during campus operations.

MM 4.3-7 The Campus will implement Mitigation Measure 4.3-2b, which will reduce traffic associated with campus operations.

### *Noise*

MM 4.10-2 The Campus shall notify all academic and residential facilities within 300 feet of approved construction sites of the planned schedule of vibration causing activities so that the occupants and/or researchers can take necessary precautionary measures to avoid negative effects to their activities and/or research.

### *Public Services*

MM 4.12-1 Should the City propose the construction of a new fire station to serve the campus and its surrounding areas, and the analysis of the environmental effects of the fire station project indicate that there would be potentially significant impacts requiring mitigation, the University will pay its proportional share of the cost of the environmental mitigation required for the project.

### *Traffic and Transportation*

MM 4.14-1a Reconfigure the intersection of Parking Lot 1/Campus Drive to add a lane to the eastbound approach that would result in a joint left-turn/through lane with a separate right-turn lane and signalize intersection.

MM 4.14-1b Travel Demand Management. To reduce on- and off-campus vehicle trips and resulting impacts, the University will enhance its Transportation Demand Management (TDM) program. TDM strategies will include measures to increase transit and Shuttle use, encourage alternative transportation modes including bicycle transportation, implement parking policies that reduce demand, and other mechanisms that reduce vehicle trips to and from the campus. The University shall monitor the performance of campus TDM strategies through annual surveys.

MM 4.14-1c Transit Enhancement. To enhance transit systems serving the campus, the University will work cooperatively with the RTA, and other local agencies to coordinate service routes with existing and proposed Shuttle and transit programs.

MM 4.14-1d Sustainability and Monitoring. The University shall review individual projects proposed under the amended 2005 LRDP for consistency with UC sustainable transportation policy and UCR TDM strategies to ensure that bicycle and pedestrian improvements, alternative fuel infrastructure, transit stops, and other

project features that promote alternative transportation are incorporated into each project to the extent feasible.

MM 4.14-1e Campus Traffic Impact Monitoring. The University will conduct traffic counts at key gateway locations on the campus every five years to determine the amount of traffic generated by the campus.

MM 4.14-1f Mitigation Payments. The University's proportional share of the cost of the roadway improvements in Table 4.14-18 is determined by dividing projected LRDP-related trips by the increase in background traffic between existing conditions and 2020. The projected proportional share percentage of each improvement is provided in Table 4.14-18, but the University's actual share will be determined based on actual project trips as established by monitoring under Mitigation Measure 4.14-1e. It is anticipated that at the time that the City proposes an improvement at an affected intersection and requests a proportional share payment, the University's proportional share will be calculated using the following formula:

Campus Proportional Share % of mitigation project = (calculated impact contribution from EIR) \* (traffic growth in year X/projected LRDP traffic growth in 2020)

Where:

X = the year the mitigation project is constructed

Traffic growth in year X = gateway counts in year X - gateway counts in LRDP baseline year 2010

Projected LRDP traffic growth in 2020 = 2020 LRDP gateway forecasts from EIR - gateway counts in LRDP baseline year (2010)

The University's payment of its proportional share of the cost of the improvements will be made available to the jurisdiction no later than the start of construction of when implementation of the improvement is reasonably certain.

Contributions made by the University that exceed its proportional share of the cost of mitigation or that mitigates more than its impact may be credited towards mitigation by the University of future impacts.

## ***Utilities***

MM 4.15-2 Should the City determine that construction of new water treatment facilities or expansion of existing water treatment facilities is required in order to accommodate campus demand, and the analysis of the environmental effects of constructing or expanding these facilities indicate that there would be potentially significant impacts requiring mitigation, the University will pay its proportional share of the cost of the environmental mitigation required for the project.

- MM 4.15-3                   Should the City determine that construction of new or expanded wastewater treatment facilities is required in order to accommodate campus flows, and the analysis of the environmental effects of constructing or expanding these facilities indicate that there would be potentially significant impacts requiring mitigation, the University will pay its proportional share of the cost of the environmental mitigation required for the project.
- MM 4.15-4                   Should the City determine that construction of new wastewater conveyance facilities or expansion of existing conveyance facilities on and off campus is required in order to accommodate campus discharges, and the analysis of the environmental effects of constructing or expanding these facilities indicate that there would be potentially significant impacts requiring mitigation, the University will pay its proportional share of the cost of the environmental mitigation required for the project.
- MM 4.15-5                   Should the City determine that construction of new storm water facilities or expansion of existing storm water facilities on and off campus is required in order to accommodate campus discharges, and the analysis of the environmental effects of constructing or expanding these facilities indicate that there would be potentially significant impacts requiring mitigation, the University will pay its proportional share of the cost of the environmental mitigation required for the project.

*Greenhouse Gas Emissions*

- MM 4.16-1                   All projects developed under the amended 2005 LRDP shall be evaluated for consistency with the GHG reduction policies of the UCR CAP and the UC Policy on Sustainable Practices, as may be updated from time to time by the University. GHG reduction measures, including, but not limited to, those found within the UCR CAP and UC Policy identified in Tables 4.16-9 and 4.16-10 shall be incorporated in all campus projects so that at a minimum an 8 percent reduction in emissions from BAU is achieved. It is expected that the GHG reduction measures in the UCR CAP will be refined from time to time, especially in light of the evolving regulations and as more information becomes available regarding the effectiveness of specific GHG reduction measures. As part of the implementation of the UCR CAP, the Campus will also monitor its progress in reducing GHG emissions to ensure it will attain the established targets

**LRDP EIR Planning Strategies, Programs and Practices and Mitigation Measures  
Summary of Applicability and Implementation Status  
North District Development Plan**

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
The following information serves as a key to the coding used for the category, responsible unit, mitigation timing, and compliance action:		
<u><b>Responsible UCR Units</b></u> AG OPS: Agricultural Operations CRM: Capital Resource Management DS: Dining Services EHS: Environmental Health and Safety FS: Fleet Services HSG: Housing Services AE: Architects & Engineers PD: Police Department PP: Physical Plant TAPS: Transportation and Parking Services	<u><b>Mitigation Timing</b></u> P: Implement during programming D: Incorporate into project-specific design E: Implement during environmental documentation (CEQA) C: Implement during construction of specific projects O: Implement as an ongoing campus practice	
<u><b>Compliance Action</b></u> AP: Administrative/Planning Activity CD: Incorporate into construction contract specifications ED: Environmental Documentation FO: Field observation activity/inspections	<u><b>Category</b></u> AM: Administrative Measure PS: Project Specific SL: Service Level	
<b>PS Land Use 4</b> Pursue a goal of housing 50 percent of student enrollment in on campus or campus controlled housing. (Category: AM; Responsible Unit: CRM, HSG; Timing: P; Compliance: AP)	Part of Project. No further action required.	The proposed NDD Plan would increase on-campus housing availability for students.
<b>PS Land Use 7</b> Over time, relocate parking from central campus locations to the periphery of the academic core and replace surface parking with structures, where appropriate. (Category: AM; Responsible Unit: CRM, TAPS; Timing: P; Compliance: AP)	Part of Project. No further action required.	The parking included in the NDD Plan would provide parking at the edge of campus.
<b>PS Open Space 4</b> Provide landscaped buffers and setbacks along campus edges, such as Valencia Hill Drive and its extension south of Big Springs Road, Martin Luther King Jr. Boulevard, and the I-215/SR-60 freeway. (Category: AM; Responsible Unit: CRM; Timing: P; Compliance: AP)	Part of Project. No further action required	The proposed NDD Plan would include improvements along Watkins Drive and Blaine Street, with a new landscaped edge providing visual screening of the new buildings and parking lots/structures.
<b>PS Campus and Community 1</b> Provide sensitive land use transitions and landscaped buffers where residential off campus neighborhoods might experience noise or light from UCR activities. (Category: AM; Responsible Unit: CRM; Timing: P; Compliance: AP)	Part of Project No further action required	The proposed NDD Plan would include landscaped buffers and setbacks along Blaine Street and Watkins Drive.

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<p><b>PS Transportation 6</b> Implement parking management measures that may include</p> <ul style="list-style-type: none"> <li>• Restricted permit availability</li> <li>• Restricted permit mobility</li> <li>• Differential permit pricing</li> </ul> <p><i>(Category: AM; Responsible Unit: TAPS; Timing: O; Compliance: AP)</i></p>	<p>Part of Project No further action required</p>	
<p><b>PS Development Strategy 1</b> Establish a design review process to provide regular review of building and landscape development on campus. <i>(Category: AM; Responsible Unit: CRM, AE; Timing: O; Compliance: AP)</i></p>	<p>Part of Project No further action required</p>	<p>The Campus and all relevant entities would review project designs to ensure compatibility with existing campus aesthetics.</p>
<b>AESTHETICS</b>		
<p><b>PP 4.1-1</b> The Campus shall provide design professionals with the 2007 Campus Design Guidelines and instructions to implement the guidelines, including those sections related to use of consistent scale and massing, compatible architectural style, complementary color palette, preservation of existing site features, and appropriate site and exterior lighting design. (This is identical to Land Use PP 4.9-1(a).) <i>(Category: PS; Responsible Unit: CRM, AE; Timing: P, D; Compliance: AP)</i></p>	<p>Part of Project No further action required</p>	<p>The campus has provided the indicated guidelines and instructions to the design team.</p>
<p><b>PP 4.1-2(a)</b> The Campus shall continue to provide design professionals with the 2007 Campus Design Guidelines and instructions to develop project-specific landscape plans that are consistent with the Guidelines with respect to the selection of plants, retention of existing trees, and use of water conserving plants, where feasible. (This is identical to Land Use PP 4.9-1(b).) <i>(Category: PS; Responsible Unit: CRM, AE; Timing: P, D; Compliance: AP)</i></p>	<p>Part of Project No further action required</p>	<p>The campus has provided the indicated guidelines and instructions to the design team.</p>
<p><b>PP 4.1-2(b)</b> The campus shall continue to relocate, where feasible, mature “specimen” trees that would be removed as a result of construction activities on the campus. (This is identical to Land Use PP 4.9-1(c).) <i>(Category: AM, PS; Responsible Unit: AE, PP; Timing: P, D, E, O; Compliance: AP, CD)</i></p>	<p>Part of Project No further action required</p>	<p>The campus has provided the indicated guidelines and instructions to the design team.</p>
<p><b>MM 4.1-3(a)</b> Building materials shall be reviewed and approved as part of project-specific design and through approval of construction documents. Mirrored, reflective glass is prohibited on campus. <i>(Category: PS; Responsible Unit: AE; Timing: D; Compliance: CD)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>The proposed project has been subject to a design review process. Project design does not include reflective glass.</p>
<p><b>MM 4.1-3(b)</b> All outdoor lighting on campus resulting from new development shall be directed to the specific location intended for illumination (e.g., roads, walkways, or recreation fields) to prevent stray light spillover onto adjacent residential areas. In addition, all fixtures on elevated light standards in parking lots, parking structures, and athletic fields shall be shielded to reduce glare. Lighting plans shall be reviewed and approved prior to project-specific design and construction document approval. <i>(Category: PS; Responsible Unit: AE, PP, TAPS; Timing: D, O; Compliance: AP, CD)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>Project lighting will be directed downward and shielded to prevent glare.</p>
<p><b>MM 4.1-3(c)</b> Ingress and egress from new parking areas shall be designed and situated so as to minimize the impact of vehicular headlights on adjacent uses. Walls, landscaping or other light barriers will be provided. Site plans shall be reviewed and approved as part of project-specific design and construction document approval. <i>(Category: PS; Responsible Unit: AE, TAPS; Timing: D, O; Compliance: AP, CD)</i></p>	<p>Part of Project No further action required</p>	<p>The proposed project has been subject to a design review process.</p>

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<b>GREENHOUSE GAS EMISSIONS</b>		
<p><b>MM 4.3-1:</b> All projects developed under the amended 2005 LRDP shall be evaluated for consistency with the GHG reduction policies of the UCR CAP and UC Policy on Sustainable Practices, as may be updated from time to time by the University. GHG reduction measures, including, but not limited to, those found within the UCR CAP and UC Policy identified in Table 4.3-6 and 4.3-7 shall be incorporated in all campus projects so that at a minimum an 8 percent reduction in emissions from BAU is achieved. It is expected that the GHG reduction measures in the UCR CAP will be refined from time to time, especially in light of the evolving regulations and as more information becomes available regarding the effectiveness of specific GHG reduction measures. As part of the implementation of the UCR CAP, the Campus will also monitor its progress in reducing GHG emissions to ensure it will attain the established targets.</p> <p><i>(Category: AM, PS; Responsible Unit: CRM, EH&amp;S; Timing: P, D, C, O; Compliance: AP)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>The project includes appropriate GHG reduction measures.</p>
<b>HAZARDS AND HAZARDOUS MATERIALS</b>		
<p><b>PP 4.7-1</b> The Campus shall continue to implement the current (or equivalent) health and safety plans, programs, and practices related to the use, storage, disposal, or transportation of hazardous materials, including, but not necessarily limited to, the Business Plan, the Broadscope Radioactive Materials License, and the following programs: Biosafety, Emergency Management, Environmental Health, Hazardous Materials, Industrial Hygiene and Safety, Laboratory/Research Safety, Radiation Safety, and Integrated Waste Management. These programs may be subject to modification as more stringent standards are developed or if the programs are replaced by other programs that incorporate similar health and safety protection measures. <i>(Category: AM, SL; Responsible Unit: EHS; Timing: C,O; Compliance: AP,FO)</i></p>	<p>Part of Project Ongoing Campus-wide Program Ongoing oversight throughout design, construction and operation</p>	<p>Relevant aspects of these plans will be implemented in the course of normal operations during construction and ongoing operation.</p>
<p><b>PP 4.7-2</b> The campus shall perform hazardous materials surveys on buildings and soils, if applicable, prior to demolition. When remediation is deemed necessary, surveys shall identify all potential hazardous materials within the structure to be demolished, and identify handling and disposal practices. The campus shall follow the practices during building demolition to ensure construction worker and public safety. <i>(Category: PS; Responsible Unit: EHS,AE; Timing: P, D, E, C, O; Compliance: CD, FO)</i></p>	<p>Part of Project Ongoing oversight throughout design and demolition</p>	<p>Asbestos surveys of the existing housing have been conducted.</p>
<p><b>PP 4.7-3</b> The Campus will inform employees and students of hazardous materials minimization strategies applicable to research, maintenance, and instructional activities, and require the implementation of these strategies where feasible. Strategies include but are not limited to the following:</p> <ul style="list-style-type: none"> <li>(i) Maintenance of online database by EH&amp;S of available surplus chemicals retrieved from laboratories to minimize ordering or new chemicals.</li> <li>(ii) Shifting from chemical usage to micro techniques as standard practice for instruction and research, as better technology becomes available.</li> </ul> <p><i>(Category: SL; Responsible Unit: EHS; Timing: O; Compliance: AP, FO)</i></p>	<p>Ongoing Campus-wide Program Ongoing oversight throughout design, construction and operation</p>	<p>Relevant hazardous materials minimization strategies will be implemented the course of normal operations during ongoing operation.</p>

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<b>HAZARDS AND HAZARDOUS MATERIALS (continued)</b>		
<p><b>MM 4.7-1</b> Prior to the commencement of demolition activities, a Soil Management Plan (SMP) shall be prepared per DTSC guidelines and submitted to the DTSC for their review and approval. The SMP shall discuss various methods for the excavation and removal of soil around all structures, at a volume three feet deep and three feet away. On-site soil excavation personnel shall be licensed and trained to properly handle hazardous materials encountered at, and removed from, the site.</p> <p><i>(Category: PS; Responsible Unit: AG OPS,EHS,AE,PP; Timing: P, D, E, C, O; Compliance: ED)</i></p>	Part of Project Ongoing oversight through design and demolition	
<p><b>PP 4.7-7(a)</b> To the extent feasible, the campus shall maintain at least one unobstructed lane in both directions on campus roadways. At any time only a single lane is available, the campus shall provide a temporary traffic signal, signal carriers (i.e., flagpersons), or other appropriate traffic controls to allow travel in both directions. If construction activities require the complete closure of a roadway segment, the campus shall provide appropriate signage indicating alternative routes. (This is identical to Transportation and Traffic PP 4.14-5.)</p> <p><i>(Category: PS, SL; Responsible Unit: AE,PP,TAPS; Timing: O, C; Compliance: CD,FO)</i></p>	Part of Project Ongoing oversight through design and construction	
<p><b>PP 4.7-7(b)</b> To maintain adequate access for emergency vehicles when construction projects would result in roadway closures, the Office of Design and Construction<sup>1</sup> shall consult with the UCPD, EH&amp;S, and the RFD to disclose roadway closures and identify alternative travel routes. (This is identical to Transportation and Traffic PP 4.14-8.) <i>(Category: PS, SL; Responsible Unit: AE,PP; Timing: O, C; Compliance: CD,FO)</i></p>	Part of Project Ongoing oversight through design and construction	The UCR Office of Architects & Engineers must conduct this coordination prior to any roadway closures.
<b>LAND USE AND PLANNING</b>		
<p><b>PP 4.9-1(a)</b> Provide design professionals with 2007 Campus Design Guidelines See PP 4.1-1</p>	Part of Project	See PP 4.1-1
<p><b>PP 4.9-1(b)</b> Provide design professionals with the 2007 Campus Design Guidelines See PP 4.1-2(a).</p>	Part of Project	See PP 4.1-2(a)
<b>NOISE</b>		
<p><b>PP 4.10-1(a)</b> UCR will incorporate the following siting design measures to reduce long-term noise impacts:</p>		
<p>(i) Truck access, parking area design, and air conditioning/refrigeration units will be designed and evaluated when planning specific individual new facilities to minimize the potential for noise impacts to adjacent developments.</p>	Part of Project No further action required	The project has been designed to consider noise generation and exposure to on- and off-campus residences.
<p>(ii) Building setbacks, building design and orientation will be used to reduce intrusive noise at sensitive student residential and educational building locations near main campus access routes, such as Blaine Street, Canyon Crest Drive, University Avenue, and Martin Luther King Jr. Boulevard. Noise walls may be advisable to screen existing and proposed facilities located near the I-215/SR-60 freeway.</p>	Part of Project No further action required	
<p>(iii) Adequate acoustic insulation would be added to residence halls to ensure that the interior L<sub>dn</sub> would not exceed 45 dB(A) during the daytime and 40 dB(A) during the nighttime (10 PM to 7 AM) in rooms facing major streets.</p>	Not applicable	

<sup>1</sup> Office Design and Construction has been renamed the Office of Planning, Design, and Construction.

