## Test Report: Asbestos Analysis of Bulk Material via EPA 600/R-93/116. Quantitation using the 1,000 Point Count Procedure

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
131 331815990-0001	3370 Idaho - Level 1 - Exterior West - Stucco Skim Coat	Beige Non-Fibrous Heterogeneous		99.7% Non-fibrous (Other)	0.3% Chrysotile

Analyst(s)  
Sotheyry Son (1)

Michael DeCavallas, Laboratory Manager  
or other approved signatory

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits. The limit of detection as stated in the method is 0.1%. EMSL Analytical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government. EMSL Analytical Inc. bears no responsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis. The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

Initial report from: 08/14/2018 17:45:43

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
12VFT 1 - 01-Floor Tile 331815187-0001	Living Room SW - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 1 - 01-Mastic 331815187-0001A	Living Room SW - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 1 - 02-Floor Tile 331815187-0002	Living Room NE - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 1 - 02-Mastic 331815187-0002A	Living Room NE - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 1 - 03-Floor Tile 331815187-0003	Hallway East - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 1 - 03-Mastic 331815187-0003A	Hallway East - Beige 12" Beige Floor Tile w/ Gray Streaks & Yellow mastic ( Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 2 - 04-Floor Tile 331815187-0004	Bedroom 1 NW - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Brown Non-Fibrous Homogeneous	2% Cellulose	98% Non-fibrous (Other)	None Detected
12VFT 2 - 04-Mastic 331815187-0004A	Bedroom 1 NW - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 2 - 05-Floor Tile 331815187-0005	Bedroom 2 SW - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Brown Non-Fibrous Homogeneous	2% Cellulose	98% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
12VFT 2 - 05-Mastic 331815187-0005A	Bedroom 2 SW - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 2 - 06-Floor Tile 331815187-0006	Bedroom 2 NE - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Brown Non-Fibrous Homogeneous	2% Cellulose	98% Non-fibrous (Other)	None Detected
12VFT 2 - 06-Mastic 331815187-0006A	Bedroom 2 NE - Brown 12" Brown Floor Tile w/ White & Brown Streaks w/ Yellow Mastic (Top Layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 3 - 07-Floor Tile 331815187-0007	Bathroom 1 NW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Brown Non-Fibrous Homogeneous		98% Non-fibrous (Other)	2% Chrysotile
12VFT 3 - 07-Mastic 331815187-0007A	Bathroom 1 NW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 3 - 07-Felt 331815187-0007B	Bathroom 1 NW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Black Fibrous Homogeneous	45% Cellulose	55% Non-fibrous (Other)	None Detected
12VFT 3 - 08-Floor Tile 331815187-0008	Bedroom 2 SW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Brown Non-Fibrous Homogeneous		98% Non-fibrous (Other)	2% Chrysotile
12VFT 3 - 08-Mastic 331815187-0008A	Bedroom 2 SW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
12VFT 3 - 08-Felt 331815187-0008B	Bedroom 2 SW - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Black Fibrous Homogeneous	50% Cellulose	50% Non-fibrous (Other)	None Detected
12VFT 3 - 09-Floor Tile 331815187-0009	Bedroom 2 NE - Dark Brown 12" w/ Brown Streaks & Black Mastic & Moisture Barrier Paper ( Bottom Layer)	Brown Non-Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
124-Sheet Flooring 331815365-0065A	3334 Idaho - Level 1 - Kitchen - NE - Sheet flooring w/ brown flower pattern w/ black mastic ( bottom layer)	Gray/Beige Fibrous Heterogeneous		70% Non-fibrous (Other)	30% Chrysotile
124-Mastic 2 331815365-0065B	3334 Idaho - Level 1 - Kitchen - NE - Sheet flooring w/ brown flower pattern w/ black mastic ( bottom layer)	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
125 331815365-0066	3334 Idaho - Level 1 - Kitchen - NW - Smooth drywall	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
126-Baseboard 331815365-0067	3334 Idaho - Level 1 - Bathroom NE - 4" black baseboard w/ beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
126-Mastic 331815365-0067A	3334 Idaho - Level 1 - Bathroom NE - 4" black baseboard w/ beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
127-Baseboard 331815365-0068	3334 Idaho - Level 1 - Bathroom - E - 4" black baseboard w/ beige mastic <i>Mastic not preset in sample.</i>	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
128-Mastic 331815365-0069	3334 Idaho - Level 1 - Bathroom - SE - 4" black baseboard w/ beige mastic <i>Baseboard not found in sample. Sample contained mastic only.</i>	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
129 331815365-0070	3370 Idaho - Level 1 - Exterior SW - Stucco Skim Coat	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
130 331815365-0071	3370 Idaho - Level 1 - Exterior SE - Stucco Skim Coat	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
131 331815365-0072	3370 Idaho - Level 1 - Exterior West - Stucco Skim Coat <i>Inseparable paint / coating layer included in analysis</i>	Beige Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	<1% Chrysotile
132-Sheet Flooring 331815365-0073	3370 Idaho - Level 1 - Kitchen - NE - Sheet flooring w/ square & triangle pattern w/ yellow mastic (1st layer)	Gray Fibrous Homogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
132-Mastic 331815365-0073A	3370 Idaho - Level 1 - Kitchen - NE - Sheet flooring w/ square & triangle pattern w/ yellow mastic (1st layer)	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
161-Roof Shingle <i>331815365-0102</i>	3370 Idaho - Roof - SE - Roof shingle & vapor barrier	Gray/Black Fibrous Heterogeneous	8% Glass	92% Non-fibrous (Other)	None Detected
161-Vapor Barrier Paper <i>331815365-0102A</i>	3370 Idaho - Roof - SE - Roof shingle & vapor barrier	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
162-Roof Shingle <i>331815365-0103</i>	3370 Idaho - Roof - East - Roof shingle & vapor barrier	Gray/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
162-Vapor Barrier Paper <i>331815365-0103A</i>	3370 Idaho - Roof - East - Roof shingle & vapor barrier	Black Fibrous Homogeneous	25% Cellulose	75% Non-fibrous (Other)	None Detected
163-Shingle <i>331815365-0104</i>	3370 Idaho - Roof - NE - Roof shingle & vapor barrier	Brown/Black Fibrous Heterogeneous	5% Glass	95% Non-fibrous (Other)	None Detected
163-Vapor Barrier Paper <i>331815365-0104A</i>	3370 Idaho - Roof - NE - Roof shingle & vapor barrier	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
164 <i>331815365-0105</i>	3370 Idaho - Roof - East - Roof penetration mastic	Gray/Black Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
165 <i>331815365-0106</i>	3370 Idaho - Roof - East - Roof penetration mastic	Gray/Black Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
166 <i>331815365-0107</i>	3370 Idaho - Roof - East - Roof penetration mastic	Gray/Black Fibrous Homogeneous		95% Non-fibrous (Other)	5% Chrysotile
167-Skim Coat <i>331815365-0108</i>	3429 Florida - Level 1 - Exterior East - Stucco Skim coat	Brown/Tan Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
167-Stucco <i>331815365-0108A</i>	3429 Florida - Level 1 - Exterior East - Stucco Skim coat <i>Inseparable paint / coating layer included in analysis</i>	Gray Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
168-Skim Coat <i>331815365-0109</i>	3429 Florida - Level 1 - Exterior North - Stucco Skim coat	Brown/Tan Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
168-Stucco <i>331815365-0109A</i>	3429 Florida - Level 1 - Exterior North - Stucco Skim coat <i>Inseparable paint / coating layer included in analysis</i>	Gray Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
169 <i>331815365-0110</i>	3429 Florida - Level 1 - Exterior West - Stucco Skim coat <i>Inseparable paint / coating layer included in analysis</i>	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
170-Shingle 1 <i>331815365-0111</i>	3429 Florida - Roof - SE - Roofing shingle & vapor barrier	Red/Black Fibrous Heterogeneous	15% Glass	85% Non-fibrous (Other)	None Detected
170-Shingle 2 <i>331815365-0111A</i>	3429 Florida - Roof - SE - Roofing shingle & vapor barrier	Brown/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
170-Vapor Barrier <i>331815365-0111B</i>	3429 Florida - Roof - SE - Roofing shingle & vapor barrier	Black Fibrous Homogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
171-Shingle 1 <i>331815365-0112</i>	3429 Florida - Roof - SE - Roofing shingle & vapor barrier	Red/Black Fibrous Heterogeneous	15% Glass	85% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
194-Sheet Flooring 331815365-0135A	3429 Florida - Level 1 - Bath room - NW - Pebble pattern sheet flooring w/ yellow mastic (Second layer)	Gray/White/Various Fibrous Heterogeneous		60% Non-fibrous (Other)	40% Chrysotile