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<p>(iv) Potential noise impacts would be evaluated as part of the design review for all projects. If determined to be significant, mitigation measures would be identified and alternatives suggested. At a minimum, campus residence halls and student housing design would comply with Title 24, Part 2 of the California Administrative Code.</p> <p><i>(Category: PS; Responsible Unit: AE; Timing: P, D; Compliance: AP, CD, ED)</i></p>	<p>Part of Project No further action required</p>	<p>The project has been designed to consider noise generation and exposure to on- and off-campus residences.</p>
<p><b>PP 4.10-2</b> The UCR Campus shall limit the hours of exterior construction activities from 7:00 AM to 9:00 PM. Monday through Friday and 8:00 AM. to 6:00PM. on Saturday when necessary. Construction traffic shall follow transportation routes prescribed for all construction traffic to minimize the impact of this traffic (including noise impacts) on the surrounding community.</p> <p><i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: CD)</i></p>	<p>Part of Project Ongoing oversight through construction documents and during construction</p>	<p>This is a standard component of campus construction projects.</p>
<p><b>PP 4.10-5(b)</b> The Campus shall continue to implement an Alternative Transportation program that facilitates and promotes the use of transit, carpools, vanpools, and bicycling. <i>(Category: AM, SL; Responsible Unit: TAPS; Timing: O; Compliance: AP)</i></p>	<p>Ongoing Campus-wide Program</p>	<p>The project will not conflict with the campus's Alternative Transportation program.</p>
<p><b>PP 4.10-6</b> The Campus shall continue to shield all new stationary sources of noise that would be located in close proximity to noise-sensitive buildings and uses. <i>(Category: PS; Responsible Unit: AE, PP; Timing: P, D, E, C, O; Compliance: AP, CD)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	
<p><b>PP 4.10-7(a)</b> To the extent feasible, construction activities shall be limited to 7:00 AM to 9:00 PM. Monday through Friday, 8:00 AM to 6:00 PM on Saturday, and no construction on Sunday and national holidays, as appropriate, in order to minimize disruption to area residences surrounding the campus and to on-campus uses that are sensitive to noise. <i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: CD)</i></p>	<p>Part of Project</p>	<p>See PP 4.10-2</p>
<p><b>PP 4.10-7(b)</b> The Campus shall continue to require by contract specifications that construction equipment be required to be muffled or otherwise shielded. Contracts shall specify that engine-driven equipment be fitted with appropriate noise mufflers. <i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: CD)</i></p>	<p>Part of Project Ongoing oversight through construction documents and during construction</p>	<p>This is a standard component of campus construction projects.</p>
<p><b>PP 4.10-7(c)</b> The Campus shall continue to require that stationary construction equipment material and vehicle staging be placed to direct noise away from sensitive receptors. <i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: CD)</i></p>	<p>Part of Project Ongoing oversight through construction documents and during construction</p>	<p>This is a standard component of campus construction projects.</p>
<p><b>PP 4.10-7(d)</b> The Campus shall continue to conduct regular meetings, as needed, with on-campus constituents to provide advance notice of construction activities in order to coordinate these activities with the academic calendar, scheduled events, and other situations, as needed. <i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: AP)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard component of campus construction projects.</p>

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<p><b>PP 4.10-8</b> The Campus shall continue to conduct meetings, as needed, with off-campus constituents that are affected by campus construction to provide advance notice of construction activities and ensure that the mutual needs of the particular construction project and of those impacted by construction noise are met, to the extent feasible. <i>(Category: PS; Responsible Unit: AE, PP; Timing: C; Compliance: AP)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard component of campus construction projects.</p>
<p><b>MM 4.10-2:</b> The Campus shall notify all academic and residential facilities within 300 feet of approved construction sites of the planned schedule of vibration causing activities so that the occupants and/or researchers can take necessary precautionary measures to avoid negative effects to their activities and/or research. <i>(Category: PS; Responsible Unit: AE; Timing: C; Compliance: AP)</i></p>	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard component of campus construction projects.</p>
<b>PUBLIC SERVICES</b>		
<b>PP 4.12-1(a)</b> As development occurs, the following measures will be incorporated:		
(i) New structures would be designed with adequate fire protection features in compliance with State law and the requirements of the State Fire Marshal. Building designs would be reviewed by appropriate campus staff and government agencies.	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard element of the campus design process. The Campus Fire Marshal is a participant in the design and construction process.</p>
(ii) Prior to implementation of individual projects, the adequacy of water supply and water pressure will be determined in order to ensure sufficient fire protection services.	<p>Part of Project No further action required</p>	<p>A fire flow evaluation has been completed.</p>
(iii) Adequate access will be provided to within 50 feet of the main entrance of occupied buildings to accommodate emergency ambulance service.	<p>Part of Project No further action required</p>	<p>This is a standard element of the campus design process. The site plan (Draft EIR Figure 3.0-4) illustrates such access to the EH&amp;S Expansion building under the proposed design.</p>
(iv) Adequate access for fire apparatus will be provided within 50 feet of stand pipes and sprinkler outlets.	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard element of the campus design process. The Campus Fire Marshal is a participant in the design and construction process.</p>
(v) Service roads, plazas, and pedestrian walks that may be used for fire or emergency vehicles will be constructed to withstand loads of up to 45,000 pounds.	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard element of the campus design process. The Campus Fire Marshal is a participant in the design and construction process.</p>
(vi) As implementation of the LRDP occurs, campus fire prevention staffing needs would be assessed, increases in staffing would be determined through such needs assessments. <i>(Category: AM, PS; Responsible Unit: EHS, AE, PP; Timing: D, O; Compliance: AP, ED)</i>	<p>Ongoing Campus-wide Program</p>	<p>The Campus Fire Marshal has determined that current staffing levels are adequate.</p>
<b>PP 4.12-1(b)</b>		
(i) Accident prevention features shall be reviewed and incorporated into new structures to minimize the need for emergency response from the City of Riverside.	<p>Part of Project Ongoing oversight through design and construction</p>	<p>This is a standard element of the campus design process. The Campus Fire Marshal is a participant in the design and construction process</p>

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
(ii) Increased staffing levels for local fire agencies shall be encouraged to meet needs generated by LRDP project related on-campus population increases. <i>(Category: AM, PS, SL; Responsible Unit: EHS, AE, PP; Timing: D, O; Compliance: AP, CD)</i>	Ongoing Campus-wide Program	
<b>PP 4.12-2(a)</b> As development under the LRDP occurs, the Campus will hire additional police officers and support staff as necessary to maintain an adequate level of service, staff, and equipment, and will expand the existing police facility when additional space is required. <i>(Category: AM, SL; Responsible Unit: PD; Timing: O; Compliance: AP)</i>	Ongoing Campus-Wide Program	This is a standard element of the campus design process.
<b>PP 4.12-2(b)</b> The Campus will continue to participate in the “UNET” program (for coordinated police response and staffing of a community service center), which provides law enforcement services in the vicinity of the campus, with equal participation of UCR and City police staffs. <i>(Category: SL; Responsible Unit: PD; Timing: O; Compliance: AP)</i>	Ongoing Campus-Wide Program	This is a standard element of the campus design process.
<b>TRANSPORTATION AND TRAFFIC</b>		
<b>MM 4.14-1b: Travel Demand Management.</b> To reduce on- and off-campus vehicle trips and resulting impacts, the University will enhance its Transportation Demand Management (TDM) program. TDM strategies will include measures to increase transit and Shuttle use, encourage alternative transportation modes including bicycle transportation, implement parking policies that reduce demand, and other mechanisms that reduce vehicle trips to and from the campus. The University shall monitor the performance of campus TDM strategies through annual surveys. <i>(Category: SL; Responsible Unit: TAPS; Timing: O; Compliance: AP)</i>	Part of Project Ongoing Campus-Wide Program	See PP 4.3-1.
<b>MM 4.14-1c: Transit Enhancement.</b> To enhance transit systems serving the campus, the University will work cooperatively with the RTA, and other local agencies to coordinate service routes with existing and proposed Shuttle and transit programs. <i>(Category: SL; Responsible Unit: TAPS; Timing: O; Compliance: AP)</i>	Part of Project Ongoing Campus-Wide Program	
<b>PP 4.14-2</b> The Campus will periodically assess construction schedules of major projects to determine the potential for overlapping construction activities to result in periods of heavy construction vehicle traffic on individual roadway segments, and adjust construction schedules, work hours, or access routes to the extent feasible to reduce construction-related traffic congestion. <i>(Category: AM, PS; Responsible Unit: AE; Timing: D, C; Compliance: AP)</i>	Ongoing Campus-Wide Program Ongoing oversight through design and construction	This is a standard component of campus construction projects.
<b>PP 4.14-4</b> The Campus shall provide design professionals for roadway and parking improvements with the Campus Design Guidelines and instructions to implement those elements of the guidelines relevant to parking and roadway design. <i>(Category: PS; Responsible Unit: AE; Timing: P, D; Compliance: AP)</i>	Part of Project No further action required	The campus has provided the indicated guidelines and instructions to the design team.

2005 LRDP Planning Strategies, Programs and Practices and Mitigation Measures	Applicability	Notes
<b>UTILITIES</b>		
<b>PP 4.15-1(a)</b> Improvements to the campus water distribution system, including necessary pump capacity, will be made as required to serve new projects. Project-specific CEQA analysis of environmental effects that would occur prior to project-specific approval will consider the continued adequacy of the domestic/fire water systems, and no new development would occur without a demonstration that appropriate domestic/fire water supplies continue to be available. <i>(Category: PS; Responsible Unit: CRM, AE; Timing: P, D, E; Compliance: ED)</i>	Part of Project No further action required	Campus Physical Plant personnel have confirmed adequacy of the domestic system.
<b>PP 4.15-1(b)</b> Reduce the campus' impact on domestic water resources <i>(Category: AM; Responsible Unit: DS; Timing: O; Compliance: AP, FO)</i>	Part of Project Ongoing Campus-Wide Program	Project design would conform to Title 24 and includes features consistent with LEED certification.
<b>PP 4.15-1(c)</b> The Campus shall promptly detect and repair leaks in water and irrigation pipes. <i>(Category: SL; Responsible Unit: AG OPS, HSG, PP, TAPS; Timing: O; Compliance: AP, FO)</i>	Ongoing Campus-Wide Program	
<b>PP 4.15-1(d)</b> Serve water at food service facilities only upon request. <i>(Category: SL; Responsible Unit: PP, AE; Timing: D, O; Compliance: AP, CD, FO)</i>	Ongoing Campus-Wide Program	
<b>PP 4.15-5</b> The Campus will continue to comply with all applicable water quality requirements established by the SARWQCB. <i>(Category: AM; Responsible Unit: AG OPS, CRM, PP, AE; Timing: D, C, O; Compliance: AP, FO)</i>	Part of Project	Project design incorporates all relevant water quality requirements.

UCR North District Development Phase 1 ALL ELECTRIC - South Coast Air Basin, Annual

Project Characteristics -

Land Use - Estimates based on EIR Project Description.

Construction Phase - Schedule estimated based on information provided by the construction manager.

Trips and VMT -

Demolition - Assumes 268 units with each unit 1000 square feet.

Grading - Assumes re-grading entire site. Site has already been developed and should not require extensive grading.

Architectural Coating -

Vehicle Trips - Based on Phase 1 trip gen. 6006 daily trips. Sat/Sun uses default ratio.

Woodstoves - No woodstoves or fireplaces.

Area Coating -

Energy Use - All electric option is anticipated to use 4,000,764 kwh/year. No natural gas.

Water And Wastewater - Based on plumbing engineer calculations using plumbing code.

Solid Waste -

Construction Off-road Equipment Mitigation - Tier 4 engines to mitigate NOx emissions. Fugitive Dust mitigation reflect compliance with Rule 403.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Consistent with CEC mandatory measures and CalGreen code. UCR has a 9,600 panel, 4.3 megawatt solar array on-site. Assumes 10% of power would be generated on-site.

Water Mitigation - Consistent with CalGreen mandatory measures and PDFs.

Waste Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps -

Fleet Mix -

UCR North District Development Phase 1 ALL ELECTRIC - South Coast Air Basin, Summer

Project Characteristics -

Land Use - Estimates based on EIR Project Description.

Construction Phase - Schedule estimated based on information provided by the construction manager.

Trips and VMT -

Demolition - Assumes 268 units with each unit 1000 square feet.

Grading - Assumes re-grading entire site. Site has already been developed and should not require extensive grading.

Architectural Coating -

Vehicle Trips - Based on Phase 1 trip gen. 6006 daily trips. Sat/Sun uses default ratio.

Woodstoves - No woodstoves or fireplaces.

Area Coating -

Energy Use - All electric option is anticipated to use 4,000,764 kwh/year. No natural gas.

Water And Wastewater - Based on plumbing engineer calculations using plumbing code.

Solid Waste -

Construction Off-road Equipment Mitigation - Tier 4 engines to mitigate NOx emissions. Fugitive Dust mitigation reflect compliance with Rule 403.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Consistent with CEC mandatory measures and CalGreen code. UCR has a 9,600 panel, 4.3 megawatt solar array on-site. Assumes 10% of power would be generated on-site.

Water Mitigation - Consistent with CalGreen mandatory measures and PDFs.

Waste Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps -

Fleet Mix -

UCR North District Development Plan Future Phases ALL ELECTRIC - South Coast Air Basin, Annual

Project Characteristics -

Land Use - Estimates based on the EIR Project Description.

Construction Phase - Full NDD construction buildout is not yet planned. Schedule is provided for illustrative purposes.

Demolition - Assumes 268 units with each unit approximately 1000 square feet.

Grading - Assumes re-grading entire site. Site has already been developed and should not require extensive grading.

Architectural Coating -

Vehicle Trips - Based on September 26 Trip Generation estimates.

Woodstoves - No woodstoves or fireplaces.

Energy Use - Engineer calculated electricity use to be 14,473,977 kwh/year NDD remaining phases.

Water And Wastewater - Based on plumbing engineer calculations using plumbing code. 249,318,000 GPY total use.

Solid Waste -

Construction Off-road Equipment Mitigation - Fugitive Dust mitigation reflect compliance with Rule 403.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Consistent with CEC mandatory measures and CalGreen code. UCR has a 9,600 panel, 4.3 megawatt solar array on-site. Assumes 10% of power would be generated on-site.

Water Mitigation - Consistent with CalGreen mandatory measures and PDFs.

Waste Mitigation -

Operational Off-Road Equipment -

Stationary Sources - Emergency Generators and Fire Pumps -

UCR North District Development Plan Future Phases ALL ELECTRIC - South Coast Air Basin, Summer

Project Characteristics -

Land Use - Estimates based on the EIR Project Description.

Construction Phase - Full NDD construction buildout is not yet planned. Schedule is provided for illustrative purposes.

Demolition - Assumes 268 units with each unit approximately 1000 square feet.

Grading - Assumes re-grading entire site. Site has already been developed and should not require extensive grading.

Architectural Coating -

Vehicle Trips - Based on September 26 Trip Generation estimates.

Woodstoves - No woodstoves or fireplaces.

Energy Use - Engineer calculated electricity use to be 14,473,977 kwh/year NDD remaining phases.

Water And Wastewater - Based on plumbing engineer calculations using plumbing code. 249,318,000 GPY total use.

Solid Waste -

Construction Off-road Equipment Mitigation - Fugitive Dust mitigation reflect compliance with Rule 403.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation - Consistent with CEC mandatory measures and CalGreen code. UCR has a 9,600 panel, 4.3 megawatt solar array on-site. Assumes 10% of power would be generated on-site.

Water Mitigation - Consistent with CalGreen mandatory measures and PDFs.

Waste Mitigation -

Operational Off-Road Equipment -

Stationary Sources - Emergency Generators and Fire Pumps -

# EMERGENCY ACTION PLAN (EAP)

University of California Riverside Main Campus Emergency Action Plan (EAP) covers those designated actions employers and employees must take to ensure employee safety from emergencies that arise within the workplace as required by the California Code of Regulations (CCR) Title 8, Section 3220.

*University of  
California Riverside*

# Plan Overview

---

## Introduction

The following elements are included in this plan

- Evacuation procedures and emergency escape routes
- Procedures for employees who remain to operate critical plant operations before they evacuate
- Procedures to account for all employees after an emergency evacuation is completed
- Rescue and medical duties for those employees who are to perform them
- The preferred means of reporting fires and other emergencies
- The names, job titles, and departments of persons who can be contacted for further information or explanation of duties under the plan
- Alerting and Notification
- Contacts
- Emergency Procedures

## Summary

It is the responsibility of the Campus Emergency Manager to create and maintain this campus-level Emergency Action Plan, which is intended to guide the emergency response actions of all campus personnel during an event that threatens life safety or daily operations. Nothing in this plan shall be construed in a manner that limits the use of good judgment and common sense in matters not foreseen or covered by the elements of the plan or any appendices. This plan also sets forth the operational fundamentals that will be used to manage response activities in the event of an emergency on the UC Riverside campus and at off-site facilities.

## Authority

The UC Riverside Emergency Action Plan is created and distributed in accordance with UCR Campus Policy 425-24.

## Purpose

The purpose of this plan is to establish the operational procedures necessary for campus personnel to respond to, and recover from, a significant emergency event in a timely and organized fashion. The University EAP also serves as the baseline by which all organizational and unit level Emergency Action Plans are developed. This plan and organization is subordinate to State and Federal plans during a disaster declaration by those authorities.

## Approvals

The University of California Riverside Emergency Action Plan has been reviewed and approved by:

**Lisa Martin**

*Campus Emergency Manager*

**Russell Vernon, Ph.D.**

*Director of Environmental Health & Safety*

*Implementation Date: **July 20, 2012***

*Date of last Revision: **February 9, 2016***

# Evacuation Procedures & Emergency Escape Routes

---

## Actions to Take

Many incidents (e.g. building fires, chemical releases, and police responses) could require an evacuation of all or part of the campus. All employees must evacuate the building they are in when notified to do so.

## Prior to Exiting

When the building's fire alarm activates, or when notified to evacuate by UCPD, EH&S, Physical Plant, or a department representative:

- Stop all work activities
- If possible to do so without endangering yourself, shut down all operations that could produce hazards if left un-attended, and begin your evacuation immediately.
- Alert others around you that an evacuation is taking place and of their need to exit.
- Close doors behind you as you exit, but do not lock them
- Closed doors help contain fires, locked doors hamper rescue operations.

Unless it creates an unnecessary delay, gather your keys, purse or wallet as you evacuate, keeping in mind you may not be allowed back into the building for an extended time.

# Evacuation Procedures For Critical Plant Operations Employees

---

Safety is a top priority at UCR, and there are no critical operations worth risking one's welfare to perform. If you believe your department has critical operations requiring one or more employees to remain in the building during an evacuation (this should be a rare occurrence), you must contact the Campus Emergency Manager to develop a specific plan of action.

If you are unable to leave a building that is being evacuated to maintain critical processes that will create an increased hazard if left unattended, or you are injured or trapped, attempt to alert someone evacuating the building of your inability to leave.

## Evacuation Routes / Exiting the Building

During a building evacuation, proceed to the nearest exit or stairwell if available. Use an alternate escape route if the stairwell is involved with fire, smoke, or otherwise obstructed. Each employee should be aware of at least two exit routes in their main building in the event one is compromised. **Walk, do not run, and do not use building elevators during an evacuation under any circumstances.**

Assist those who need assistance, especially physically challenged persons, to evacuate or in relocating them to an area of safe refuge. Do not move injured persons unless it is absolutely necessary. Persons involved with developing the local procedures need to address how to evacuate colleagues with special needs that are unable to evacuate on their own. Contact the Campus Emergency Manager for information and guidance on this topic.

## Emergency Assembly Areas (EAAs)

Once outside, move away from the building and towards the building's primary Emergency Assembly Area (EAA). If the primary EAA is unavailable, proceed to the alternate EAA.

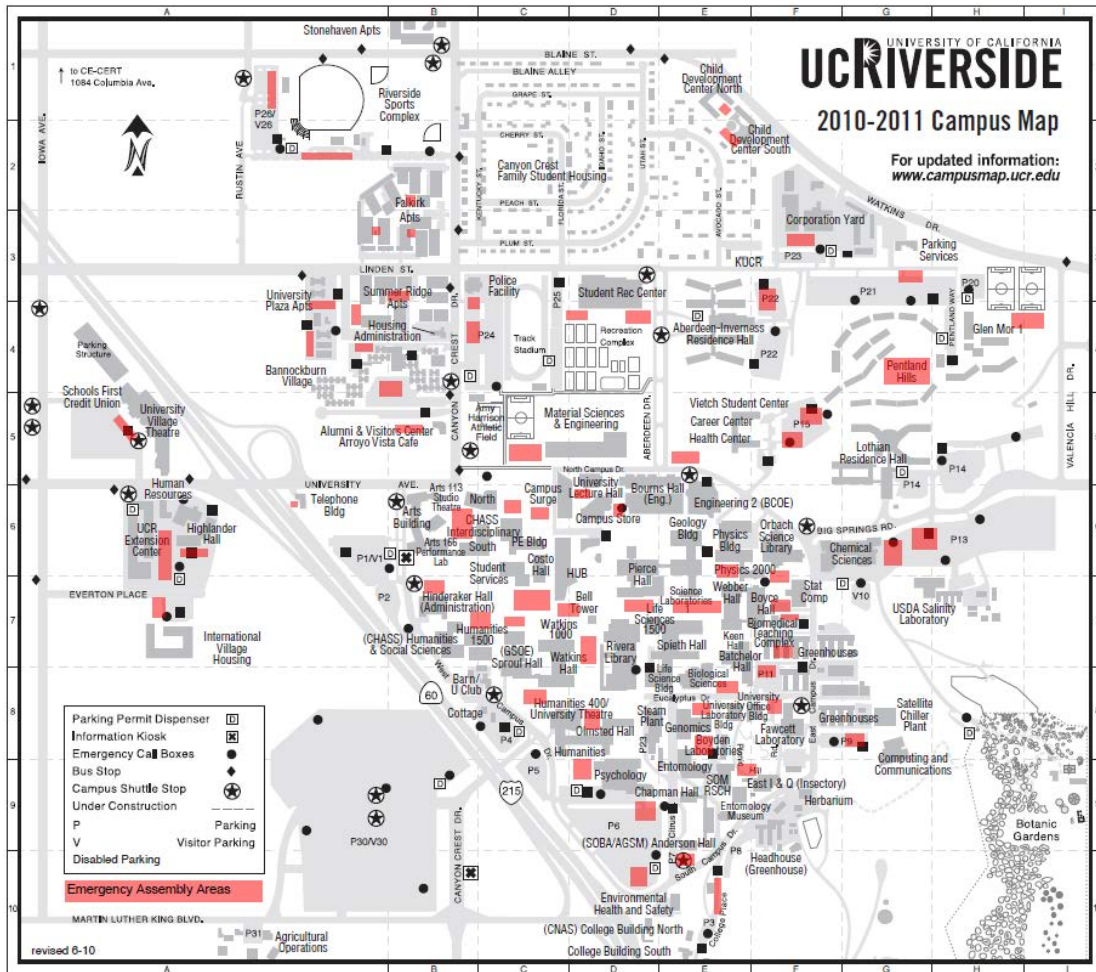

A map of UCR campus EAA's can be found at: <http://ehs.ucr.edu/emergency/aaa.pdf>.

Advise them of your name, department, and room number or location. Make sure they understand to advise the Building Supervisor for Emergency Conditions (BSEC) of the situation.

Take steps to reduce your exposure to additional risks posed by remaining in the building. If you are able to shut down or control critical processes, and subsequently evacuate, do so immediately. If you are injured or trapped remain where you are, unless in life threatening danger, so that rescue can be attempted by emergency responders alerted to your location.

No one can require anyone to remain inside a building that is being evacuated. Classes in session must evacuate as directed above. Your individual choice to remain in the building is only allowed for specific cases as indicated above.

## Campus Map Emergency Assembly Areas (EAAs)

(Click on map for full page view)

# Accounting for Employees after an Evacuation Procedures

Each campus EAA has a designated Building Supervisor for Emergency Conditions (BSEC) to act as the building's emergency point of contact and to manage EAA activities, along with trained Building Emergency Staff (BES) personnel to manage the evacuation process and assist with EAA activities.

Once you are safely at the EAA, be sure to notify the BSEC or BESs of the following:

- The name (if known) and location of persons you know are still in the building. Indicate the reason for their remaining, i.e. injuries, trapped, monitoring critical processes, etc., if known.
- Any information observed on your way out of the building regarding the emergency condition, e.g. visible flames, smoke, odors, spills, structural collapses, sounds, etc.
- Any existing conditions that remain in your work area that might endanger emergency responders or other personnel.

All evacuees are to remain at the EAA until directed otherwise by the BSEC, BES, UCPD, EH&S or other authorized personnel. Information related to the length of interruption or estimates of re-entry will generally be available from the BSEC once it is available from emergency responders regardless of the nature of the incident.

Do not re-enter the building for any reason, even if the alarm silences, until an all-clear is given by the UCPD, EH&S, the BSEC, BES, or other authorized personnel.

## Assigned Responsibilities

### Building Supervisor for Emergency Conditions (BSEC)

The BSECs are specific staff members from major campus buildings who serve as the lead contact for all emergency program activities within their buildings. The BSEC is responsible for coordinating and managing their building's emergency preparedness activities, participating in emergency preparedness training, initiating a roll call and accounting of building occupants in the Emergency Assembly Area (EAA) during emergency evacuations, and providing information to the campus Emergency Operations Center (EOC) in an emergency. Additionally, the BSEC is responsible for identifying and recruiting an alternate building BSEC (ABSEC) and Building Emergency Staff (BES) members in sufficient quantity for their building. The BSEC is also responsible for creating, updating, collecting, and maintaining building specific contact lists (calling trees), building specific accountability rosters, emergency equipment and supplies. Once the evacuation process is complete and building occupants have gathered at the EAA, the BSEC is responsible for taking a roll call. The BSEC should, prior to an emergency, ensure an updated building occupant roster sheet is available and accessible for this process at the time of the evacuation. The BSEC is also responsible for informing the Emergency Operations Center (EOC) by or on-scene Incident Commander of the status of faculty, staff, students, visitors, and guests gathered within the EAA.

#### ***If needed, the BSEC can recruit volunteers to help BESs direct and manage evacuees in the Assembly Area***

BSECs should be prepared to provide the following information:

- Nature of the emergency (e.g. fire)
- Location of the emergency
- Number of persons trapped
- Number of persons injured
- Number of persons unaccounted for

The BSEC should report any injuries in need of immediate care that are reported to them to the on-scene Incident Commander. Any other minor injuries should be documented and reported to the on-scene Incident Commander or the campus EOC by utilizing their assigned 800MHz radio, phone

### Rescue and Medical Duties

UCR relies on the City of Riverside Fire Department and partnering agencies to provide fire suppression, rescue, and medical response duties. It is recommended that departments document any employees that have specialized medical training in the Business Continuity Plan. These identified individuals should not practice outside the scope of their

call, or written notice. The BSEC ensures all important communication and information is exchanged between the on-scene Incident Commander or the EOC, and for sharing information as it becomes available with the evacuated personnel in the EAA.

***The BSEC should not leave the assembly area*** until the emergency is cleared or if directed to do so by UCPD, EH&S, or other authorized personnel. The BSEC may assign a BES, or volunteer(s) from the assembled evacuees, to act as liaisons and assist with the collection and dissemination of information.

### Building Emergency Staff (BES)

The role of the BES is to support the BSEC in his/her emergency preparedness activities before, during and after an incident. Each building on campus should have an adequate number of trained BES personnel to assist in these activities. BES members are responsible for initiating and managing the safe evacuation of their building. Additionally, BESs are responsible for participating in emergency preparedness training, assisting in emergency preparedness exercises, assisting in providing emergency preparedness information to faculty and staff within their building, communicating damage and victim information to the BSEC in an emergency, and assisting the BSEC at the Emergency Assembly Area (EAA). They accomplish this by:

- Directing occupants to the nearest building exit or stairwell
- Assisting personnel in exiting or relocation to an area of safe refuge
- Preventing personnel from using elevators during the evacuation process
- Conducting initial damage assessments during the evacuation process
- Identifying building conditions and hazards important to emergency responders
- Directing evacuated personnel to the building's assigned EAA

Upon arrival at the EAA, the BES is responsible for reporting to the BSEC that the evacuation of their designated area is complete, and reporting all physically challenged, trapped, or injured personnel remaining in the building. The BES is to assist the BSEC with completion of the Building Accountability Roster and any with any other assigned duties. The BES should also complete a Building Damage Assessment & Utility Status form.

training and are not required or expected to assist in any emergency or medical situation, but may come forth to offer or render aid and assistance as covered under "Good Samaritan" regulations.

# Fire and Emergency Reporting Procedures

---

In the event of an emergency, contact University of California Police Department (UCPD) Dispatch by dialing **911** (from a landline phone) or (951) 827-5222 (from a cell phone).

## When to call:

- Report a medical emergency
- Report all fire incidents, even if the fire is extinguished
- Report criminal or suspicious behavior
- Report any possible situation that you believe may be serious, and that may result in injury, death, loss of property, apprehension of a suspected criminal or prevention of a crime that is about to occur. Call even if you are in doubt about the seriousness of the situation.

## What information to provide:

- Your Name
- The nature of the emergency
- The location of the emergency
- When the emergency happened
- How the emergency happened
- Whether or not you are in a safe location

Stay on the phone with the dispatcher until notified by the dispatcher to hang up, or emergency responders arrive on scene.

# Alerting and Notification

---

## Emergency Communications

If an emergency requires an evacuation of the building or for employees to take action, there are systems in place to provide notification. UCR's emergency alert and notification of employees is multi-layered for the purpose of redundancy. A variety of methods is available, though not all systems are available within each building on the UCR campus, nor are all systems deployed for every incident.

These notification systems include:

- Building fire alarms
- Text messaging from Emergency Notification System
- Verbal notification from UCPD, EH&S, Physical Plant, or a department representative
- Email (e.g., Scotmail)
- Website (<http://campusstatus.ucr.edu>, <http://rspace.ucr.edu>, <http://rweb.ucr.edu>)
- Voicemail systems
- Campus Warning Siren
- 800 MHz Radio

Other examples of notification methods include: Loud verbal commands, handheld & vehicle PA systems, phone trees, bullhorns, even just flashing the lights can be a way to get people's attention so they know there is an emergency/evacuation taking place.

## Additional Information / Follow-up activities

Information concerning emergencies effecting UCR and the Riverside County region will be available to the campus community through the following resources:

- Campus Status website <http://campusstatus.ucr.edu>
- EH&S Emergency Management website <http://ehs.ucr.edu/emergency>
- Campus Radio KUCR: 88.3 FM or <http://kucr.org>
- Riverside Area News and Radio Stations  
[KFRG 95.1 FM](#) or [KGGI 99.1 FM](#)  
[KFI 640 AM](#) or [KNX 1070 AM](#)
- Emergency Alert System (EAS) Broadcasts

# Contacts

## Campus Responsibilities

The following are names, job titles, and departments of persons who can be contacted for further information or explanation of duties under the plan.

Department	Names / Job Title(s)	
<b>Environmental Health &amp; Safety</b> <a href="http://ehs.ucr.edu">http://ehs.ucr.edu</a> Phone: (951) 827-5528 Fax: (951) 827-5122 Email: <a href="mailto:ehs@ucr.edu">ehs@ucr.edu</a>	<b>Paul Walker</b> <i>Campus Emergency Manager</i> <a href="mailto:paul.walker@ucr.edu">paul.walker@ucr.edu</a> (951) 827-2609	<b>Beiwei Tu, CIH, CSP</b> <i>Safety / IH Manager</i> <a href="mailto:beiwei.tu@ucr.edu">beiwei.tu@ucr.edu</a> (951) 827-2964
	<b>Scott Corrin</b> <i>Campus Fire Marshal</i> <a href="mailto:scott.corrin@ucr.edu">scott.corrin@ucr.edu</a> (951) 827-6309	<b>Russell Vernon, Ph.D.</b> <i>Director</i> <a href="mailto:russell.vernon@ucr.edu">russell.vernon@ucr.edu</a> (951) 827-5119
<b>University of California Police Department (UCPD)</b> <a href="http://police.ucr.edu">http://police.ucr.edu</a> Phone: (951) 827-5222 Fax: (951) 827-1639 Email: <a href="mailto:ucpdgeneralmail@ucr.edu">ucpdgeneralmail@ucr.edu</a>	<b>Mike Lane</b> <i>Chief of Police</i> <a href="mailto:mike.lane@ucr.edu">mike.lane@ucr.edu</a>	<b>Jason Day</b> <i>Lieutenant of Police</i> <a href="mailto:jason.day@ucr.edu">jason.day@ucr.edu</a>
	<b>John Freese</b> <i>Asst. Chief of Police</i> <a href="mailto:john.freese@ucr.edu">john.freese@ucr.edu</a>	

## Department Head / Chair Director Responsibilities

The Department is responsible for implementing essential elements of the EAP; planning, employee awareness training, the assignment of department personnel responsibilities (BSEC & BES positions), and annual Department EAP evaluation and maintenance.

The following duties must be performed to maintain an effective EAP:

- Develop, review, and update the Department EAP annually or as needed.
- Train all employees on the location of all emergency exits, fire extinguishers, manual pull stations, first aid kits, and Automated External Defibrillators (where applicable) within their assigned building/workspace.
- Ensure each person assigned space by the department creates and updates the Emergency Contact information for each room placard at <http://econtact.ucr.edu>.

# Emergency Procedures

Emergency Procedures are available online at <http://ehs.ucr.edu> and <http://campusstatus.ucr.edu> for the following:

- Blood and Body Fluid exposure
- Bomb Threat
- Civil Disturbance or Demonstration
- Earthquakes
- Fire and Smoke Conditions
- Hazardous Material Exposure / Spill
- Homeland Security Incident
- Medical Emergencies and First Aid
- Radioactive Contamination / Spill
- Suspicious Mail or Packages
- Utility Failure
- Violence or Crime on Campus

# FIGURE 1. SITE LOCUS

### III. SITE HISTORY AND USE

1. Title History Researched: Yes \_\_\_\_\_ No  x
2. Zoning Classification:  Subject property is identified as "Educational Institutions"  
 use in Riverside's 2025 General Plan
3. Institutional Controls/Restrictions:  None known or reported
4. Current Uses of Site  
 \_\_\_\_\_ Industrial  
 Warehouse \_\_\_\_\_ Commercial  
 \_\_\_\_\_ Agricultural  
 Housing complex \_\_\_\_\_ Residential
5. Brief Description of Current Uses (Describe in terms of product line/crop, processes, chemicals and materials used, wastes generated, waste management and disposal, etc.):

The site is a partially occupied residential student housing complex. There are about nine internal paved streets throughout the complex with a children's playground south of Cherry St. A warehouse/shop and storage area with shipping containers is located at 3381 Kentucky St near the NW corner of the site. A grounds maintenance shop is also located at 3384 Avocado on the eastern side of the site. A community center building is located at 892 Plum St. in the SW corner of the site. The KUCR radio station and tower are located in the SE corner of the site off Linden St.

6. Brief Description of Former Uses of Site (Give dates and available information as requested above based on reasonably ascertainable information as far back in time as to when property was first developed or intensively used):

Citrus groves were the predominant land use in the vicinity of the subject property in the first half of the twentieth century. Historical topographic maps show orchards on the eastern portion of the site. It is likely that the entire site was developed with citrus groves prior to 1940, although the western half of the site may have been undeveloped. In 1940, the existing bungalow styles residences were built for military family housing. This use continued until 1955 when the University of California acquired the land and began using it for family student housing. This use continues until the present day, although residences are being vacating because the buildings and infrastructure have reached the end of their useful life.

Appendix I contains copies of historic topographic maps.

7. Current and Prior Uses of Adjacent Properties (based on reasonably ascertainable info):

*North:* 1901 – railroad; stream; scattered structures and roadways.

1942 – similar to 1901; addition of orchards (N) and residences (NW).

1953 – similar to 1942; addition of oil tanks.

1967 – urbanization including residential and commercial land uses.

2015 – similar to 1967 with additional urban infill.

2016 – commercial retail/services; apartment complexes.

*South:* 1901 – undeveloped with the exception of a roadway to the SW.

1942 – similar to 1901; addition of orchards, scattered structures, and the UC Citrus Experiment Station.

1953 – similar to 1942; some orchards removed.

1967 – UCR recreational and residential uses.

2015 – similar to 1967 with additional infill.

2016 – UCR campus recreational/residential areas.

*East:* 1901 – railroad; scattered structures and roadways.

1942 – similar to 1901; addition of orchards east of the railroad.

1953 – similar to 1942; addition of orchards between the site and the railroad.

1967 – urbanization including predominantly residential land uses; UCR-related uses immediately east of the site.

2015 – similar to 1967 with additional infill.

2016 – UCR day care center; fleet services complex; railroad tracks.

*West:* 1901 – undeveloped except for scattered buildings along the roadway to the NW; canal.

1942 – similar to 1901.

1953 – similar to 1942; addition of orchards between the site and the canal.

1967 – largely undeveloped; some scattered structures (SW).

2015 – recreational and residential uses.

2016 – recreational fields; apartment complexes.

Appendix I contains copies of historic topographic maps.

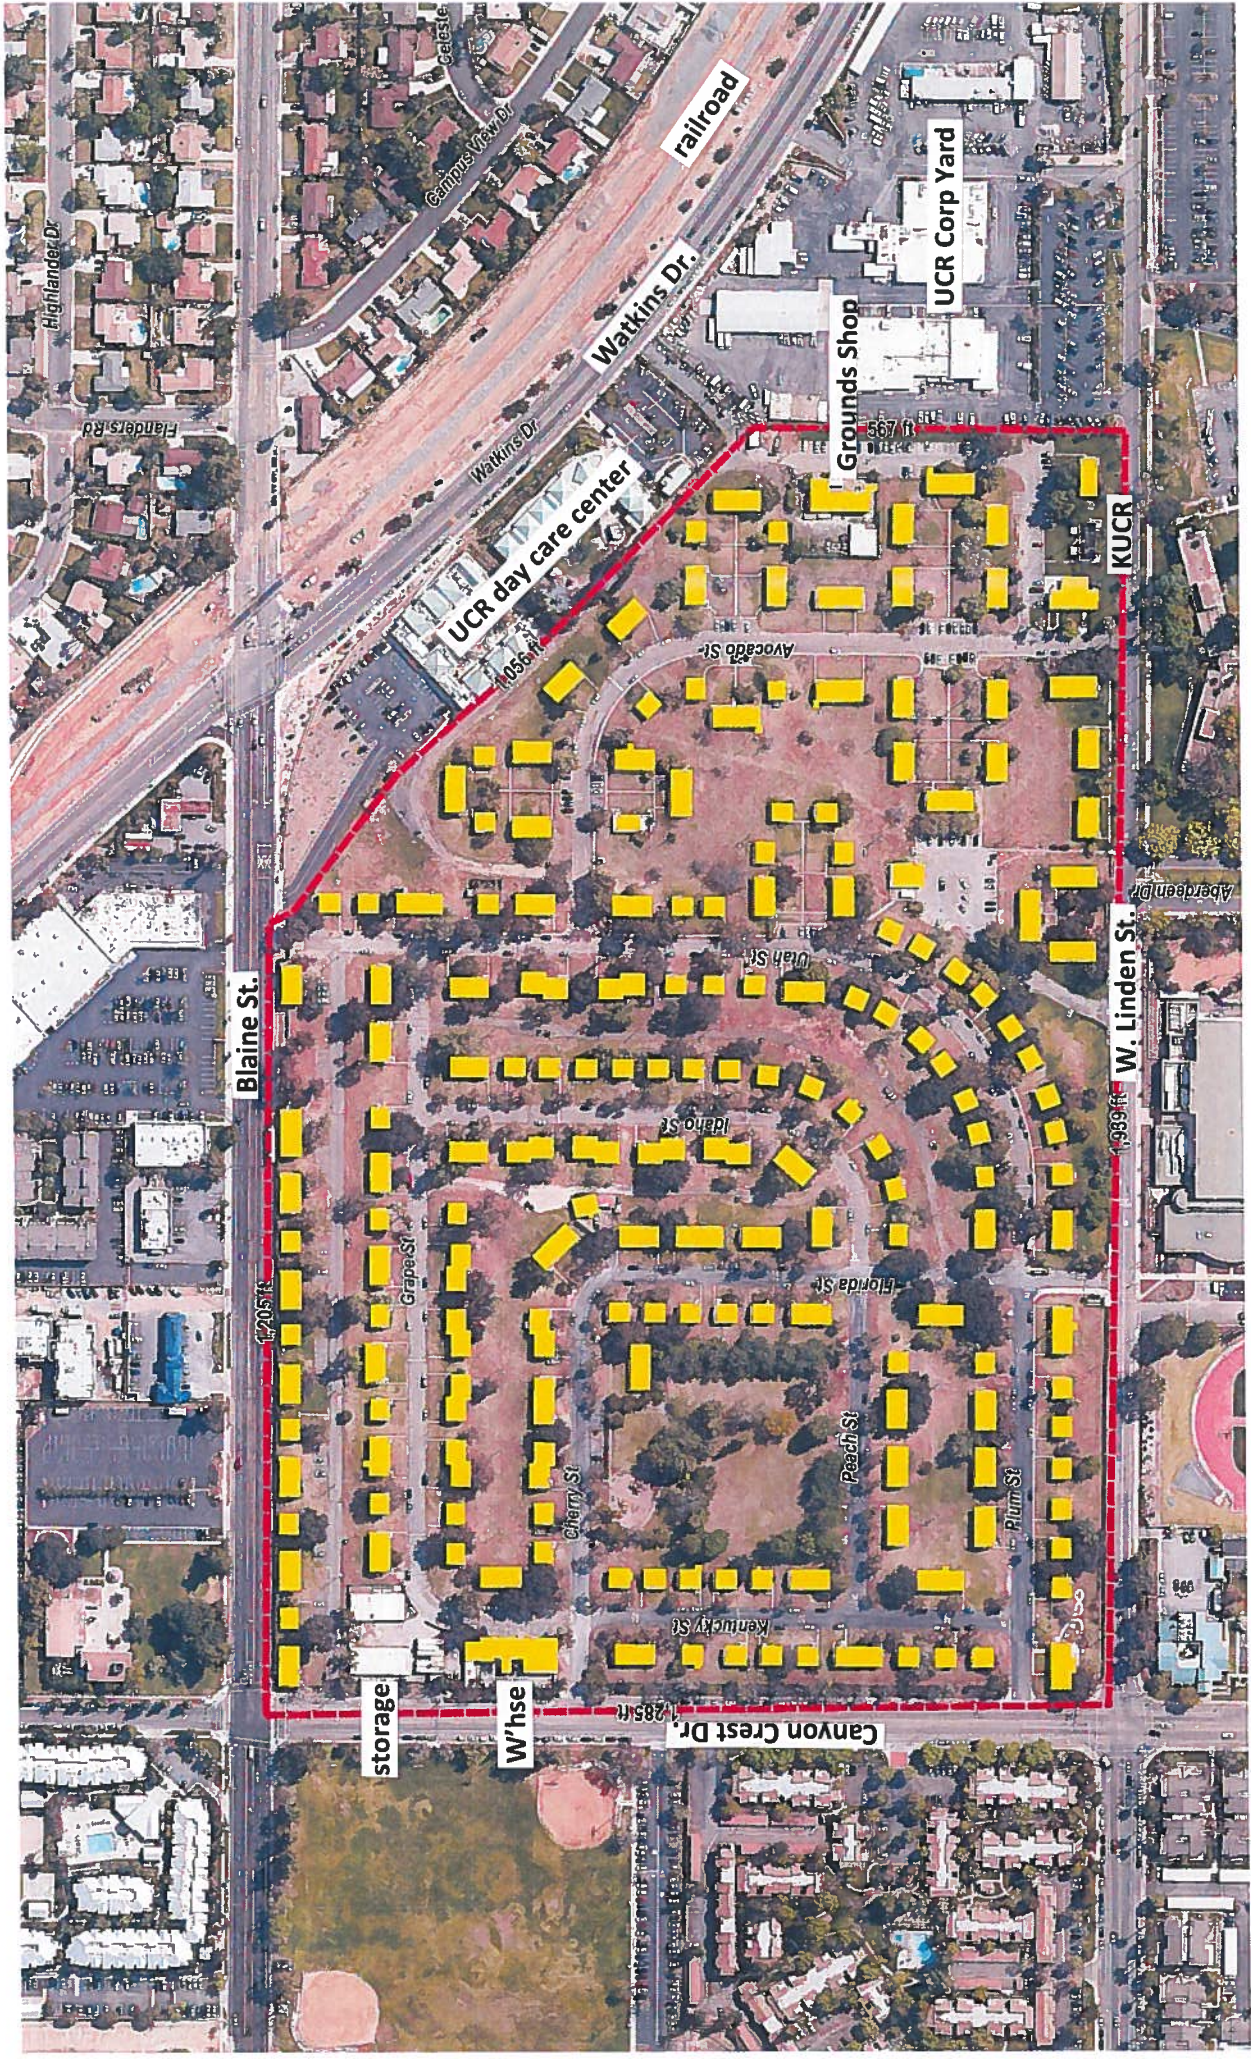

8. List of Regulatory Agency Permits/Violations/Liens for the Site (storage tanks; wastewater discharge; hazardous/flammable/radioactive material storage/use/disposal agricultural chemical application/mixing/disposal and other applicable permits):

None known or reported. UC Riverside conducts regular fire/hazmat inspections of the site including the warehouse/shop at 3381 Kentucky St.