194-Mastic 2 331815365-0135B	3429 Florida - Level 1 - Bath room - NW - Pebble pattern sheet flooring w/ yellow mastic (Second layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
195-Sheet Flooring 331815365-0136	3429 Florida - Level 1 - Bath room - East - Pebble pattern sheet flooring w/ yellow mastic (Second layer)	Yellow Fibrous Heterogeneous		70% Non-fibrous (Other)	30% Chrysotile
195-Mastic 331815365-0136A	3429 Florida - Level 1 - Bath room - East - Pebble pattern sheet flooring w/ yellow mastic (Second layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
223-Sheet Flooring 331815863-0028	Unit 3367 Utah - Level 1 - Kitchen - SE - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Gray/Various/Pink Non-Fibrous Homogeneous	4% Cellulose	96% Non-fibrous (Other)	None Detected
223-Vapor Barrier 331815863-0028A	Unit 3367 Utah - Level 1 - Kitchen - SE - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Brown/Black/Green Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
223-Mastic 331815863-0028B	Unit 3367 Utah - Level 1 - Kitchen - SE - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
224-Sheet Flooring 331815863-0029	Unit 3367 Utah - Level 1 - Kitchen - NW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Various/Beige Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
224-Vapor Barrier 331815863-0029A	Unit 3367 Utah - Level 1 - Kitchen - NW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Brown/Green Fibrous Homogeneous	80% Cellulose	20% Non-fibrous (Other)	None Detected
224-Mastic 331815863-0029B	Unit 3367 Utah - Level 1 - Kitchen - NW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (4th layer)	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
225-Roof Shingle 1 331815863-0030	Unit 3367 Utah - Roof - Roof - NW - Roofing shingles & vapor barrier	Gray/Black Fibrous Heterogeneous	15% Glass	85% Non-fibrous (Other)	None Detected
225-Roof Shingle 2 331815863-0030A	Unit 3367 Utah - Roof - Roof - NW - Roofing shingles & vapor barrier	Gray/Black Fibrous Heterogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
225-Vapor Barrier 331815863-0030B	Unit 3367 Utah - Roof - Roof - NW - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
226-Roof Shingle 1 331815863-0031	Unit 3367 Utah - Roof - Roof - West - Roofing shingles & vapor barrier	Gray/Black Fibrous Heterogeneous	15% Glass	85% Non-fibrous (Other)	None Detected
226-Roof Shingle 2 331815863-0031A	Unit 3367 Utah - Roof - Roof - West - Roofing shingles & vapor barrier	Gray/Black Fibrous Heterogeneous	4% Cellulose	96% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
226-Vapor Barrier 331815863-0031B	Unit 3367 Utah - Roof - Roof - West - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	25% Cellulose	75% Non-fibrous (Other)	None Detected
227-Roof Shingle 1 331815863-0032	Unit 3367 Utah - Roof - Roof - SW - Roofing shingles & vapor barrier	Brown/Gray/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
227-Roof Shingle 2 331815863-0032A	Unit 3367 Utah - Roof - Roof - SW - Roofing shingles & vapor barrier	Brown/Black Fibrous Heterogeneous	5% Glass	95% Non-fibrous (Other)	None Detected
227-Vapor Barrier 331815863-0032B	Unit 3367 Utah - Roof - Roof - SW - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
228 331815863-0033	Unit 3367 Utah - Roof - Roof - West - Roof penetration mastic	Black Non-Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
229 331815863-0034	Unit 3367 Utah - Roof - Roof - West - Roof penetration mastic	Black Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
230 331815863-0035	Unit 3367 Utah - Roof - Roof - West - Roof penetration mastic	Gray/Black Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
231-Joint Compound 331815863-0036	Unit 3367 Utah - Level 1 - Kitchen - SW - Smooth drywall	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
231-Drywall 331815863-0036A	Unit 3367 Utah - Level 1 - Kitchen - SW - Smooth drywall	Brown/White Fibrous Heterogeneous	8% Cellulose	70% Gypsum 22% Non-fibrous (Other)	None Detected
232-Skim Coat 331815863-0037	Unit 3341 Utah - Level 1 - Living room - North - Plaster	Green Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
232-Plaster 331815863-0037A	Unit 3341 Utah - Level 1 - Living room - North - Plaster	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
232-Drywall 331815863-0037B	Unit 3341 Utah - Level 1 - Living room - North - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
233-Skim Coat 331815863-0038	Unit 3341 Utah - Level 1 - Kitchen - SE - Plaster	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
233-Plaster 331815863-0038A	Unit 3341 Utah - Level 1 - Kitchen - SE - Plaster	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
233-Drywall 331815863-0038B	Unit 3341 Utah - Level 1 - Kitchen - SE - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
234-Skim Coat 331815863-0039	Unit 3341 Utah - Level 1 - Bedroom 1 - South - Plaster	Green Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
234-Plaster 331815863-0039A	Unit 3341 Utah - Level 1 - Bedroom 1 - South - Plaster	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
234-Drywall 331815863-0039B	Unit 3341 Utah - Level 1 - Bedroom 1 - South - Plaster	Brown/White Fibrous Heterogeneous	8% Cellulose	92% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
254-Vapor Barrier 331815863-0059C	Unit 3341 Utah - Roof - West - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
255-Shingle 331815863-0060	Unit 3341 Utah - Roof - West - Roofing shingles & vapor barrier	Gray/Black/Orange Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
255-Vapor Barrier 331815863-0060A	Unit 3341 Utah - Roof - West - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
256 331815863-0061	Unit 3341 Utah - Roof - West - Roof penetration mastic	Gray/Black Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
257 331815863-0062	Unit 3341 Utah - Roof - West - Roof penetration mastic	Gray/Black Non-Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
258 331815863-0063	Unit 3341 Utah - Roof - West - Roof penetration mastic	Gray/Black Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
259-Skim Coat 331815863-0064	Unit 3341 Utah - Level 1 - Exterior NE - Stucco- Skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
259-Stucco 331815863-0064A	Unit 3341 Utah - Level 1 - Exterior NE - Stucco- Skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
260-Skim Coat 331815863-0065	Unit 3341 Utah - Level 1 - Exterior NW - Stucco- Skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
260-Stucco 331815863-0065A	Unit 3341 Utah - Level 1 - Exterior NW - Stucco- Skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
261-Skim Coat 331815863-0066	Unit 3341 Utah - Level 1 - Exterior SW - Stucco- Skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
291-Mastic 2 331815863-0096B	Unit 3308 Utah - Level 1 - Bedroom - West - 12" Floor tile w/ brown streaks w/ black mastic & vapor barrier (bottom layer)	Black Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	<1% Chrysotile
<i>Result includes a small amount of inseparable attached floor tile material</i>					
291-Vapor Barrier 331815863-0096C	Unit 3308 Utah - Level 1 - Bedroom - West - 12" Floor tile w/ brown streaks w/ black mastic & vapor barrier (bottom layer)	Black Fibrous Homogeneous	50% Cellulose	50% Non-fibrous (Other)	None Detected
291-Mastic 3 331815863-0096D	Unit 3308 Utah - Level 1 - Bedroom - West - 12" Floor tile w/ brown streaks w/ black mastic & vapor barrier (bottom layer)	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
292-Shingle 1 331815863-0097	Unit 3308 Utah - Roof - North East - Roofing shingles & vapor barrier	Brown/Black/Orange Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
292-Shingle 2 331815863-0097A	Unit 3308 Utah - Roof - North East - Roofing shingles & vapor barrier	Brown/Black Fibrous Heterogeneous	8% Glass	92% Non-fibrous (Other)	None Detected
292-Vapor Barrier 331815863-0097B	Unit 3308 Utah - Roof - North East - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
293-Shingle 1 331815863-0098	Unit 3308 Utah - Roof - East - Roofing shingles & vapor barrier	Brown/Black/Orange Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
293-Shingle 2 331815863-0098A	Unit 3308 Utah - Roof - East - Roofing shingles & vapor barrier	Brown/Black Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
293-Vapor Barrier 331815863-0098B	Unit 3308 Utah - Roof - East - Roofing shingles & vapor barrier	Black Fibrous Homogeneous	25% Cellulose	75% Non-fibrous (Other)	None Detected
294-Shingle 331815863-0099	Unit 3308 Utah - Roof - East - Roofing shingles & vapor barrier	Brown/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
<i>Sample did not contain vapor barrier.</i>					
294-Roofing 331815863-0099A	Unit 3308 Utah - Roof - East - Roofing shingles & vapor barrier	Black Fibrous Heterogeneous	12% Cellulose	88% Non-fibrous (Other)	None Detected
295 331815863-0100	Unit 3308 Utah - Roof - East - Roof penetration mastic	Gray/Black Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
296 331815863-0101	Unit 3308 Utah - Roof - East - Roof penetration mastic	Gray/Black Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