9. References used in preparing this report and persons interviewed relative to site history and use (must include current owner and/or current operator(s) or major occupant(s) and past owners/operators if necessary):

**FIGURE 2. SITE PLAN**

#### **IV. SITE ENVIRONMENTAL CHARACTERISTICS**

##### **1. Site Layout Information (see Figure 2 - Site Plan)**

###### *A. approximate property boundaries:*

North – Blaine St.

South – W. Linden St.

East – UCR Day Care facility/Fleet Services - Facilities Corporation Yard

West – Canyon Crest Dr.

###### *B. building and parking area locations:*

Approximately 185 buildings on site, nearly all of which are small one-story bungalow-style residences. Some storage areas also exist on site. Parking areas are scattered throughout the site on or adjacent to the internal streets.

###### *C. site utilities (types and locations):*

Electric and gas service. Water and sewer service.

###### *D. easements:*

Normal and customary right-of-way and utility easements.

###### *E. fencing:*

Cyclone fencing along Blaine St., Canyon Crest Dr., and eastern boundary with UCR day care facility and facilities/fleet services corporation yard. Partial fencing along W end of Linden St. (mainly hedge to east).

###### *F. high voltage power lines:*

Service distribution lines generally run through back yards and also down the middle of Blaine Alley along the northern side of the complex.

###### *G. ponds and floodplains:*

None on site. The property is not located in a flood hazard zone.

###### *H. streams:*

None on site.

###### *I. marshes or wetlands including any evidence of fill material:*

None on site.

J. wells:

None on site.

**2. Site Specific Waste/Wastewater Information** (Site Plan to show known or suspected conveyance, storage, or disposal areas):

A. catch basins:

None observed. Storm drainage appears to be overland street drainage.

B. septic tanks/cesspools/leaching fields:

None known or reported on site.

C. sanitary sewers:

The complex is served by campus sewer system tied to city system.

D. underground storage tanks and supply lines:

None known to exist.

E. above ground storage tanks:

None known or observed.

F. pits/ponds/lagoons:

None.

G. drainage lines:

None.

H. sumps:

None.

I. ditches:

None.

J. wells (capped or uncapped) and dry wells:

None.

*K. fill connections/vent pipes (suspected or identified):*

None observed on site.

*L. unidentified cover plates/pipes; mounds of soil/fill; or depressions/subsidence:*

None observed on site.

*M. other miscellaneous:*

KUCR radio tower in SE corner of site just N of Linden St.

### **3. Site Specific Characteristics (see Figure 2 - Site Plan)**

*A. topography and surface water drainage patterns:*

The topography of the site ranges from approximately 1100' - 1040', sloping down slightly to the west. Natural overland drainage is towards the west.

*B. hydrogeological conditions (soil type; depth to groundwater; probable gradient)*

Soils on site reportedly consist of the following types (per NRCS Soil Survey):

- Arlington fine sandy loam, 2-8% slopes (~19 acres or 47% of site area)
- Buren fine sandy loam, 2-8% slopes, eroded (~32 acres or 62%)
- Monserate sandy loam, shallow, 5-15% slopes, eroded (<1 acre or 1%)

Depth to groundwater is estimated as 100' bgs. Inferred gradient follows the topography of the area with gradient towards N/NW.

*C. surface soil or pavement staining/discoloration or disruption/texture change:*

None noted. No significant paint chips observed building perimeters.

*D. vegetation condition and signs of stress:*

The site contains mature landscaping including a central community park area located south of Cherry St. Mainly unirrigated dry grass lawns.

*E. drums or other chemical storage areas:*

Small quantities of equipment fuels and common household hazmats (paints, cleaners, etc) are stored in the warehouse area at 3381 Kentucky St. No signs of spillage or leakage were observed in the building or in metal flammables storage lockers. No reports of any significant spills or leaks. No bulk storage noted (no containers larger than 5-gallons observed).

*F. maintenance or shop/service areas:*

Warehouse/shop area located at 3381 Kentucky St. (NW corner of site).  
Grounds maintenance garage located at 3458 Avocado St. (E side of site).

*G. odors:*

None unusual noted.

*H. dead-end roads/paths or unexplained vehicle tracks (signs of illegal dumping):*

No signs of any illegal dumping on site.

#### **4. Building Inspection**

*A. number of buildings and their age, construction, and general condition:*

(185) one-story wood frame buildings were built in 1940 (76 years old).  
Approx (83) single units; (60) 2-BR duplexes; and (32) 3-BR duplexes.  
Most housing units have newer gable composition shingle roofs (replaced flat roofs); concrete foundations with crawl spaces; stucco exteriors; and plastered drywall interiors with vinyl flooring.

*B. previous disclosure of hazardous materials in building(s):* Yes  No

Asbestos-containing materials and lead-based paint.

*C. visible signs of corrosion or other evidence of solvent action:*

None noted in warehouse/shop or grounds maintenance garage.

*D. visible signs of any spillage or residues:*

None noted in warehouse/shop or grounds maintenance garage.

*E. solid waste or trash:*

None significant noted. Curbside trash pickup. Several dumpsters.

*F. visible signs of polychlorinated biphenyls [PCBs] (i.e. - check for transformers, capacitors, electrical switchgear, hydraulics, etc. and any signs of leakage):*

Several pole-mounted transformers observed. No spills/leakage noted.

G. *visible signs of asbestos* (check for thermal/electrical/acoustical insulation, sprayed-on fireproofing and plaster, asphalt roofing material, various tiles, transite panels, pipes/lagging, duct wrapping, hoods, drains, etc.):

Asbestos-containing building materials (ACBM) have been identified in vinyl floor tile and mastic; roofing materials including mastic and roof felt; and transite panels located on some building porches.

## 5. Neighborhood observations (0.5 mile radius drive-by survey)

### A. *land use*:

Commercial land uses to the north include a strip mall, car wash, tire shop, church, as well as apartments. Uses to the east consist of a UCR child care center, fleet services and corporation yard, and an Environmental Health and Safety facility, and railroad tracks. To the south are UCR-affiliated residential and recreational uses. Land uses to the west are residential and recreational.

### B. *hazardous waste generation or treatment/storage/disposal (TSD) facilities*:

RCRA waste generators: None in the immediate vicinity of the subject property.

### C. *summary of known or suspected hazmat release sites* (1-mile radius records search):

#### Cal-EPA SWRCB LUST (within 0.5 mile):

- T0606500022, E-Z Serve #070135, 811 Blaine St – Gasoline in soil Completed – Case Closed as of 1/14/92
- T0606500519, UC Riverside Fleet Services, 3401 Watkins Dr - Gasoline in soil; Completed – Case Closed as of 10/6/2000
- T0606500425, UC Riverside Steam Plant, 3401 Watkins Dr - Heating Oil/Fuel Oil in soil; Completed – Case Closed as of 7/29/98

SWRCB Cleanup Programs: No sites listed within 1-mile radius.

#### Cal-EPA DTSC (all programs):

- UC Riverside (#80001663), 900 University Avenue. Container storage unit and waste pile cleanup referred to SMBRP as of 6/3/1998.
- Meth lab cleanup site from 2/7/2004 is identified at 776 Blaine St, Riverside (#200402016)

Federal-EPA SEMS (formerly CERCLIS): No sites listed within 1-mile radius.

Refer to Appendix II for a summary of regulatory agency records reviewed.

*D. existing monitoring wells:*

None in immediate vicinity.

*E. landfills/junkyards:*

None in immediate vicinity.

*F. gas or service stations/automotive repair shops:*

None currently located in immediate vicinity.

USGS historical topo map from 1953 shows oil tanks immediately NE of the subject property at the site of the existing Hector's Tires tire shop at 681 W Blaine St, Riverside. No record exists of tank removals or any petroleum releases at that site.

The existing car wash at 811 Blaine St was formerly an EZ Serve gasoline station with a reported LUST with release to soil that was closed in 1992.

*G. drinking water supplies (surface or underground within 0.5 mile of site):*

Drinking water on site is supplied by the City of Riverside Public Utilities from water sources greater than 0.5 mile from the site. The Gage Canal is within 0.5 mile of the site; while the canal water is potable, it is used for irrigation of agricultural fields not drinking water.

## **V. FINDINGS AND CONCLUSIONS & RECOMMENDATIONS**

### **1. Findings:**

The following Recognized Environmental Condition (RECs) were identified:

- Asbestos-containing building materials (ACBM) have been identified in vinyl floor tile and mastic in multiple buildings; roofing materials including mastic and roof felt; and transite panels located on some porches; all of these ACBMs are considered non-friable and pose no problems unless disturbed.
- Lead-based paint is reportedly present in building exterior wood and metal surfaces as well as interior walls, ceilings, and woodwork. No significant deteriorated/peeling interior or exterior painted surfaces were observed based on a very limited number of structures inspected. Likewise, no significant paint chips were observed around building foundation driplines, based on a very limited number of structures inspected.

## **2. Conclusions & Recommendations:**

I have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the property. Any exceptions to, or deletions from, this practice are described below.

This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the property except for the following:

- Asbestos-containing building materials (ACBM) have been identified in some flooring, roofing, and exterior porch materials. All of these ACBMs are considered non-friable and pose no problems unless disturbed. ACBMs must be surveyed prior to demolition activity. Category I non-friable ACBMs (including those identified on site – vinyl flooring, roofing, and transite panels) generally do not have to be removed prior to demolition per Federal NESHAP regulations (40 CFR Part 61 Subpart M) and corresponding state regulations, and may be disposed of as non-hazardous construction and demolition debris. Consult with campus asbestos management personnel regarding available building ACBM survey information; regulatory agency notification and building inspection requirements; and disposal options.

The property was undeveloped agricultural land prior to construction of the housing complex in 1940 for military personnel. The complex has been used for student housing since UCR acquired the site. Historical and current residential uses of the site pose little risk to the subject property. There were no regulatory agency or campus records of any hazmat releases on the subject property. Leaking tank sites located in the immediate vicinity have all received regulatory agency case closure, so pose no significant risk to the subject property. Surrounding properties are commercial, apartments, or UCR-related uses that pose little risk to the subject property.

It appeared that lead-based painted exterior and interior surfaces were generally well adhered to underlying stucco or drywall surfaces with no peeling, based on a limited number of buildings inspected. Adhered (non-peeling) LBP materials particularly those encapsulated underneath newer coats of paint may potentially be disposed as non-hazardous construction and demolition (C&D) solid waste in permitted Class II or III landfills following mechanical demolition processes. Demolition should be conducted by approved contractors in accordance with Cal/OSHA Construction Stds (Title 8 CCR Section 1532.1).

## **3. Limitations:**

The contents of this Phase I report are based on review of University and publicly available records, and limited site reconnaissance. The University makes no warranty that the records reviewed were accurate or complete, or that all records pertaining to the subject property were reviewed. Maps of the property included in this report are

for general information purposes only. Any conclusions and recommendations expressed in this report are not to be relied upon.

There may be hidden subsurface conditions, or other environmental or physical conditions not readily obvious through visual inspection that may impact the subject property. Due to the large size of the site and number of structures, only a very small number of vacant units were actually inspected that may or may not be representative of conditions across the entire site. The University assumes no liability for misrepresentation of information contained in this report or otherwise for conditions at the property.

This report is not intended to replace buyer's own due diligence or other appropriate inquiry into the property. No warranties or representations, expressed or implied, are made for any of the contents, findings, or statements made in this report. The University takes no responsibility for any errors or omissions that may be contained in this report.

**4. Identification of environmental professional:**

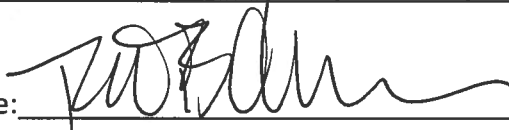

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312.10 and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Robert Charbonneau                      Director, Environmental Services

Alicia Jensen                              Risk Analyst, Environmental Services

University of California Office of the President – Risk Services

1111 Franklin St., 10<sup>th</sup> floor, Oakland, CA 94607-5200      (510) 987-9594

### **Work Experience**

#### **Environmental Services Director (1989-Present)**

*University of California - Office of the President (Systemwide Headquarters)  
Risk Services Office - Environmental Services*

- Over thirty (30) years experience in environmental science technical fields
- Manage UC systemwide environmental due diligence program and policies, procedures, and protocols for all University real estate transactions including acquisitions, sales, gifts and bequests, and leases of real property
- Conduct/oversee environmental site assessments on *six hundred (600)* properties, including a wide range of commercial, industrial, agricultural, medical, institutional, multi-residential, and undeveloped/wildlands properties across the Western United States (primarily in California)
- Served on original ASTM E-50 Committee that developed the first Standard Practice for Environmental Site Assessments (E-1527)
- Long-time certification as Registered Environmental Assessor (R.E.A. #01876) by Cal-EPA (state certification program disbanded in 2012)
- Provide expert advice to UC systemwide real estate personnel and General Counsel on technical and risk assessment and management aspects of due diligence investigations
- Manage and direct/coordinate environmental consultants and contractors working on UC site characterization/remediation activities and contracts
- Managed UC systemwide underground storage tank compliance program

#### **Associate EH&S Technologist / Consultant (1987-1989)**

*UC Berkeley Office of Environmental Health & Safety  
UC Berkeley Department of Facilities Management*

Perform Phase I site assessments of campus-related properties. Respond to hazardous materials spills and incidents. Conduct comprehensive environmental assessment of Strawberry Creek and its upper watershed. Design, implement, and manage both watershed and stream restoration strategies. Assist in engineering evaluation studies of campus water and sanitary/storm sewer systems.

**Environmental Scientist - Hydrologist / Biologist (1984-1986)**

*IEP Incorporated, Northborough MA*

Perform groundwater and surface water quality monitoring and assessment. Assist in groundwater protection and Federal Superfund contamination studies. Conduct Phase I due diligence site assessments. Perform surface water hydrology studies. Work as part of an interdisciplinary team on publicly and privately funded lakes and watershed diagnostic/feasibility studies.

**Senior Sanitary Engineer's Aide (1981)**

*Massachusetts Department of Environmental Quality Engineering (DEQE)  
Division of Water Pollution Control (DWPC) - Technical Services Branch*

As part of River Basin Planning Section, conduct water quality surveys and effluent compliance monitoring of selected industries and POTWs in eight major watersheds. Sample New Bedford Harbor to determine extent of sediment PCB contamination.

**Fire Marshal (1981-1983)**

*University of Massachusetts - Amherst  
Office of Environmental Health and Safety*

Conduct facility inspections to enforce fire regulations. Perform investigations of fire-related incidents on campus property. Serve as on-duty emergency responder.

**Firefighter/Lieutenant – Emergency Medical Technician/Ambulance (NREMT)**

*Northborough MA Fire Department (1978-1986, Acting Lieutenant - Engine Co. 6)  
Amherst MA Fire Department (1981-1983, Lieutenant – Engine Co. 3)*

Respond to fires, hazardous materials incidents, medical emergencies, hazardous conditions, and other emergencies. Perform fire suppression and rescue. Conduct fire safety inspections and fire investigations. Assess and mitigate wide range of hazardous conditions/situations. Oversee engine company crew and operations.

**Higher Education Degrees**

University of California at Berkeley:

Masters Degree (M.C.P. - Environmental Planning - 1988)

University of Massachusetts at Amherst:

Bachelor of Science Cum Laude (Environmental Sciences with Forestry Minor - 1983)

**ALICIA JENSEN**  
University of California  
Office of the President – Risk Services  
1111 Franklin Street  
Oakland, CA 94607  
(510) 987-9290

**Work Experience**

**Risk Analyst (2013-Present)**

*University of California - Office of the President (Systemwide Headquarters)  
Risk Services Office - Environmental Services*

Fifteen (15) years experience in environmental science and planning technical fields. Key duties include supporting the University's environmental due diligence program for real estate transactions by determining site environmental characteristics, conducting agency records reviews, researching site history, and assisting with site inspections, interviews, and report preparation.

**Associate Physical and Environmental Planner (2005-2013)**

*University of California - Office of the President (Systemwide Headquarters)  
Capital Resources Management - Environmental Planning*

Key responsibilities were advancing the land use and environmental planning directives of the University by facilitating implementation of long range visionary/land use plans, environmental laws, and related organizational policies in support of real estate transactions and large capital projects through advocacy, strategic planning, and teamwork with staff across multiple campus locations.

**Project Planner (2001-2004)**

*David Evans and Associates Inc., San Diego CA*

Achieved client goals for land use planning and compliance with the California Environmental Quality Act (CEQA) and other state and federal environmental laws.

**Higher Education Degrees**

California State University, San Diego:  
Master of Arts (Geography - 2005)

University of California at Davis:  
Bachelor of Science (Environmental Policy Analysis and Planning - 2000)

Subject: Preliminary Limited Environmental Site Investigation  
North District Predevelopment Studies  
North of West Linden Street and East of Canyon Crest Drive  
Riverside, California

Ladies and Gentlemen:

Enclosed is our preliminary limited environmental site investigation report for the proposed North District development located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California. The site is bounded by West Blaine Street to the north, Canyon Crest Drive to the west, West Linden Street to the south, and University of California Riverside (UCR) campus facilities to the east. The main UCR campus is located to the south of the site, across West Linden Street.

We appreciate the opportunity to provide our services to you on this project. If you have any questions, please call.

Sincerely yours,  
HALEY & ALDRICH, INC.

# 1. Introduction

This report presents the results of our preliminary limited environmental site investigation for the proposed North District development (Site) located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California. The site is bounded by West Blaine Street to the north, Canyon Crest Drive to the west, West Linden Street to the south, and University of California Riverside (UCR) campus facilities to the east, as shown on Figures 1 and 2. The main UCR campus is located to the south of the site, across West Linden Street.

## 1.1 BACKGROUND AND EXISTING SITE CONDITIONS

Currently, the approximately 55-acre site is occupied by Canyon Crest Student Housing, a complex of single-story student housing units located north of the main UCR campus. Storage and maintenance facilities, including permanent structures and modular units, are present in the northwest and southeast portions of the site. Typical residential above and underground utilities are present throughout the development. A large park and playground is located in the western portion of the site, south of Cherry Street. There are nine asphalt-paved residential streets and several gravel roads. Based on our review of readily available historical information and aerial photographs, much of the existing development was constructed as military housing in 1940, before which time the Site was occupied by citrus groves.