326-Vapor Barrier 331815863-0131A	Unit 3384 Utah - Level 1 - Kitchen - SW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (bottom layer)	Brown/Green Fibrous Homogeneous	90% Cellulose	10% Non-fibrous (Other)	None Detected
327-Sheet Flooring 331815863-0132	Unit 3384 Utah - Level 1 - Kitchen - NW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (bottom layer)	Various/Beige Fibrous Homogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
<i>Black mastic not present in sample</i>					
327-Vapor Barrier 331815863-0132A	Unit 3384 Utah - Level 1 - Kitchen - NW - Sheet flooring w/ blue & pink specs w/ black mastic & vapor barrier (bottom layer)	Brown/Green Fibrous Homogeneous	90% Cellulose	10% Non-fibrous (Other)	None Detected
328-Sheet Flooring 331815863-0133	Unit 3384 Utah - Level 1 - Bathroom S - Sheet flooring w/ brown flower pattern (bottom layer)	Brown/Gray/Beige Fibrous Heterogeneous		70% Non-fibrous (Other)	30% Chrysotile
328-Mastic 331815863-0133A	Unit 3384 Utah - Level 1 - Bathroom S - Sheet flooring w/ brown flower pattern (bottom layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
329-Sheet Flooring 331815863-0134	Unit 3384 Utah - Level 1 - Bathroom SW - Sheet flooring w/ brown flower pattern (bottom layer)	Brown/Gray/Beige Fibrous Heterogeneous		70% Non-fibrous (Other)	30% Chrysotile
329-Mastic 331815863-0134A	Unit 3384 Utah - Level 1 - Bathroom SW - Sheet flooring w/ brown flower pattern (bottom layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
330-Sheet Flooring 331815863-0135	Unit 3384 Utah - Level 1 - Bathroom N - Sheet flooring w/ brown flower pattern (bottom layer)	Brown/Gray/Beige Fibrous Heterogeneous		70% Non-fibrous (Other)	30% Chrysotile
330-Mastic 331815863-0135A	Unit 3384 Utah - Level 1 - Bathroom N - Sheet flooring w/ brown flower pattern (bottom layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
331-Skim Coat 331815863-0136	Unit 3350 Utah - Level 1 - Exterior - NW - Stucco - skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
331-Stucco 331815863-0136A	Unit 3350 Utah - Level 1 - Exterior - NW - Stucco - skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
439-Floor Tile 331816310-0001	873 Grape - Level 1 - Living room S - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
439-Mastic 331816310-0001A	873 Grape - Level 1 - Living room S - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
440-Floor Tile 331816310-0002	873 Grape - Level 1 - Bedroom 1 S - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
440-Mastic 331816310-0002A	873 Grape - Level 1 - Bedroom 1 S - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Black/Yellow Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
440-Floor Tile 2 331816310-0002B	873 Grape - Level 1 - Bedroom 1 S - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Brown Non-Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
441-Floor Tile 331816310-0003	873 Grape - Level 1 - Bedroom 2 - W - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
441-Mastic 331816310-0003A	873 Grape - Level 1 - Bedroom 2 - W - 12' Floor tile w/ white & brown streaks w/ yellow mastic (top layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
442-Mastic 1 331816310-0004	873 Grape - Level 1 - Living room S - 9" Floor w/ brown streaks & black mastic w/ vapor barrier (bottom layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
515-Vapor Barrier 331816310-0077B	861 Cherry - Level 1 - Bedroom 2 - NE - 9" Floor tile w/ brown streaks w/ black mastic & vapor barrier (bottom layer)	Black Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
516-Sheet Flooring 331816310-0078	861 Cherry - Level 1 - Bathroom - N - Sheet flooring w/ 6" squares w/ yellow mastic	Gray/White Fibrous Heterogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
516-Mastic 331816310-0078A	861 Cherry - Level 1 - Bathroom - N - Sheet flooring w/ 6" squares w/ yellow mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
517-Sheet Flooring 331816310-0079	861 Cherry - Level 1 - Bathroom - N - Sheet flooring w/ 6" squares w/ yellow mastic	Gray/White Fibrous Heterogeneous	35% Cellulose	65% Non-fibrous (Other)	None Detected
517-Mastic 331816310-0079A	861 Cherry - Level 1 - Bathroom - N - Sheet flooring w/ 6" squares w/ yellow mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
518-Sheet Flooring 331816310-0080	861 Cherry - Level 1 - Bathroom - S - Sheet flooring w/ 6" squares w/ yellow mastic	White Fibrous Homogeneous	20% Cellulose 5% Glass	75% Non-fibrous (Other)	None Detected
518-Mastic 331816310-0080A	861 Cherry - Level 1 - Bathroom - S - Sheet flooring w/ 6" squares w/ yellow mastic	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
519-Mastic 331816310-0081	861 Cherry - Level 1 - Kitchen - NE - 4" black baseboard w/ white mastic	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
<i>Baseboard not present in sample.</i>					
520-Mastic 331816310-0082	861 Cherry - Level 1 - Kitchen - E - 4" black baseboard w/ white mastic	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
<i>Baseboard not present in sample.</i>					
521 331816310-0083	861 Cherry - Level 1 - Kitchen - SE - 4" black baseboard w/ white mastic	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
<i>Baseboard not found.</i>					
522-Texture 331816310-0084	861 Cherry - Level 1 - Exterior SW - Stucco skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
522-Skim Coat 331816310-0084A	861 Cherry - Level 1 - Exterior SW - Stucco skim coat	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
522-Stucco 331816310-0084B	861 Cherry - Level 1 - Exterior SW - Stucco skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
523-Texture 331816310-0085	861 Cherry - Level 1 - Exterior SE - Stucco skim coat	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
548-Plaster 331816310-0110A	3419 Kentucky - Level 1 - Bathroom SW - Plaster w/ heavy texture ceiling	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
548-Drywall 331816310-0110B	3419 Kentucky - Level 1 - Bathroom SW - Plaster w/ heavy texture ceiling	Brown/White Fibrous Heterogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
549-Skim Coat 331816310-0111	3419 Kentucky - Level 1 - Exterior -NE - Stucco skim coat	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
549- Stucco 331816310-0111A	3419 Kentucky - Level 1 - Exterior -NE - Stucco skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
550-Skim Coat 331816310-0112	3419 Kentucky - Level 1 - Exterior -SW - Stucco skim coat	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
550- Stucco 331816310-0112A	3419 Kentucky - Level 1 - Exterior -SW - Stucco skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
551-Skim Coat 331816310-0113	3419 Kentucky - Level 1 - Exterior -SE - Stucco skim coat	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
551-Stucco 331816310-0113A	3419 Kentucky - Level 1 - Exterior -SE - Stucco skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
552 331816310-0114 <i>Texture not found.</i>	3419 Kentucky - Level 1 - Kitchen - Drywall w/ heavy texture	Brown/White Fibrous Heterogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
553-Floor Tile 1 331816310-0115	3419 Kentucky - Level 1 - Living room - S - 9" floor tile w/ brown streaks + black mastic + vapor barrier (bottom layer)	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
553-Mastic 1 331816310-0115A	3419 Kentucky - Level 1 - Living room - S - 9" floor tile w/ brown streaks + black mastic + vapor barrier (bottom layer)	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
553-Floor Tile 2 331816310-0115B	3419 Kentucky - Level 1 - Living room - S - 9" floor tile w/ brown streaks + black mastic + vapor barrier (bottom layer)	Brown Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
553-Mastic 2 331816310-0115C	3419 Kentucky - Level 1 - Living room - S - 9" floor tile w/ brown streaks + black mastic + vapor barrier (bottom layer)	Black Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	<1% Chrysotile

Result includes a small amount of inseparable attached material

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
580 331816310-0142	3434 Kentucky - Roof - E - Penetration mastic	Gray/Black Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
581 331816310-0143	3434 Kentucky - Roof - E - Penetration mastic	Gray/Black Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
582 331816310-0144	3434 Kentucky - Roof - E - Penetration mastic	Gray/Black Fibrous Homogeneous		97% Non-fibrous (Other)	3% Chrysotile
583-Plaster 331816310-0145 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Living room SW - Plaster	Gray Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
583-Drywall 331816310-0145A	3434 Kentucky - Level 1 - Living room SW - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
584-Plaster 331816310-0146 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Kitchen N - Plaster	Gray Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
584-Drywall 331816310-0146A	3434 Kentucky - Level 1 - Kitchen N - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