## 1.2 PROJECT DESCRIPTION

The proposed project is still in the conceptual planning stage and details are still being developed. We understand that the proposed project is expected to include redevelopment of the existing housing complex with new multi-story housing units.

## 1.3 PURPOSE

Based on our review of the Phase I Environmental Site Assessment prepared for the Site, the following environmental concerns are identified at the Site:

- Previous potential use of lead-based paint at the site due to the age of the residences;
- Previous potential use of termiticides at the site due to the age of the residences; and
- Previous potential use of arsenic at the site due to previous agricultural activities dating back prior to the 1950s.

Soil sampling was conducted to evaluate whether these historical activities may have impacted soil. Soil sample analytical results were used to evaluate potential risk to human health.

## 2. Scope of Work

The scope of work was developed based on the following California Department of Toxic Substances Control (DTSC) guidance documents, collectively referred to as the DTSC Guidance:

- “Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers” dated 9 June 2006; and
- “Interim Guidance for Sampling Agricultural Properties (Third Revision)” dated 30 April 2008.

The DTSC Guidance recommends that a minimum of four soil samples be collected from around each residential structure. We recommended modifying this approach and collected soil samples from around 30 structures as a preliminary limited investigation, as described below.

The preliminary limited environmental site investigation consisted of collecting soil samples at depths 0.5 feet below ground surface (bgs) and 2.5 feet bgs using a hand auger at 30 residences at the Site, submitting soil samples for environmental analysis, evaluating soil sample analytical data, and preparing a preliminary limited site investigation report that summarizes our findings and preliminary recommendations.

DRAFT

### 3. Field Investigation

Soil sampling activities were conducted at the Site on March 27 through March 30, 2017. A total of 120 soil boring locations were hand augured at the Site by Interphase Environmental under the oversight of Haley & Aldrich. The locations of the soil borings are shown on Figure 2. 30 residences were selected for soil sampling activities; residences with both observed paint peeling and less visually observed paint peeling were selected. Four soil borings were advanced using a hand auger at each of the 30 selected residences (for a total of 120 soil boring locations). Soil borings were advanced within two feet of the residential structure. Locations were biased towards areas with visually peeling paint and areas of structural drainage. Soil samples were collected using the hand auger or slide hammer at 0-0.5 feet bgs and 2-2.5 feet bgs from each soil boring in laboratory-provided glass sample containers or acetate sleeves (for a total of 240 soil samples plus 14 duplicate samples). The soil samples were stored in a chilled ice chest and transported to a Eurofins Calscience, a California-certified environmental laboratory, under chain of custody protocol.

The soil samples were analyzed for the following based on the DTSC guidance:

- Each of the 0-0.5 foot samples, including 12 duplicate samples (total of 132 soil samples), were initially analyzed for lead by United States Environmental Protection Agency (USEPA) Method 6010. Based on the results of the 0-0.5 foot samples, 48 of the 2-2.5 foot samples were analyzed for lead (see Section 4.1).
- Twenty (20) of the 0-0.5 foot samples, including two duplicate samples (total of 22 soil samples), were analyzed for arsenic by USEPA Method 6010.
- Up to four discrete samples collected at similar depths from each residential property were composited into one composite soil sample (the discrete soil samples were composited into a total of 61 composite soil samples). The 61 composite soil samples (31 composite samples from 0-0.5 feet bgs and 30 composite samples from 2-2.5 feet bgs) and including six duplicate samples (total of 67 composite soil samples) were analyzed for organochlorine pesticides (OCP) following USEPA Method 8081. Based on the results of these samples, 152 discrete soil samples were also analyzed for OPCs (see Section 4.3).

The hand auger and slide hammer were decontaminated between sample collection by washing with a tri-sodium phosphate-based detergent and tap water, followed by successive rinses with tap water, and a final rinse in deionized water. Decontamination water was transferred into a 55-gallon Department of Transportation (DOT)-approved drum and stored on-Site pending offsite disposal. Soil borings were backfilled with the soil cuttings.

## 4. Soil Sample Results

Soil analytical results are summarized in Tables 1 and 2. Laboratory reports are included in Appendix A.

Soil results are summarized below.

### 4.1 LEAD RESULTS

Table 1 is a summary of lead results for the discrete soil samples. Detected lead concentrations ranged between 3.07 and 434 milligrams per kilogram (mg/kg). Lead was detected at a concentration greater than the DTSC modified screening level for residential soil of 80 mg/kg in 48 of the surface (0-0.5 feet bgs) soil samples. Therefore, the subsurface (2-2.5 feet bgs) for these 48 soil samples were analyzed for lead. The subsurface soil samples analyzed did not exhibit lead concentrations greater than 80 mg/kg. Therefore, it appears that lead concentrations greater than 80 mg/kg are limited to the upper two feet of soil based on the sampling and analysis performed.

Figure 3 shows the shallow (0-0.5 feet bgs) soil sample locations that exceed the lead screening level of 80 mg/kg.

### 4.2 ARSENIC RESULTS

Table 1 is a summary of arsenic results for the discrete soil samples. Detected arsenic concentrations ranged between 1.85 and 7.65 mg/kg. These concentrations are less than the DTSC Schools Program screening level of 12 mg/kg (DTSC, 2008). Based on these results, additional arsenic analysis was not performed.

### 4.3 ORGANOCHLORINE PESTICIDE RESULTS

Table 2 is a summary of OCP results for the composite soil samples. The detected concentrations of OCPs in the composite soil samples were compared to respective threshold screening values for composite samples in Table 8 of the DTSC Interim Guidance document (DTSC, 2006) to determine whether further analysis of discrete samples was required.

Composited OCP samples exceeding the DTSC screening values for the respective composite grouping were re-analyzed as discrete samples. Based on this comparison, the discrete samples were analyzed from 35 of the composite samples.

Table 1 is a summary of OCP results for the discrete soil samples. The following OCPs and maximum concentrations were detected in discrete soil samples:

- 4,4-DDD' = 520 mg/kg
- 4,4-DDE' = 1,400 mg/kg
- 4,4-DDT' = 1,200 mg/kg
- Chlordane = 11,000 mg/kg
- Dieldrin = 500 mg/kg
- Endrin Ketone = 5 mg/kg

- Heptachlor = 28 mg/kg
- Heptachlor epoxide = 1,300 mg/kg

The following OCPs exceed the DTSC modified screening level for residential soil: chlordane, dieldrin, and heptachlor epoxide. 50 discrete soil samples exceeded the DTSC modified screening levels for residential soil. Figure 3 shows the soil samples with OCP concentrations that exceed the DTSC modified screening levels for residential soil.

DRAFT

## 5. Preliminary Human Health Screening Risk Evaluation

This section presents the results of a preliminary human health screening risk evaluation (HHSE) using the OCP concentrations measured in soil samples to estimate human health risk for resident at the Site. The HHSE was conducted using methodology presented in the “Preliminary Endangerment Assessment (PEA) Guidance Manual,” prepared by the California Department of Toxic Substance Control (DTSC) and dated January 1994 (revised October 2015; DTSC, 2015).

### 5.1 HAZARD IDENTIFICATION (CHEMICALS OF POTENTIAL CONCERN SELECTION)

Chemicals of potential concern (COPCs) were identified as any OPC detected above the laboratory detection limit.

### 5.2 EXPOSURE ASSESSMENT

The exposure assessment includes a description of the most sensitive receptors, their possible exposure pathways (i.e., how they may come into contact with the COPCs at the Site), derivation of exposure point concentrations, and estimation of chemical intakes by the receptors.

#### 5.2.1 Potential Receptors and Exposure Pathways

The receptor with the greatest potential exposure was evaluated, the future on-Site resident, from possible exposures to Site-related OCP impacts. The following potentially complete exposure pathways were evaluated:

- Incidental ingestion of soil;
- Inhalation of fugitive dust and VOCs in ambient air; and
- Dermal contact with soil.

It was conservatively assumed that resident would be present at the Site for 24 hours per day, 350 days per year, for 26 years (6 years as a child, and 20 years as an adult).

#### 5.2.2 Exposure Point Concentrations

The maximum detected OCPs in soil at the Site were used to estimate exposure point concentration concentrations (EPCs) for the on-Site resident.

#### 5.2.3 Estimation of Chemical Intakes and Exposure Concentrations

COPC intakes and exposure concentrations were estimated using the methodology in the PEA Guidance Manual (DTSC, 2015).

### 5.3 TOXICITY ASSESSMENT

The toxicity values used to identify the California toxicity values is based on the recommendations in the Preliminary Endangerment Assessment (PEA) Guidance Manual (DTSC, 2015).

## 5.4 SUMMARY OF RISK CHARACTERIZATION RESULTS

A summary of the estimated risk results is presented below; the associated risk calculations are presented in Appendix B.

The total non-cancer hazard for each receptor is presented as an estimated total hazard index (HI) and the total cancer risk for each receptor is presented as an estimated cumulative incremental lifetime cancer risk (ILCR).

### 5.4.1 Total Noncancer Hazard Index

An HI of less than 1 indicates that it is unlikely that adverse human health effects will occur during a lifetime in an exposed population, including sensitive subpopulations (USEPA, 1989). Most environmental programs employ an HI of unity (i.e., 1) as an acceptable target for risk decisions. The most explicit directive comes from the federal Superfund program (USEPA, 1990), which is also Cal/EPA policy. This directive specifies an HI of 1 as the acceptable target for risk management decisions. This noncancer risk threshold was used in this HHRA for each receptor as the acceptable total HI to assess whether exposure to COPCs at the Site may pose an adverse noncarcinogenic effect.

### 5.4.2 Cumulative Incremental Lifetime Cancer Risk

A total ILCR of  $10^{-6}$  and  $10^{-4}$  corresponds to theoretical probability of 1 chance in 1 million to 1 chance in ten thousand, which is in addition to or excess of the background cancer risk. Potential risk estimates between  $10^{-6}$  and  $10^{-4}$  require risk management decisions based on site-specific land use/exposure scenarios and may or may not require remediation or mitigation (USEPA, 1990). It is generally accepted in the regulatory community that risk estimates equal to or less than  $10^{-6}$  do not require remediation or mitigation measures.

California Proposition 65 (1986, Safe Drinking Water and Toxic Enforcement Act of 1986, Proposition 65, Health and Safety Code Section 25249.5 et seq.) requires specific notification and warning for exposure to carcinogens above the “no significant risk level,” which is based on a  $10^{-5}$  excess lifetime cancer risk.

A cumulative ILCR threshold of  $10^{-6}$  was used in the HHSE to assess whether exposure to COPCs at the Site may pose an unacceptable cumulative ILCR for the residential receptors. These target cumulative ILCR values are within the range of ILCRs considered to be acceptable.

### 5.4.3 Summary of Risk Characterization Results

Based on the results of this HHSE and using DTSC default exposure assumptions for the future on-Site resident and maximum COPC concentrations in indoor air concentrations, the ILCR is  $6 \times 10^{-5}$  and the total HI is 2. The cumulative ILCR is greater than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is greater than the acceptable total HI of 1. Therefore, mitigation is necessary to protect the future on-Site resident.

## 6. Conclusions and Preliminary Recommendations

Based on our review of the soil samples results for the Site, we present the following preliminary conclusions and recommendations.

- DTSC modified screening levels for residential soil were exceeded in soil collected from 27 of the 30 houses sampled.
- Lead was detected at a concentration greater than the DTSC modified screening level for residential soil of 80 mg/kg in 48 of the surface (0-0.5 feet bgs) soil samples. The subsurface (2-2.5 feet bgs) soil samples analyzed did not exhibit lead concentrations greater than 80 mg/kg. Therefore, it appears that lead concentrations greater than 80 mg/kg are limited to the upper two feet of soil based on the sampling and analysis performed. Lead concentrations exceeded the DTSC modified screening level for residential soil at 25 of the 30 houses sampled.
- Detected arsenic concentrations are less than the DTSC Schools Program screening level of 12 mg/kg (DTSC, 2008).
- OCPs were detected in discrete soil samples at concentrations greater than the DTSC modified screening levels for residential soil in 39 of the discrete surface soil samples and 11 of the discrete subsurface samples. OCP concentrations exceeded the DTSC modified screening level for residential soil at 22 of the 30 houses sampled. Based on the results of this HHSE for the future on-Site resident, the cumulative ILCR is greater than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is greater than the acceptable total HI of 1. Therefore, mitigation is necessary to protect the future on-Site resident.
- We recommend additional soil sampling and analysis prior to demolition and/or grading activities to identify the lateral extent of lead concentrations in soil and the lateral and vertical extent of OCP concentrations in soil greater than the DTSC modified screening levels.

Attention: Mr. Kyle McDonald

Subject: Addendum to the Preliminary Limited Environmental Site Investigation  
UC Riverside – North District Development  
North of West Linden Street and East of Canyon Crest Drive  
Riverside, California

Ladies and Gentlemen:

Haley & Aldrich, Inc. (Haley & Aldrich) prepared this Addendum to the Preliminary Limited Environmental Site Investigation Report for the proposed North District Development (Site). The Site is located at the University of California, Riverside and is northeast of the intersection of Canyon Crest Drive and West Linden Street in Riverside, California. The supplemental investigation presented herein was conducted to provide additional information regarding the lateral and vertical extent of lead- and organochlorine pesticide-impacted soil identified at the Site during the Preliminary Limited Environmental Site Investigation conducted by Haley & Aldrich in 2017.

We appreciate the opportunity to provide our services to you on this project. If you have any questions, please call.

Sincerely yours,  
HALEY & ALDRICH, INC.

2	Site Plan with Sample Locations

# 1. Introduction

This report presents the results of our Addendum to the Preliminary Limited Environmental Site Investigation for the proposed North District Residential Development (Site) located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California. The Site is bounded by West Blaine Street to the north, Canyon Crest Drive to the west, West Linden Street to the south, and University of California Riverside (UCR) campus facilities to the east, as shown on Figure 1. Most of the main UCR campus is located to the south of the Site.

## 1.1 BACKGROUND AND EXISTING SITE CONDITIONS

Currently, the approximately 55-acre site is occupied by Canyon Crest Student Housing, a complex of single-story student housing units located north of the main UCR campus. Storage and maintenance facilities, including permanent structures and modular units, are present in the northwest and southeast portions of the Site. Typical residential above and underground utilities are present throughout the development. A large park and playground is located in the western portion of the Site, south of Cherry Street. There are nine asphalt-paved residential streets and several gravel roads. Based on our review of readily available historical information and aerial photographs, much of the existing development was constructed as military housing in 1940, before which time the Site was occupied by citrus groves.

## 1.2 PROJECT DESCRIPTION

The proposed development project is based on “Master Plan Option 6 Phase I” prepared by Solomon Cordwell Buenz. We understand that the proposed project includes demolition of the existing Canyon Crest development and construction of four seven-story, L-shaped and C-shaped residence halls each to be used for multi-student housing, parking lots, and landscaping and hardscaping. The structures are planned with ground levels at or near existing grades. It is our understanding that children will not be residing in the residence halls.

The proposed multi-student residence halls are located within an approximately 7.9-acre rectangular area north of the intersection of Aberdeen Drive and West Linden Street. A proposed parking lot is located east of the residence hall site, spanning an area of approximately 3.5 acres, with driveways connecting the lot to West Linden Street and Watkins Drive. A second parking lot is proposed adjacent to Blaine Street and Watkins Avenue and spans approximately 5.5 acres at the northeast area of the site. A square-shaped, 3-acre landscape area is proposed, separating this northern parking lot from the residence halls. Two additional parking areas are proposed to the east and west of the landscaped area; however, the conceptual drawing does not depict a specific layout of these improvements.

## 1.3 PURPOSE

Based on our review of the Phase I Environmental Site Assessment prepared for the Site by the University of California Office of the President – Risk Services dated September 20, 2016, and the Phase I Environmental Site Assessment prepared for the Site by Haley & Aldrich dated May 11, 2018, the following environmental concerns were identified at the Site:

- Previous potential use of lead-based paint at the Site due to the age of the residences (constructed prior to 1979);

- Previous potential use of termiticides at the Site due to the age of the residences (constructed prior to 1989); and
- Previous potential use of arsenic at the Site due to previous agricultural activities dating prior to the 1950s.

Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017. Soil samples were collected at the Site and analyzed for lead, organochlorine pesticides (OCPs), and arsenic to evaluate whether the potential presence of lead-based paint, potential historical termiticide application, and historical agricultural activities, respectively, may have impacted soil. Soil sample analytical results were used to evaluate potential risk to human health. Soil sample results from the 2017 investigation are presented in Appendix A.

Based on the findings of the 2017 preliminary environmental investigation, arsenic concentrations in soil samples ranged between 1.85 and 7.65 milligrams per kilogram (mg/kg) and were less than the California Department of Toxic Substances Control (DTSC) Schools Program screening level of 12 mg/kg (DTSC, 2008). Therefore, additional assessment of arsenic was not conducted for this investigation.

Based on the findings of the 2017 investigation, DTSC residential land use screening levels as identified in the “Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3: DTSC-modified Screening Levels (DTSC-SLs)” (HHRA Note 3) prepared by the Cal/EPA DTSC and dated June 2018 (DTSC, 2018) for lead (at 0.5 feet below ground surface [bgs]) and OCPs (both at 0.5 and 2 feet bgs) in soil were exceeded in soil samples collected at the Site. Therefore, additional assessment was proposed to assess the extent of lead (laterally) and OCPs (vertically and laterally) at the Site near select structures that were previously assessed that exhibited lead and OCP concentrations greater than DTSC residential land use screening levels.

## 2. Field Investigation

The scope of work was developed based on the DTSC guidance document titled “Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers” dated June 9, 2006. Soil sampling was conducted at select locations that exceeded DTSC residential land use screening levels for lead and OCPs during the 2017 preliminary environmental investigation.

Soil sampling activities were conducted at the Site on March 29 and 30, 2018. Soil sample locations are shown on Figure 2. A total of 41 soil boring locations were hand augured at the Site by Interphase Environmental under the oversight of Haley & Aldrich. Following is a description of soil sampling activities conducted to provide additional information for to assess the vertical and lateral extent of lead and OCPs at the Site.

- Vertical Assessment: Eleven (11) locations that previously exceeded OCP DTSC screening levels at 2 to 2.5 bgs during the 2017 preliminary environmental investigation were selected for vertical assessment. These boring locations are identified with a green highlight on Figure 2. Soil samples were collected using a hand auger and slide hammer at 3 to 3.5 feet bgs and 4 to 4.5 feet bgs from each soil boring in six-inch acetate sleeves (for a total of 22 soil samples plus ten percent duplicates). The soil samples were stored in a chilled ice chest and transported to Eurofins Calscience, a California-certified environmental laboratory, under chain of custody protocol. The 3 to 3.5 feet bgs soil samples were analyzed for OCPs by United States Environmental Protection Agency (EPA) Method 8081; the 4 to 4.5 feet bgs samples were placed on hold pending results of the 3 to 3.5 feet soil samples.
- Lateral Assessment: Ten (10) locations that previously exceeded lead and OCP DTSC residential land use screening levels at 0.5 feet bgs during the 2017 preliminary environmental investigation were selected for lateral assessment. These boring locations are identified with a pink highlight on Figure 2. Step-out soil borings were advanced at approximately 2, 4, and 6 feet laterally from these original locations (for a total of 30 step-out borings). Soil samples were collected using a hand auger and slide hammer at 0 to 0.5 feet bgs and 2 to 2.5 feet bgs from each soil boring in six-inch acetate sleeves (for a total of 57 soil samples plus ten percent duplicates). The 2 to 2.5 feet bgs samples attempted to be collected at 880 Peach Street were not collected due to auger refusal, and refusal was also encountered at another location on Avocado Street at 5 feet bgs during the geotechnical investigation performed by Haley & Aldrich in 2018; the cause of the refusal is unknown. The soil samples were stored in a chilled ice chest and transported to Eurofins Calscience, a California-certified environmental laboratory, under chain of custody protocol. The 2-foot step out samples were analyzed for OCPs by EPA Method 8081 and lead by EPA Method 6010. The step-out samples collected at 4 and 6 feet laterally from the original borings were placed on hold at the laboratory pending results of the 2-foot step-out boring samples.

The hand auger and slide hammer were decontaminated between the collection of each sample by washing with a tri-sodium phosphate-based detergent and tap water, followed by successive rinses with tap water, and a final rinse in deionized water. Decontamination water was transferred into a 55-gallon Department of Transportation (DOT)-approved drum and stored on-Site pending off-Site disposal. Soil borings were backfilled with the soil cuttings.

### 3. Soil Sample Results

Soil analytical results are summarized below and in Table 1. Laboratory reports are included in Appendix B.

#### 3.1 LEAD RESULTS

Lead concentrations were less than the DTSC residential land use screening level with the exception of two step out locations which contained lead concentrations of 94 and 89.1 mg/kg at 0.5 feet bgs, just slightly above the DTSC residential land use screening level of 80 mg/kg. These two samples were collected 2 and 4 feet away from the original sample location in this area (which was collected one foot away from the structure during the 2017 investigation) that exhibited a concentration of 333 mg/kg at 0.5 feet bgs, demonstrating decreasing concentrations with lateral distance. Therefore, it appears that lead is generally delineated at the Site at a depth of 2 feet bgs and a distance of 3 feet from each structure.

#### 3.2 ORGANOCHLORINE PESTICIDE RESULTS

With the exception of chlordane and dieldrin, the detected concentrations of OCPs in the soil samples did not exceed DTSC residential land use screening levels. Chlordane or dieldrin concentrations exceeded DTSC residential land use screening levels in only three of the initial 2-foot lateral step out samples (identified with a "B" in the sample name on Table 1). At these three locations, chlordane and dieldrin concentrations were either less than the DTSC residential land use screening levels or showed decreasing concentrations when comparing the original soil sample (collected one foot away from the structure during the 2017 investigation) to the 4- and 6- foot lateral step out samples analyzed (identified with a "C" and "D" in the sample name on Table 1). Vertical delineation of OCPs was generally observed at a depth of 3 feet bgs. Therefore, it appears the OCPs are generally delineated at the Site at a depth of 3 feet bgs and a distance of 3 feet from the structures.

## 4. Human Health Risk Evaluation

This section presents the results of a human health risk evaluation (HHRE) using the lead and OCP concentrations measured in soil samples to estimate human health risks for a future on-Site student resident at the Site. The HHRE was conducted in a manner generally consistent with the “Preliminary Endangerment Assessment (” prepared by the California Department of Toxic Substance Control (DTSC) and dated January 1994 (revised October 2015; DTSC, 2015), the “Risk Assessment Guidance for Superfund, Volume I, Human Health Evaluation Manual (Part A), Interim Final” (RAGS Part A) prepared by EPA and dated December 1989 (EPA, 1989), and Site-specific exposure characteristics. The HHRE calculations are presented in Appendix C.

### 4.1 HAZARD IDENTIFICATION (CHEMICALS OF POTENTIAL CONCERN SELECTION)

Chemicals of potential concern (COPCs) were identified as lead and any OPC detected in vadose zone soil above the laboratory detection limit during both the 2017 and 2018 soil sampling events at the Site. Arsenic concentrations in soil were less than the DTSC Schools Program screening level of 12 mg/kg and were not further evaluated.

### 4.2 EXPOSURE ASSESSMENT

The exposure assessment includes a description of the most sensitive receptors, their possible exposure pathways (i.e., how they may come into contact with the COPCs at the Site), derivation of exposure point concentrations, and estimation of chemical intakes by the receptors.

#### 4.2.1 Potential Receptors and Exposure Pathways

It was assumed that the receptor with the greatest potential exposure, the future on-Site student resident, may be exposed to COPCs in soil at the Site. The following potentially complete exposure pathways were evaluated:

- Incidental ingestion of soil;
- Dermal contact with soil; and
- Inhalation of fugitive dust in ambient air.

It was conservatively assumed that a student resident would be present at the Site for 24 hours per day, 350 days per year, for 4 years as an adult. This is conservative, because a student would likely reside at the residence hall for less than 4 years and less than 350 days per year.

#### 4.2.2 Exposure Point Concentrations

The concentrations soil used to estimate exposure point concentrations (EPCs) for the future on-Site student resident were identified as either the maximum detected concentrations or 95% upper confidence levels (95% UCLs) concentrations in soil at the Site (collected during the 2017 and 2018 investigations). The 95% UCL concentrations were calculated using the EPA ProUCL Version 5.1.002 statistical software (ProUCL). The 95% UCL calculations are presented in Appendix C. EPCs are presented in Table 2.

### 4.2.3 Estimation of Chemical Intakes and Exposure Concentrations

COPC intakes and exposure concentrations were estimated using the methodology in the PEA Guidance Manual (DTSC, 2015) and RAGS Part A (EPA, 1989).

## 4.3 TOXICITY ASSESSMENT

The toxicity values used in the HHRE were selected using the methodology described in the “Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3: DTSC-modified Screening Levels (DTSC-SLs)” (HHRA Note 3) prepared by the Cal/EPA DTSC and dated June 2018 (DTSC, 2018). The selected toxicity values are listed in the calculations presented in Appendix C.

## 4.4 SUMMARY OF RISK CHARACTERIZATION RESULTS

A summary of the estimated risk results is presented below; the associated risk calculations are presented in Appendix C.

The total non-cancer hazard for each receptor is presented as an estimated total hazard index (HI) and the total cancer risk for each receptor is presented as an estimated cumulative incremental lifetime cancer risk (ILCR).

### 4.4.1 Total Noncancer Hazard Index

Most environmental programs employ an HI of unity (i.e., 1) as an acceptable target for risk decisions. The most explicit directive comes from the federal Superfund program (EPA, 1990), which is also Cal/EPA policy. This directive specifies an HI of 1 as the acceptable target for risk management decisions. This noncancer risk threshold was used in this HHRE for the future on-Site student resident as the acceptable total HI to assess whether exposure to COPCs at the Site may pose an adverse noncarcinogenic effect.

### 4.4.2 Cumulative Incremental Lifetime Cancer Risk

A total ILCR of  $10^{-6}$  and  $10^{-4}$  corresponds to theoretical probability of 1 chance in 1 million to 1 chance in ten thousand, which is in addition to or excess of the background cancer risk. Potential risk estimates between  $10^{-6}$  and  $10^{-4}$  require risk management decisions based on site-specific land use/exposure scenarios and may or may not require remediation or mitigation (EPA, 1990). It is generally accepted in the regulatory community that risk estimates equal to or less than  $10^{-6}$  are de minimus and, therefore, do not require remediation or mitigation measures.

California Proposition 65 (1986, Safe Drinking Water and Toxic Enforcement Act of 1986, Proposition 65, Health and Safety Code Section 25249.5 et seq.) requires specific notification and warning for exposure to carcinogens above a chemical-specific “no significant risk level,” which is based on a  $10^{-5}$  excess lifetime cancer risk. A cumulative ILCR threshold of  $10^{-6}$  was used in the HHRE to assess whether exposure to COPCs at the Site may pose an unacceptable cumulative ILCR for the future on-Site student resident.

#### 4.4.3 Lead

Potential human health effects from exposure to lead are typically inferred from blood lead levels, rather than intake and, as such, are not amenable to the above risk estimation approach. Therefore, the EPC for lead was compared to the DTSC residential land use screening level as identified by HHRA Note 3 (DTSC, 2018) of 80 mg/kg. This comparison is conservative because the residential DTSC screening level is based on a child receptor and children will not be residing at the Site.

#### 4.4.4 Summary of Risk Characterization Results

Based on the results of this HHRE for the future on-Site student resident, the ILCR is  $3 \times 10^{-7}$  and the total HI is 0.02. The cumulative ILCR is less than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is less than the acceptable total HI of 1. The lead EPC at the Site is 79 mg/kg, which is less than the residential DTSC screening level of 80 mg/kg. Therefore, mitigation is not necessary to protect the future on-Site student resident.

## 5. Conclusions

Based on our review of the soil samples results for the Site, we present the following conclusions:

- Soil samples were collected from around 30 of the 185 structures located at the Site.
- Over 200 soil samples were collected and analyzed for arsenic, lead, and/or OCPs.
- The U.S. Department of Housing and Urban Development “Guidelines for the Evaluation and Controls of Lead-Based Paint Hazards in Housing” (HUD, 2012) recommends that soil should be sampled from around 20 structures for developments with 176-225 similar dwellings. Therefore, since soil was sampled from around 30 structures at the Site and over 200 samples were collected and analyzed, adequate soil sampling and analysis was conducted to evaluate the Site for future redevelopment as student housing.
- Detected arsenic concentrations are less than the DTSC Schools Program screening level of 12 mg/kg (DTSC, 2008).
- Step-out soil samples were collected at 10 of the structures that exhibited elevated concentrations of lead and OCPs. Based on the results of the step out sampling, elevated lead and OCP soil concentrations are generally delineated at a depth of 3 feet bgs and a distance of 3 feet from the structures.
- Based on the results of this HHSE for the future on-Site student resident, the ILCR is  $3 \times 10^{-7}$  and the total HI is 0.02. The cumulative ILCR is less than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is less than the acceptable total HI of 1. The lead EPC at the Site is 79 mg/kg, which is less than the residential DTSC screening level of 80 mg/kg. Therefore, mitigation is not necessary to protect the future on-Site student resident.

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

# Contents

Client Project Name: ACC-UCR 131648-003/2.2

Work Order Number: 18-03-2553

1	Work Order Narrative. . . . .	3
2	Sample Summary. . . . .	4
3	Detections Summary. . . . .	6
4	Client Sample Data. . . . .	8
	4.1 EPA 6010B ICP Metals (Solid). . . . .	8
	4.2 EPA 8081A Organochlorine Pesticides (Solid). . . . .	10
5	Quality Control Sample Data. . . . .	35
	5.1 MS/MSD. . . . .	35
	5.2 LCS/LCSD. . . . .	38
6	Sample Analysis Summary. . . . .	41
7	Glossary of Terms and Qualifiers. . . . .	42
8	Chain-of-Custody/Sample Receipt Form. . . . .	43

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/29/18. They were assigned to Work Order 18-03-2553.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq$  15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 6010B	EPA 3050B	935	ICP 7300	1
EPA 8081A	EPA 3545	669	GC 41	1
EPA 8081A	EPA 3545	1096	GC 41	1

## Glossary of Terms and Qualifiers

Work Order: 18-03-2553

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

7	Glossary of Terms and Qualifiers. . . . .	16
8	Chain-of-Custody/Sample Receipt Form. . . . .	17

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/29/18. They were assigned to Work Order 18-03-2553.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq$  15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

## Sample Summary

## Sample Analysis Summary Report

Work Order: 18-03-2553

Page 1 of 1

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 8081A	EPA 3545	669	GC 44	1
EPA 8081A	EPA 3545	1096	GC 41	1

## Glossary of Terms and Qualifiers

Work Order: 18-03-2553

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins CalScience (CalScience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, CalScience is not responsible, legally or otherwise. The client or recipient agrees to indemnify CalScience for any defense to any litigation which may arise.

Client Project Name: ACC-UCR 131648-003/2.2

Work Order Number: 18-03-2553

6	Sample Analysis Summary. . . . .	10
7	Glossary of Terms and Qualifiers. . . . .	11
8	Chain-of-Custody/Sample Receipt Form. . . . .	12

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/29/18. They were assigned to Work Order 18-03-2553.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 8081A	EPA 3545	669	GC 41	1

Return to Contents

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/30/18. They were assigned to Work Order 18-03-2654.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq$  15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

## Glossary of Terms and Qualifiers

Work Order: 18-03-2654

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/30/18. They were assigned to Work Order 18-03-2654.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

## Sample Analysis Summary Report

Work Order: 18-03-2654

Page 1 of 1

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 6010B	EPA 3050B	935	ICP 7300	1
EPA 8081A	EPA 3545	669	GC 41	1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE RECEIPT CHECKLIST

COOLER 2 OF 2

CLIENT: Haley + Aldrich

DATE: 03/30/2018

**TEMPERATURE:** (Criteria: 0.0°C – 6.0°C, not frozen except sediment/tissue)

Thermometer ID: SC6 (CF: +0.2°C); Temperature (w/o CF): 4.3 °C (w/ CF): 4.5 °C;  Blank  Sample

Sample(s) outside temperature criteria (PM/APM contacted by: \_\_\_\_\_)

Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling

Sample(s) received at ambient temperature; placed on ice for transport by courier

Ambient Temperature:  Air  Filter

Checked by: 617

**CUSTODY SEAL:**

Cooler  Present and Intact  Present but Not Intact  Not Present  N/A

Sample(s)  Present and Intact  Present but Not Intact  Not Present  N/A

Checked by: 617

Checked by: 617

**SAMPLE CONDITION:**

	Yes	No	N/A

**EQUATIONS:**

$EPC_{[PARTICULATE]} = EPC_{[SOIL]} \times PARTICULATE_{[AIR]} \times 1E-06 \text{ [kg/mg]}$

where:  
 $PARTICULATE_{[AIR]} = (1/PEF \times 1E+09 \text{ ug/kg}) \text{ or Measured/Modelled}$   
 and:  
 $PEF \text{ (m}^3/\text{kg)} = Q/C \times [(3600 \text{ s/hr}) / ((0.036 \times (1-V) \times (U_m/U_t)^3 \times F(x)))]$

PARAMETER/DEFINITION	UNITS	DEFAULT	Source
PARTICULATE <sub>[Air]</sub> / Particulate concentration in air	ug/m <sup>3</sup>	0.74	Calculated or measured
Measured or modeled PARTICULATE <sub>[Air]</sub>	ug/m <sup>3</sup>		Measured value
PEF / Particulate emission factor	m <sup>3</sup> /kg		Guidance value
PEF / Particulate emission factor	m <sup>3</sup> /kg	1.36E+09	Calculated here
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m <sup>2</sup> -s per kg/m <sup>3</sup>	93.77	Calculated / USEPA, 2014 [a]
V / Fraction of vegetative cover	unitless	0.5	Site-specific, estimated
U <sub>m</sub> / mean annual windspeed	m/s	4.69	Site-specific / USEPA, 2014
U <sub>t</sub> / equivalent threshold value of wind speed at 7 m	m/s	11.32	USEPA, 2014
F(x) / function dependant on U <sub>r</sub> /U <sub>t</sub> derived using Cowherd et al. (1985)	unitless	1.94E-01	Calculated / USEPA, 2014

USEPA, 2014. Regional Screening Levels.

A	B	C	D	E	F	G	H	I	J	K	L
53	<b>Gamma ROS Statistics using Imputed Non-Detects</b>										
54	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs										
55	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)										
56	For such situations, GROS method may yield incorrect values of UCLs and BTVs										
57	This is especially true when the sample size is small.										
58	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates										
59	Minimum	0.01							Mean	0.58

Attention: Mr. Kyle McDonald

Subject: ASTM Phase I Environmental Site Assessment  
UC Riverside – North District Development  
North of West Linden Street and East of Canyon Crest Drive  
Riverside, California

Ladies and Gentlemen:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, located at the University of California Riverside – North District Development, located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California (herein referred to as the “subject site”). This work was performed by Haley & Aldrich, Inc. (Haley & Aldrich), in accordance with our proposal to American Campus Communities dated January 12, 2018 (“Agreement”) as authorized on March 30, 2018. This Phase I was conducted in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule).

The objective of a Phase I is to assess whether known and suspect “recognized environmental conditions” (REC), historical RECs (HREC), or controlled RECs (CREC) are associated with the subject site, as defined in the ASTM E 1527-13 Standard.

Thank you for the opportunity to perform these services for you. Please do not hesitate to contact us if you have any questions or comments.

American Campus Communities

## Executive Summary

Haley & Aldrich, Inc. (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of the University of California Riverside (UCR) - North District Development property in Riverside, California (herein referred to as the “subject site”). The scope of work is described and conditioned by our proposal dated January 12, 2018. This Phase I was performed for American Campus Communities who seeks to demolish existing parking lots, driveways, and structures, and redevelop with four, 7-story, L-shaped and C-shaped residence halls, parking lots, and landscaping and hardscaping. This Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and [All Appropriate Inquiries \(AAI\) Rule](#)<sup>1</sup>.

### SUBJECT SITE DESCRIPTION

The subject site is bounded by Canyon Crest Drive to the west, West Linden Street to the south, UCR campus facilities to the east, and Blaine Street to the north. The main UCR campus is located to the south of the subject site, across West Linden Street.

Currently, the approximately 55-acre subject site is occupied by the Canyon Crest Student Housing development, a complex of single-story student housing units located north of the main UCR campus. Storage and maintenance facilities, including permanent structures and modular units, are present in the northwestern portions of the site. A park with a playground is present in the western portion of the subject site, south of Cherry Street. There are nine asphalt-paved residential streets within the development in addition to several gravel roads. Based on our review of readily available historical information and aerial photographs, much of the existing development was constructed as military housing in 1940, and prior to that time, the subject site was covered with citrus groves.

A Limited Phase II Environmental Site Investigation was conducted by Haley & Aldrich dated March 2018 to assess previous potential use of organochlorine pesticides (OCPs), arsenic, and lead at the subject site due to previous agricultural activities in the 1950s. The results of the investigation indicated that OCPs and lead concentrations in soil at the subject site are above Department of Toxic Substances Control (DTSC) modified screening levels for residential land use, and additional evaluation was recommended.

### OBJECTIVE

The objective of a Phase I is to assess whether “[recognized environmental conditions](#)” (REC), [historical RECs](#) (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the “[business environmental risk](#)” associated with the subject site. Our opinion regarding an REC's potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intention to

---

<sup>1</sup> American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) (“ASTM E 1527-13 Standard”). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

and redevelop the site with four, 7-story, L-shaped and C-shaped residence halls, parking lots, and landscaping and hardscaping.

## RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

Two RECs were identified in connection with the subject site.

REC #1: Historical use of lead-based paint

Based on the age of the structures located at the subject site, there is a potential that lead-based paint was used historically at the subject site. Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017 (Haley & Aldrich, 2017). Soil samples were collected at the subject site and analyzed for lead to evaluate the potential presence of lead in soil. Based on the findings of the 2017 investigation, soil samples collected and analyzed at the subject site contained lead above the DTSC modified screening level for residential land use.

REC #2: Historical use of termiticides

Based on the age of the structures located at the subject site, there is a potential that organochlorine pesticides (OCPs) as termiticides were used historically at the subject site. Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017 (Haley & Aldrich, 2017). Soil samples were collected at the subject site and analyzed for OCPs to evaluate the potential presence of these chemicals in soil. Based on the findings of the 2017 investigation, soil samples collected and analyzed at the subject site contained OCPs above their respective DTSC modified screening levels for residential land use.

## CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

## HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

HRECs were not identified in connection with the subject site.

### **DE MINIMIS CONDITIONS**

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which “do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” The ASTM E 1527-13 Standard notes that “conditions determined to be *de minimis* are not recognized environmental conditions.”

*De minimis* conditions were not identified in connection with the subject site.

### **SUMMARY**

In summary, we identified one REC and no HRECs or CRECs during this Phase I. The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

# 1. Introduction

This report presents the results of an ASTM Phase I (Phase I) conducted at the University of California Riverside (UCR) - North District Development in Riverside, California (herein referred to as the “subject site”). The approximately 55-acre subject site is occupied by the Canyon Crest Student Housing development is located northeast of the intersection of Canyon Crest Drive and West Linden Street, Riverside, California, as shown on the Project Locus, Figure 1. This Phase I was conducted in consideration of American Campus Communities’ intention to demolish existing parking lots, driveways, and structures, and redevelop with four, 7-story, L-shaped and C-shaped residence halls, parking lots, and landscaping and hardscaping.

## 1.1 OBJECTIVE

The objective of a Phase I is to assess whether “[recognized environmental conditions](#)” (REC), [historical RECs \(HREC\)](#), and [controlled RECs \(CREC\)](#) are associated with the subject site by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties as well as potential releases at surrounding properties that may impact the subject site. Our conclusions are intended to help the user evaluate the “[business environmental risk](#)” associated with the subject site.

RECs are defined in the ASTM E 1527-13 Standard as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or under conditions that pose a [material threat](#) of a future release to the environment.” The definitions of RECs, HRECs, and CRECs are included in the Glossary section of this report.

## 1.2 SCOPE OF SERVICES

This work was performed by (Haley & Aldrich) and this Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All [Appropriate Inquiries \(AAI\)](#) Rule<sup>2</sup> and in accordance with our proposal to American Campus Communities dated January 12, 2018 (“Agreement”) as authorized on March 30, 2018. The Phase I limitations are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use and interviewed a [key site manager](#) (site reconnaissance); reviewed federal, state, tribal, and local environmental database information, federal and state environmental files, previous reports (if identified and provided), and site historical use records; and formulated conclusions regarding the potential presence and impact of RECs.

---

<sup>2</sup> American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) (“ASTM E 1527-13 Standard”). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

### **1.3 NON-SCOPE CONSIDERATIONS**

The ASTM E 1527-13 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, and mold. These items were not included in this Phase I of the subject site.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, our assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as “electrical or hydraulic equipment known or likely to contain PCBs...to the extent visually and or physically observed or identified from the interview or records review.”

### **1.4 LIMITING CONDITIONS/DEVIATIONS**

Haley & Aldrich completed this Phase I in substantial conformance with the ASTM E 1527-13 Standard. In our opinion, no additions were made to or deviations and deletions made from the ASTM work scope in completing this Phase I.

### **1.5 USER RESPONSIBILITIES**

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E 1527-13 Standard and the AAI Rule. User responsibilities are discussed in Section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

## 2. Site Description

A description of the subject site is detailed in the sections below. Refer to Figure 1 for a project locus and Figure 2 for a site plan showing relevant site features and adjacent properties.

### 2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

Site Description		
Owner/Operator	University of California Riverside 900 University Avenue Riverside, California 92521	
Current Site Use	Canyon Crest Student Housing	
Size	Approximately 55 Acres	
USGS 7.5 Minute Topographic Map	Riverside East, 2012	
Site County	Riverside	
Parcel Information	Portion of 251-180-006	
Utilities	Water:	City of Riverside Public Utilities
	Sewerage:	City of Riverside Public Utilities
	Electricity:	City of Riverside Public Utilities
	Gas/Oil/LPG:	Southern California Gas Company
Heating/Cooling System	None	
Site Vicinity Description		
General Area Description	Residential/UCR Campus	
Adjoining Property Description	North:	Blaine Street and Retail Stores
	East:	Parking Lot 28 and the UCR Fleet Services Department
	South:	West Linden Street and UCR Campus
	West:	Canyon Crest Drive, student apartments, and athletic fields

### 2.2 PHYSICAL SETTING

Subject site geology and hydrology were evaluated based on readily available public information or references, and/or our experience and understanding of subsurface conditions in the vicinity of the subject site. In addition, Haley & Aldrich conducted a geotechnical investigation for the subject site dated March 6, 2018. It is unknown to what extent localized variations in groundwater depth and flow occur on the subject site.

Physical Setting		Source
Topography Summary	The subject site is generally flat.	1
Site Elevation	Approximately El. 1,080 feet above mean sea level	2
Overburden Soils	The subject site is primarily underlain by layers of poorly graded sand and silty sand. The sands are generally fine-to medium-grained, with some coarse sand and fine gravel occurring in some layers, including poorly graded sand with silt, and poorly graded sand with clay. The sands are typically medium dense to dense.	3
Depth to Groundwater	Unknown. Groundwater was not encountered at the subject site within any of the hollow-stem auger borings advanced to a maximum depth of 51.5 feet bgs in January 2018.	3
Surface Water Flow Direction	Surface water appears to flow towards the south, based on observed surface topography.	1
Regional Groundwater Flow Direction	Unknown	
Nearest Surface Water Body	The Gage Canal is located approximately 3,000 feet west of the subject site.	4

### 3. Previous Reports

Following is a summary of previously prepared reports for the subject site that were reviewed for this Phase I. Information contained in these reports is included herein. Relevant excerpts from these reports are included in Appendix B.

Based on our review of the Phase I prepared for the subject site by the University of California Office of the President – Risk Services dated September 20, 2016 (UCR, 2016), the following environmental concerns were identified at the subject site:

- Previous potential use of lead-based paint at the subject site due to the age of the residences;
- Previous potential use of termiticides at the subject site due to the age of the residences; and
- Previous potential use of arsenic at the subject site due to previous agricultural activities dating prior to the 1950s.

Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017 (Haley & Aldrich, 2017). Soil samples were collected at the subject site and analyzed for organochlorine pesticides (OCPs), lead, and arsenic to evaluate the potential presence of these chemicals in soil due to the previous activities noted above. Soil sample analytical results were used to evaluate potential risk to human health.

Based on the findings of the 2017 investigation, arsenic concentrations in soil samples were less than the California Department of Toxic Substances Control (DTSC) Schools Program screening level of 12 mg/kg (DTSC, 2008) and are considered to represent naturally occurring background concentrations. Therefore, additional assessment of arsenic was not conducted for this investigation.

Based on the findings of the 2017 investigation, soil samples collected and analyzed for lead and OCPs were above DTSC modified screening levels for residential land use (DTSC, 2018). Lead was detected at concentrations ranging up to 434 milligrams per kilogram. Chlordane and dieldrin were detected at concentrations ranging up to 11,000 micrograms per kilogram (ug/kg), 500 ug/kg, and 1,300 ug/kg respectively. Therefore, additional assessment was conducted in March 2018 to delineate lead and OCPs near a few structures that were previously assessed to conservatively estimate the volume of soil that may require removal around all structures during demolition activities.

## 4. Site History

Haley & Aldrich assessed past usage of the subject site and adjoining properties through a review of:

- Topographic maps dated 1901, 1942, 1947, 1953, 1967, 1980, and 2012;
- Aerial photographs dated 1931, 1938, 1949, 1953, 1967, 1975, 1978, 1985, 1989, 1994, 2006, 2010, and 2014;
- City directories dated 1921-2014;
- Previous reports; and
- Interviews with subject site personnel.

Copies of information obtained from historical references reviewed are included in Appendix C. Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1940 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period.

### 4.1 SUBJECT SITE

The subject site was reportedly citrus groves and vacant land, prior to the construction of bungalow-style residences built for military housing in 1940. In 1955, the University of California purchased the land and used it for family student housing. The residences are currently vacant.

The table below provides a detailed summary of pertinent information from the historical sources reviewed:

Dates	Description of Subject Site	Sources
1930s	Citrus groves.	Aerial Photographs, Topographic Maps
1940s - Present	Military/student housing residential units and roads have been constructed.	Aerial photograph, previous reports

### 4.2 ADJOINING PROPERTIES

The table below provides a summary of pertinent information from the historical sources reviewed regarding adjacent properties:

Dates	Description of Adjacent Properties	Sources
1930s	North: W. Blaine Street and citrus groves. South: Citrus groves. East: Citrus groves. West: Citrus groves.	Aerial Photographs, Topographic Maps
1940s	North: Same as above. South: Same as above. East: Same as above. West: Same as above.	Aerial Photographs
1950s	North: Same as above. South: Citrus groves are no longer present, and the surrounding property has been graded. East: Same as above. West: Citrus groves are no longer present, and the surrounding property has been graded.	Aerial Photographs
1960s	North: Commercial buildings have been constructed north of the subject site. South: UCR buildings and athletic fields. East: UCR buildings appear. West: Same as above	Aerial Photographs
1970s – 1980s	North: More commercial buildings constructed. South: Same as above. East: Same as above. West: Same as above.	Aerial Photographs
1990s - Present	North: Same as above. South: Same as above. East: Same as above West: Same as above.	Aerial Photographs

## 5. Environmental Records Review

### 5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Haley & Aldrich used the electronic database service, Environmental Data Resources (EDR) to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced agency records, located within the ASTM-specified approximate minimum search distances as shown in the table below. A description of each database searched is in Section 11.2 of this report. The complete environmental database report is provided in Appendix D. Pertinent information obtained from the database is summarized in Section 5.3 below.

Database Searched	Approximate Minimum Search Distance	Subject Site Listed?	Number of Sites within Search Distance <sup>1</sup>
1. NPL Sites	1 mile	No	0
2. Delisted NPL Sites	0.5 mile	No	0
3. CERCLIS <sup>2</sup> Sites	0.5 mile	No	0
4. CERCLIS-NFRAP <sup>2</sup> Sites	0.5 mile	No	1
5. Federal ERNS	Site only	No	Not Applicable
6. RCRA non-CORRACTS TSD Facilities	0.5 mile	No	1
7. RCRA CORRACTS TSD Facilities	1 mile	No	1
8. RCRA Generators	Site & Adjoining	No	1
9. Federal Institutional/Engineering Controls	Site Only	No	Not Applicable
10. State/Tribal Equivalent NPL Sites	1 mile	No	1
11. State/Tribal Equivalent CERCLIS <sup>2</sup> Sites	0.5 mile	No	5
12. State/Tribal Registered Storage Tanks	Site & Adjoining	No	2
13. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	0
14. State/Tribal Leaking Storage Tanks	0.5 mile	No	17
15. State/Tribal Institutional Controls/Engineering Controls	Site Only	No	Not Applicable
16. State/Tribal Voluntary Cleanup Sites	0.5 mile	No	0
17. State/Tribal Brownfield Sites	0.5 mile	No	0
18. Orphan Site List <sup>3</sup>	Site & Adjoining	No	2

Notes:

1. Some sites may be included on multiple databases.

2. The US EPA retired the CERCLIS database in October 2013. In January 2016, the Superfund Enterprise Management System (SEMS), which replaces the CERCLIS database, became active. The CERCLIS database records search included as part of this assessment includes currently ascertainable data from the SEMS and SEMS-Archive databases as reported through the database vendor.
3. Haley & Aldrich also searched the [Orphan Site](#) List provided in the database report for the subject site and sites adjoining the subject site. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped.

## 5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, we contacted the following state and local government agencies and searched applicable online databases. Relevant information obtained is included in the appropriate sections of the report and/or discussed in Section 5.3 below. Adjacent properties were also included in requests for additional information if a significant incident or release was identified. Those adjacent properties reviewed for this assessment include:

- UC Riverside Fleet Services / UC Riverside Central Steam Plant, 3401 Watkins Drive

Agency	Request Sent or Files Searched		Files Exist and are Available for Review	Files Reviewed
	Subject Site	Adjoining Properties		
SARWQCB <sup>1</sup>	Yes	Yes	Yes	Yes, for nearby property
DTSC <sup>2</sup>	Yes	No	No	No
County of Riverside DEH <sup>3,4</sup>	Yes	Yes	No	No

**Notes:**

1. The Santa Ana Regional Water Quality Control Board (SARWQCB) maintains information regarding environmental concerns, and regarding soil and water contamination issues.
2. The California Department of Toxic Substances Control (DTSC) maintains information regarding hazardous substance storage and storage tank use, and regarding soil and water contamination issues.
3. The County of Riverside Department of Environmental Health (DEH) maintains information regarding hazardous substance storage, storage tank use, water wells, and septic systems.
4. To date, no responses have been received from the Freedom of Information Act (FOIA) requests noted above. Based on the information obtained through our interviews with key site personnel, and our review of other records, it does not appear that responses to the FOIA requests should affect our conclusions regarding RECs on the site. However, when a response is received, it will be forwarded to American Campus Communities and, if it affects our conclusions regarding the site, American Campus Communities will be informed.

## 5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

### 5.3.1 Subject Site

One site was listed in the database report that is likely associated with the subject site.

Listing	Description	Potential Impact
T-Mobile West Corporation IE04479A, 680 W Linden Riverside, CA, Map ID 9	This site is listed on the FINDS database for radio/telephone communications, likely associated with the UCR radio station to the northwest of the subject site. Releases were not identified.	Not a REC.

### 5.3.2 Nearby Sites

Two sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the subject site (on the opposite side of a hydrogeologic barrier, distance from the site, location of the site relative to inferred groundwater flow, etc.), or their status (closed out release, etc.), several of the sites are not likely to adversely affect the subject site and are not discussed herein. Only those sites adjacent to the subject site and sites with a potential to have impacted the subject site are discussed below. The complete database report and relevant records review information is included in Appendix D.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
E-Z Serve #070135, 811 Blaine Street	LUST	A release of gasoline impacted soil only. The case was closed in 1992. Since groundwater was not impacted, this release is not likely to impact the subject site.	Not a REC.
UC Riverside Fleet Services / UC Riverside Central Steam Plant, 3401 Watkins Drive Map ID E22 0.16 miles east of the subject site	LUST, UST, HIST UST, CHMIRS	This facility is located on the north side of Linden Street, northeast of the subject site. Three USTs were removed from the subject site in the 1997 (10,000-gallon gasoline UST, a 6,000-gallon gasoline UST, and a 500-gallon waste oil UST). Soil samples during the UST excavation activities indicated that a release had occurred, and a LUST case was opened. The following maximum concentrations were detected in the UST excavation: 1,300 milligrams per kilogram (mg/kg) total petroleum hydrocarbons (TPH) gasoline, 21 mg/kg toluene, 16 mg/kg ethylbenzene, and 120 mg/kg xylenes.	Not a REC.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
UC Riverside Fleet Services / UC Riverside Central Steam Plant, 3401 Watkins Drive Map ID E22 0.16 miles east of the subject site  (Continued)		Benzene and methyl tert-butyl ether were not detected in the soil samples. Six borings were advanced up to 60 feet bgs to delineate the release. These constituents were not detected in the deepest soil samples collected from these borings, indicating that groundwater had not been impacted. The case was closed by the DEH on October 6, 2000.  The CHMIRS listing was reportedly a release of hydraulic oil from a Pepsi trailer truck.  Due to the distance from the subject site, and since groundwater was not impacted, this release is not likely to impact the subject site.	

**5.4 VAPOR MIGRATION**

The ASTM 1527-13 standard states that "for the purposes of this practice, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether or not we perceive a risk of vapor migration to the subject site.

To assess vapor migration risk, we conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on our records review, it is unlikely that a potential source of vapor migration currently exists beneath the subject site.

## 6. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe subject site conditions was conducted by Mathew Raitchel and Carly Nemanic of Haley & Aldrich on March 7, 2018. Access to the subject site was provided by UCR.

Haley & Aldrich also observed the exterior portions of the subject site, including the property boundaries, and observed adjoining property conditions from the subject site boundaries and/or public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the subject site or adjoining properties occurred during our site visit.

An interview with Amanda Grey, Environmental Health & Safety Manager of UCR, the [key site manager](#), was performed in conjunction with the site visit. Per the ASTM Standard, past owners, operators, and occupants of the subject site who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information in order interview past owners and/or operators at the subject site. Based upon historical data collected from other sources, this potential data gap is not expected to adversely impact the results of this assessment.

The findings of the site visit and interviews are discussed below. Site photographs are included in Appendix E.

ASTM E 1527-13 Standard Section 10.8 requires that, prior to the site visit, the current subject site owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Documents were not provided. Provided information is listed below.

### 6.1 CURRENT USE OF THE PROPERTY

The subject site is currently occupied by the Canyon Crest Student Housing Development and the KUCR radio station. The housing units are currently vacant.

### 6.2 GENERAL DESCRIPTION OF STRUCTURES

Structures on the subject site consist of single-story student housing units. Storage and maintenance facilities, including permanent structures and modular units, are present in the northwestern portions of the site. A park with a playground is present in the western portion of the site, south of Cherry Street.

### 6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

The use, storage and/or disposal of petroleum products or hazardous materials was not observed or reported at the subject site, with one exception. Paint was stored in up to 5-gallon capacity containers within a covered and fenced area in the central portion of the subject site. The area is asphalt, and evidence of staining or leaking was not observed on the asphalt surface.

## 6.4 OTHER SUBJECT SITE OBSERVATIONS

The table below summarizes items that were observed and/or reported at the subject site during the site visit other than those items related to use, storage, and disposal of petroleum or hazardous materials (described in Section 6.3 above). If items were observed or reported, they are further described either in the table or below.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	No	
Nearest Drinking Water Source	No	Drinking water is provided by the City of Riverside Public Utilities.
Sewage Disposal System	No	Sanitary sewer service is provided by the City of Riverside Public Utilities.
Septic System	No	
Unidentified Storage Containers	No	
Wastewater Discharge	No	
Stormwater Discharge	No	
Odors	No	
PCBs Associated with Electrical or Hydraulic Equipment	No	
Elevators (Traction or Hydraulic)	No	
Vehicle Maintenance Lifts	No	
Emergency Generators	No	
Sprinkler System Pumps	No	
Heating System	No	
Cooling System	No	
Stains or Corrosion on Floors, Walls, or Ceilings	No	
Floor Drains	No	
Sumps	No	
Catch Basins	No	
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	No	
Stressed Vegetation	No	
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Monitoring Wells	No	
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	No	
Abandoned Wells	No	

## 6.5 ADJOINING PROPERTY OBSERVATIONS

Adjoining properties are campus residence halls and apartments, parking lots, campus fleet services, and commercial/retail properties. Current adjoining properties are not anticipated to adversely impact the subject site.

## 6.6 USER RESPONSIBILITIES

The AAI Rule requires that the User of the report consider the following:

- Whether the user has specialized knowledge about previous ownership or uses of the subject site that may be material to identifying RECs;
- whether the user has determined that the subject site’s Title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- whether the user is aware of commonly known or reasonably ascertainable information about the subject site including whether or not the presence of contamination is likely on the subject site and to what degree it can be detected; and
- whether the user has prior knowledge that the price of the subject site has been reduced for environmentally related reasons.

While such information is not required to be provided by the environmental professional(s), the information can assist the environmental professional in identifying recognized environmental conditions. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an LLP to CERCLA liability.

Haley & Aldrich was not provided with a completed user responsibilities questionnaire; however, we do not anticipate this to affect the conclusions of this report.

## 7. Findings and Opinions

### 7.1 DATA GAPS

Our ability to identify and evaluate RECs at the subject site is conditioned upon [data gaps](#) identified as part of this Phase I. No significant data gaps were identified during the performance of this Phase I. Thus, it is our opinion that sufficient information was obtained to identify subject site conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Our opinion is limited by the conditions prevailing at the time our work is performed and the applicable regulatory requirements in effect.

### 7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

Our opinion regarding a REC's potential impact on the subject site is based on the scope of our work, the information obtained during our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intended use for the subject site.

Two RECs were identified in connection with the subject site.

REC #1: Historical use of lead-based paint

Based on the age of the structures located at the subject site, there is a potential that lead-based paint was used historically at the subject site. Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017 (Haley & Aldrich, 2017). Soil samples were collected at the subject site and analyzed for lead to evaluate the potential presence of lead in soil. Based on the findings of the 2017 investigation, soil samples collected and analyzed at the subject site contained lead above the DTSC modified screening level for residential land use.

REC #2: Historical use of termiticides

Based on the age of the structures located at the subject site, there is a potential that organochlorine pesticides (OCPs) as termiticides were used historically at the subject site. Haley & Aldrich conducted a “Preliminary Limited Environmental Site Investigation” dated June 9, 2017 (Haley & Aldrich, 2017). Soil samples were collected at the subject site and analyzed for OCPs to evaluate the potential presence of these chemicals in soil. Based on the findings of the 2017 investigation, soil samples collected and analyzed at the subject site contained OCPs above their respective DTSC modified screening levels for residential land use.

### 7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

### 7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as an environmental condition “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

HRECs were not identified in connection with the subject site.

### 7.5 DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which “do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” The ASTM E 1527-13 Standard notes that “conditions determined to be *de minimis* are not recognized environmental conditions.”

*De minimis* conditions were not identified in connection with the subject site.

## 8. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E 1527 of UC Riverside - North District Development, in Riverside, California, the property. Any exceptions to or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- REC #1: Historical use of lead-based paint
- REC #2: Historical use of termiticides

## 9. Environmental Professional Certification

The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of [Environmental Professional](#) as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Mathew T. Raithel  
Senior Technical Specialist

Robert K. Scott, P.G. 5334 (CA), CHg  
Senior Associate Hydrogeologist

## 10. Credentials

This Phase I report was prepared by Mathew Raithel, under the direct supervision of Robert K. Scott, who served as the Environmental Professional(s) for this project. Qualification information for the project personnel is provided below.

**Mathew T. Raithel**  
**Senior Technical Specialist**

This report was prepared by Mathew Raithel, who served as the project scientist for this project. Mr. Raithel has over 20 years of experience managing and conducting Phase I and Phase II environmental site assessments and investigations throughout Southern California and Arizona, including commercial and industrial facilities and linear projects such as electrical transmission lines and natural gas pipelines.

**Robert K. Scott, P.G. 5334 (CA), C.Hg.**  
**Senior Client Leader**

Robert Scott has over 29 years of experience in investigation, remediation, and closure of a wide range of contaminated sites, including large contaminated industrial properties. Mr. Scott is currently the program manager for redevelopment of over 10 large industrial properties in Southern California involving soil excavation, facility decommissioning, demolition, and construction oversight. He specializes in remedial investigations/feasibility studies, evaluation of remedial alternatives, hydrogeologic investigations, health risk assessment, contaminant fate and transport assessment and modeling, regulatory compliance, water resources studies, remediation of sites contaminated with petroleum hydrocarbons, chlorinated hydrocarbons, PCBs, OCPs and metals. Mr. Scott is also a recognized expert in the investigation and remediation of burn ash sites.

## 11. Glossary and Other Descriptions

### 11.1 GLOSSARY

**All Appropriate Inquiry (AAI)** — that inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 U.S.C §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

**Business Environmental Risk** — a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

**Controlled Recognized Environmental Condition (CREC)** — a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

**Data Gap** — a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

**De Minimis Conditions** — conditions which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

**Environmental Professional** — a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

**Historical Recognized Environmental Condition (HREC)** — a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

**Key Site Manager** — the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

**Material Threat** — a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

**Orphan Site** — (not ASTM E 1527-13 definition) — sites that could not be mapped due to poor or inadequate address information.

**Recognized Environmental Condition (REC)** — the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

## 11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix D. Those databases required by the ASTM E 1527-13 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).
2. **Delisted NPL Sites:** The Delisted National Priorities List (NPL) is a list of formal NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.
3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.
4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.
5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.
6. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.
7. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

8. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.
9. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.
10. **State and Tribal Equivalent NPL/CERCLIS Sites:** The (ASTM E 1527-13 Standard) requires searching “State and Tribal Equivalent NPL Sites.” In California, the equivalent NPL is the Response, which is maintained by the Department of Toxic Substances Control.
11. **State and Tribal Equivalent CERCLIS Sites:**  
The (ASTM E 1527-13 Standard) requires searching “State and Tribal Equivalent CERCLIS Sites.” In California, the equivalent CERCLIS is the ENVIROSTOR database, which is maintained by the Department of Toxic Substances Control.
12. **State and Tribal Registered Storage Tanks:** The SWRCB maintains a list of aboveground and underground storage tanks registered with the SWRCB.
13. **State and Tribal Landfills and Solid Waste Disposal Sites:** DTSC maintains a list of regulated waste disposal sites.
14. **State and Tribal Leaking Storage Tanks:** SWRCB maintains a list of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an Underground or Aboveground Storage Tank listed as the source.
15. **State and Tribal Institutional Controls/Engineering Controls:** DTSC maintains a list of sites with Institutional controls or Engineering controls in place.
16. **State and Tribal Voluntary Cleanup Sites:** DTSC maintains a list of Voluntary Cleanup sites.
17. **State and Tribal Brownfield Sites:** DTSC maintains a list of Brownfield sites which includes properties where redevelopment or re-use may be compromised by the presence or presumed presence of hazardous materials or petroleum.

## **APPENDIX A**

### **Phase I Environmental Site Assessment Limitations**

## APPENDIX A

### Haley & Aldrich, Inc. Limitations

Environmental site assessment (“ESA”) reports prepared by Haley & Aldrich, Inc. (Haley & Aldrich) are for the sole and exclusive use of its Client. Haley & Aldrich represents that the ESA was prepared in accordance with the ASTM International Standard E1527-13 entitled “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process” (“ASTM E 1527 13”). The findings, opinions, conclusions and information contained in the ASTM E 1527-13 ESA are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed.

All users of this ASTM E 1527-13 ESA are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms & Conditions, and Limitations for this ASTM E 1527-13 ESA. The findings, opinions, conclusions and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 ESA is prepared for the exclusive use of Haley & Aldrich’s client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Haley & Aldrich’s client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 ESA. Use of this ASTM E 1527-13 ESA by any person or entity, including by Haley & Aldrich’s client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E 1527-13 ESA is adequate for such other use. Use of this ASTM E 1527-13 ESA by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person’s or entity’s sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E 1527-13 ESA by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 ESA only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E 1527-13 ESA and the Proposal and its attachments, Terms & Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich’s reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party’s acceptance of the aforementioned conditions. Upon Haley & Aldrich’s receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley & Aldrich’s ASTM E 1527-13 ESA for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agrees to bind each of its respective successors and assigns to the aforementioned terms and conditions.

This ASTM E 1527-13 ESA reflects site conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E 1527-13 ESA preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 ESA. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E 1527-13 ESA is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 ESA preparation. Haley & Aldrich makes no express or implied representation that the information contained in the ASTM E 1527-13 ESA has continued viability after 180 days of the ASTM E 1527-13 ESA's completion date, and any use or reliance on the ASTM E 1527-13 ESA after 180 days of the ASTM E 1527-13 ESA's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E 1527-13 ESA. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

Attention: Mr. Drew Hecht

Subject: Preliminary Limited Environmental Site Investigation  
North District Predevelopment Studies  
North of West Linden Street and East of Canyon Crest Drive  
Riverside, California

Ladies and Gentlemen:

Enclosed is our preliminary limited environmental site investigation report for the proposed North District development located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California. The site is bounded by West Blaine Street to the north, Canyon Crest Drive to the west, West Linden Street to the south, and University of California Riverside (UCR) campus facilities to the east. The main UCR campus is located to the south of the site, across West Linden Street.

We appreciate the opportunity to provide our services to you on this project. If you have any questions, please call.

Sincerely yours,  
HALEY & ALDRICH, INC.

Mathew T. Raithel  
Senior Technical Specialist

# 1. Introduction

This report presents the results of our preliminary limited environmental site investigation for the proposed North District development (Site) located northeast of the intersection of Canyon Crest Drive and West Linden Street, in Riverside, California. The site is bounded by West Blaine Street to the north, Canyon Crest Drive to the west, West Linden Street to the south, and University of California Riverside (UCR) campus facilities to the east, as shown on Figures 1 and 2. The main UCR campus is located to the south of the site, across West Linden Street.

## 1.1 BACKGROUND AND EXISTING SITE CONDITIONS

Currently, the approximately 55-acre site is occupied by Canyon Crest Student Housing, a complex of single-story student housing units located north of the main UCR campus. Storage and maintenance facilities, including permanent structures and modular units, are present in the northwest and southeast portions of the site. Typical residential above and underground utilities are present throughout the development. A large park and playground is located in the western portion of the site, south of Cherry Street. There are nine asphalt-paved residential streets and several gravel roads. Based on our review of readily available historical information and aerial photographs, much of the existing development was constructed as military housing in 1940, before which time the Site was occupied by citrus groves.

## 1.2 PROJECT DESCRIPTION

The proposed project is still in the conceptual planning stage and details are still being developed. We understand that the proposed project is expected to include redevelopment of the existing housing complex with new multi-story housing units.

## 1.3 PURPOSE

Based on our review of the Phase I Environmental Site Assessment prepared for the Site, the following environmental concerns are identified at the Site:

- Previous potential use of lead-based paint at the site due to the age of the residences;
- Previous potential use of termiticides at the site due to the age of the residences; and
- Previous potential use of arsenic at the site due to previous agricultural activities dating prior to the 1950s.

Soil sampling was conducted to evaluate whether these historical activities may have impacted soil. Soil sample analytical results were used to evaluate potential risk to human health.

## 2. Scope of Work

The scope of work was developed based on the following California Department of Toxic Substances Control (DTSC) guidance documents, collectively referred to as the DTSC Guidance:

- “Interim Guidance Evaluation of School Sites with Potential Soil Contamination as a Result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers” dated 9 June 2006; and
- “Interim Guidance for Sampling Agricultural Properties (Third Revision)” dated 30 April 2008.

The DTSC Guidance recommends that a minimum of four soil samples be collected from around each residential structure. We recommended modifying this approach and collected soil samples from around 30 structures as a preliminary limited investigation, as described below.

The preliminary limited environmental site investigation consisted of collecting soil samples at depths 0.5 feet below ground surface (bgs) and 2.5 feet bgs using a hand auger at 30 residences at the Site, submitting soil samples for environmental analysis, evaluating soil sample analytical data, and preparing a preliminary limited site investigation report that summarizes our findings and preliminary recommendations.

### 3. Field Investigation

Soil sampling activities were conducted at the Site on March 27 through March 30, 2017. A total of 120 soil boring locations were hand augured at the Site by Interphase Environmental under the oversight of Haley & Aldrich. The locations of the soil borings are shown on Figure 2. Thirty (30) residences were selected for soil sampling activities; residences with both observed paint peeling and less visually observed paint peeling were selected. Four soil borings were advanced using a hand auger at each of the 30 selected residences (for a total of 120 soil boring locations). Soil borings were advanced within two feet of the residential structure. Locations were biased towards areas with visually peeling paint and areas of structural drainage. Soil samples were collected using the hand auger or slide hammer at 0-0.5 feet bgs and 2-2.5 feet bgs from each soil boring in laboratory-provided glass sample containers or acetate sleeves (for a total of 240 soil samples plus 14 duplicate samples). The soil samples were stored in a chilled ice chest and transported to Eurofins Calscience, a California-certified environmental laboratory, under chain of custody protocol.

The soil samples were analyzed for the following based on the DTSC guidance:

- Each of the 0-0.5 foot samples, including 12 duplicate samples (total of 132 soil samples), were initially analyzed for lead by United States Environmental Protection Agency (USEPA) Method 6010. Based on the results of the 0-0.5 foot samples, 48 of the 2-2.5 foot samples were analyzed for lead (see Section 4.1).
- Twenty (20) of the 0-0.5 foot samples, including two duplicate samples (total of 22 soil samples), were analyzed for arsenic by USEPA Method 6010.
- Up to four discrete samples collected at similar depths from each residential property were composited into one composite soil sample (the discrete soil samples were composited into a total of 61 composite soils samples). The 61 composite soil samples (31 composite samples from 0-0.5 feet bgs and 30 composite samples from 2-2.5 feet bgs) and including six duplicate samples (total of 67 composite soil samples) were analyzed for organochlorine pesticides (OCP) following USEPA Method 8081. Based on the results of these samples, 152 discrete soil samples were also analyzed for OPCs (see Section 4.3).

The hand auger and slide hammer were decontaminated between sample collection by washing with a tri-sodium phosphate-based detergent and tap water, followed by successive rinses with tap water, and a final rinse in deionized water. Decontamination water was transferred into a 55-gallon Department of Transportation (DOT)-approved drum and stored on-Site pending offsite disposal. Soil borings were backfilled with the soil cuttings.

## 4. Soil Sample Results

Soil analytical results are summarized in Tables 1 and 2. Laboratory reports are included in Appendix A.

Soil results are summarized below.

### 4.1 LEAD RESULTS

Table 1 is a summary of lead results for the discrete soil samples. Detected lead concentrations ranged between 3.07 and 434 milligrams per kilogram (mg/kg). Lead was detected at a concentration greater than the DTSC modified screening level for residential soil of 80 mg/kg in 48 of the surface (0-0.5 feet bgs) soil samples. Therefore, the subsurface (2-2.5 feet bgs) samples for these 48 locations were analyzed for lead. The subsurface soil samples analyzed did not exhibit lead concentrations greater than 80 mg/kg. Therefore, it appears that lead concentrations greater than 80 mg/kg are limited to the upper two feet of soil based on the sampling and analysis performed.

Figure 3 shows the shallow (0-0.5 feet bgs) soil sample locations that exceed the lead screening level of 80 mg/kg.

### 4.2 ARSENIC RESULTS

Table 1 is a summary of arsenic results for the discrete soil samples. Detected arsenic concentrations ranged between 1.85 and 7.65 mg/kg. These concentrations are less than the DTSC Schools Program screening level of 12 mg/kg (DTSC, 2008). Based on these results, additional arsenic analysis was not performed.

### 4.3 ORGANOCHLORINE PESTICIDE RESULTS

Table 2 is a summary of OCP results for the composite soil samples. The detected concentrations of OCPs in the composite soil samples were compared to respective threshold screening values for composite samples in Table 8 of the DTSC Interim Guidance document (DTSC, 2006) to determine whether further analysis of discrete samples was required.

Composited OCP samples exceeding the DTSC screening values for the respective composite grouping were re-analyzed as discrete samples. Based on this comparison, the discrete samples were analyzed from 35 of the composite samples.

Table 1 is a summary of OCP results for the discrete soil samples. The following OCPs and maximum concentrations were detected in discrete soil samples:

- 4,4-DDD' = 520 mg/kg
- 4,4-DDE' = 1,400 mg/kg
- 4,4-DDT' = 1,200 mg/kg
- Chlordane = 11,000 mg/kg
- Dieldrin = 500 mg/kg
- Endrin Ketone = 5 mg/kg

- Heptachlor = 28 mg/kg
- Heptachlor epoxide = 1,300 mg/kg

The following OCPs exceed the DTSC modified screening level for residential soil: chlordane, dieldrin, and heptachlor epoxide. Fifty (50) discrete soil samples exceeded the DTSC modified screening levels for residential soil. Figure 3 shows the soil samples with OCP concentrations that exceed the DTSC modified screening levels for residential soil.

## **5. Preliminary Human Health Screening Risk Evaluation**

This section presents the results of a preliminary human health screening risk evaluation (HHSE) using the OCP concentrations measured in soil samples to estimate human health risk for resident at the Site. The HHSE was conducted using methodology presented in the “Preliminary Endangerment Assessment (PEA) Guidance Manual,” prepared by the California Department of Toxic Substance Control (DTSC) and dated January 1994 (revised October 2015; DTSC, 2015).

### **5.1 HAZARD IDENTIFICATION (CHEMICALS OF POTENTIAL CONCERN SELECTION)**

Chemicals of potential concern (COPCs) were identified as any OPC detected above the laboratory detection limit.

### **5.2 EXPOSURE ASSESSMENT**

The exposure assessment includes a description of the most sensitive receptors, their possible exposure pathways (i.e., how they may come into contact with the COPCs at the Site), derivation of exposure point concentrations, and estimation of chemical intakes by the receptors.

#### **5.2.1 Potential Receptors and Exposure Pathways**

The receptor with the greatest potential exposure –which is the future on-Site resident– was evaluated for possible exposures to Site-related OCP impacts. The following potentially complete exposure pathways were evaluated:

- Incidental ingestion of soil;
- Inhalation of fugitive dust and VOCs in ambient air; and
- Dermal contact with soil.

It was conservatively assumed that resident would be present at the Site for 24 hours per day, 350 days per year, for 26 years (6 years as a child, and 20 years as an adult).

#### **5.2.2 Exposure Point Concentrations**

The maximum detected OCPs in soil at the Site were used to estimate exposure point concentration concentrations (EPCs) for the on-Site resident.

#### **5.2.3 Estimation of Chemical Intakes and Exposure Concentrations**

COPC intakes and exposure concentrations were estimated using the methodology in the PEA Guidance Manual (DTSC, 2015).

### **5.3 TOXICITY ASSESSMENT**

The toxicity values used to identify the California toxicity values is based on the recommendations in the Preliminary Endangerment Assessment (PEA) Guidance Manual (DTSC, 2015).

## 5.4 SUMMARY OF RISK CHARACTERIZATION RESULTS

A summary of the estimated risk results is presented below; the associated risk calculations are presented in Appendix B.

The total non-cancer hazard for each receptor is presented as an estimated total hazard index (HI) and the total cancer risk for each receptor is presented as an estimated cumulative incremental lifetime cancer risk (ILCR).

### 5.4.1 Total Noncancer Hazard Index

Most environmental programs employ an HI of unity (i.e., 1) as an acceptable target for risk decisions. The most explicit directive comes from the federal Superfund program (USEPA, 1990), which is also Cal/EPA policy. This directive specifies an HI of 1 as the acceptable target for risk management decisions. This noncancer risk threshold was used in this HHSE for each receptor as the acceptable total HI to assess whether exposure to COPCs at the Site may pose an adverse noncarcinogenic effect.

### 5.4.2 Cumulative Incremental Lifetime Cancer Risk

A total ILCR of  $10^{-6}$  and  $10^{-4}$  corresponds to theoretical probability of 1 chance in 1 million to 1 chance in ten thousand, which is in addition to or excess of the background cancer risk. Potential risk estimates between  $10^{-6}$  and  $10^{-4}$  require risk management decisions based on site-specific land use/exposure scenarios and may or may not require remediation or mitigation (USEPA, 1990). It is generally accepted in the regulatory community that risk estimates equal to or less than  $10^{-6}$  do not require remediation or mitigation measures.

California Proposition 65 (1986, Safe Drinking Water and Toxic Enforcement Act of 1986, Proposition 65, Health and Safety Code Section 25249.5 et seq.) requires specific notification and warning for exposure to carcinogens above the “no significant risk level,” which is based on a  $10^{-5}$  excess lifetime cancer risk.

A cumulative ILCR threshold of  $10^{-6}$  was used in the HHSE to assess whether exposure to COPCs at the Site may pose an unacceptable cumulative ILCR for the residential receptors. These target cumulative ILCR values are within the range of ILCRs considered to be acceptable.

### 5.4.3 Summary of Risk Characterization Results

Based on the results of this HHSE and using DTSC default exposure assumptions for the future on-Site resident and maximum COPC concentrations in indoor air concentrations, the ILCR is  $6 \times 10^{-5}$  and the total HI is 2. The cumulative ILCR is greater than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is greater than the acceptable total HI of 1. Therefore, mitigation is necessary to protect the future on-Site resident.

## 6. Conclusions and Preliminary Recommendations

Based on our review of the soil samples results for the Site, we present the following preliminary conclusions and recommendations.

- DTSC modified screening levels for residential soil were exceeded in soil collected from 27 of the 30 houses sampled.
- Lead was detected at a concentration greater than the DTSC modified screening level for residential soil of 80 mg/kg in 48 of the surface (0-0.5 feet bgs) soil samples. The subsurface (2-2.5 feet bgs) soil samples analyzed did not exhibit lead concentrations greater than 80 mg/kg. Therefore, it appears that lead concentrations greater than 80 mg/kg are limited to the upper two feet of soil based on the sampling and analysis performed. Lead concentrations exceeded the DTSC modified screening level for residential soil at 25 of the 30 houses sampled.
- Detected arsenic concentrations are less than the DTSC Schools Program screening level of 12 mg/kg (DTSC, 2008).
- OCPs were detected in discrete soil samples at concentrations greater than the DTSC modified screening levels for residential soil in 39 of the discrete surface soil samples and 11 of the discrete subsurface samples. OCP concentrations exceeded the DTSC modified screening level for residential soil at 22 of the 30 houses sampled. Based on the results of this HHSE for the future on-Site resident, the cumulative ILCR is greater than the acceptable cumulative ILCR threshold of  $1 \times 10^{-6}$ , and the total HI is greater than the acceptable total HI of 1. Therefore, mitigation is necessary to protect the future on-Site resident.
- We recommend additional soil sampling and analysis prior to or during demolition and/or grading activities at all structures located on the property to identify the lateral extent of lead concentrations in soil and the lateral and vertical extent of OCP concentrations in soil greater than the DTSC modified screening levels and to ensure proper removal of the soil that exceeds these levels.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/28/17. They were assigned to Work Order 17-03-2035.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Return to Contents

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDS or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

8	Chain-of-Custody/Sample Receipt Form. . . . .	61

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/28/17. They were assigned to Work Order 17-03-2035.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Sample Analysis Summary Report

Work Order: 17-03-2035

Page 1 of 1

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 6010B	EPA 3050B	935	ICP 7300	1
EPA 8081A	EPA 3545	669	GC 41	1
EPA 8081A	EPA 3545	944	GC 41	1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## Virendra Patel

---

**From:** Raithel, Mathew <MRaithel@haleyaldrich.com>  
**Sent:** Wednesday, April 05, 2017 1:33 PM  
**To:** Virendra Patel; Erick Ovalle  
**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/29/17. They were assigned to Work Order 17-03-2146.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Glossary of Terms and Qualifiers

Work Order: 17-03-2146

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## Virendra Patel

**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/29/17. They were assigned to Work Order 17-03-2146.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Sample Analysis Summary Report

Work Order: 17-03-2146

Page 1 of 1

<u>Method</u>	<u>Extraction</u>	<u>Chemist ID</u>	<u>Instrument</u>	<u>Analytical Location</u>
EPA 6010B	EPA 3050B	935	ICP 7300	1
EPA 8081A	EPA 3545	669	GC 41	1
EPA 8081A	EPA 3545	669	GC 44	1
EPA 8081A	EPA 3545	669	GC 51	1
EPA 8081A	EPA 3545	944	GC 41	1
EPA 8081A	EPA 3545	944	GC 51	1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## Virendra Patel

---

**From:** Raithel, Mathew <MRaithel@haleyaldrich.com>  
**Sent:** Wednesday, April 05, 2017 1:33 PM  
**To:** Virendra Patel; Erick Ovalle  
**Subject:** UC Riverside project

Virendra/Erick,

We will need J flags reported for the 8081 analyses for the UC Riverside project. I just realized that this was not requested on the COCs. Below are the work order numbers:

17-03-2035

17-03-2146

17-03-2252

17-03-2356

Thanks,  
Matt

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 03/30/17. They were assigned to Work Order 17-03-2252.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Detections Summary

Client: Haley & Aldrich, Inc.  
3187 Red Hill Avenue, Suite 155  
Costa Mesa, CA 92626-3453

Work Order: 17-03-2252  
Project Name: UC Riverside North District / 128685-006 2.0  
Received: 03/30/17

Attn: Colleen Canfield