585-Plaster 331816310-0147 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Hall NW - Plaster	Gray Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
585-Drywall 331816310-0147A	3434 Kentucky - Level 1 - Hall NW - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected
586-Plaster 331816310-0148 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Bedroom 2 E - Plaster	Gray/Tan/White Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
586-Drywall 331816310-0148A	3434 Kentucky - Level 1 - Bedroom 2 E - Plaster	Brown/White Fibrous Heterogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
587-Plaster 331816310-0149 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Bathroom SE - Plaster ceiling	Gray/White/Green Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
587-Drywall 331816310-0149A	3434 Kentucky - Level 1 - Bathroom SE - Plaster ceiling	Brown/White Fibrous Heterogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
588 331816310-0150 <i>Inseparable paint / coating layer included in analysis</i>	3434 Kentucky - Level 1 - Kitchen SW - Drywall smooth	Brown/White Fibrous Heterogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
589-Skim Coat 331816310-0151	3434 Kentucky - Level 1 - Exterior NW - Stucco skim coat	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
589-Stucco 331816310-0151A	3434 Kentucky - Level 1 - Exterior NW - Stucco skim coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
590-Skim Coat 331816310-0152	3434 Kentucky - Level 1 - Exterior NE - Stucco skim coat	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
698-Drywall 331816743-0005B	Unit 860 Grape Level 1 Bathroom South - Plaster Heavy Texture Ceiling	Brown/White Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
699 331816743-0006	Unit 860 Grape Level 1 Exterior NW - Stucco Skim Coat	Tan/White Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
700-Skim Coat 1 331816743-0007	Unit 860 Grape Level 1 Exterior SW - Stucco Skim Coat	Tan/White Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
700-Skim Coat 2 331816743-0007A	Unit 860 Grape Level 1 Exterior SW - Stucco Skim Coat	White Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
700-Stucco 331816743-0007B	Unit 860 Grape Level 1 Exterior SW - Stucco Skim Coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
701-Skim Coat 331816743-0008	Unit 860 Grape Level 1 Exterior SE - Stucco Skim Coat	Tan/White Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
701-Stucco 331816743-0008A	Unit 860 Grape Level 1 Exterior SE - Stucco Skim Coat	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
702-Shingle 331816743-0009	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Gray/White/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
702-Vapor Barrier 331816743-0009A	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Black Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
703-Shingle 331816743-0010	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Gray/White/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
703-Vapor Barrier 331816743-0010A	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Black Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
704-Shingle 331816743-0011	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Gray/White/Black Fibrous Heterogeneous	10% Glass	90% Non-fibrous (Other)	None Detected
704-Vapor Barrier 331816743-0011A	Unit 860 Grape Roof South - Roofing Shingles + Vapor Barrier	Black Fibrous Homogeneous	60% Cellulose	40% Non-fibrous (Other)	None Detected
705 331816743-0012	Unit 860 Grape Level 1 Kitchen East - 4" Black Baseboard w/ Beige Mastic  <i>Baseboard not found.</i>	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
706 331816743-0013	Unit 860 Grape Level 1 SE - 4" Black Baseboard w/ Beige Mastic  <i>Baseboard not found.</i>	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
750-Sheet Flooring 331816743-0057	Unit 3318 Utah Level 1 Bathroom West - Sheet Flooring Beige & Brown Pebble Pattern w/ Yellow Mastic (2nd Layer)	Beige Fibrous Homogeneous		75% Non-fibrous (Other)	25% Chrysotile
750-Mastic 331816743-0057A	Unit 3318 Utah Level 1 Bathroom West - Sheet Flooring Beige & Brown Pebble Pattern w/ Yellow Mastic (2nd Layer)	Brown/Yellow Fibrous Heterogeneous		98% Non-fibrous (Other)	2% Chrysotile
<i>Result includes a small amount of inseparable attached sheet flooring material</i>					
751-Floor Tile 331816743-0058	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
751-Vapor Barrier 331816743-0058A	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Brown Fibrous Homogeneous	40% Cellulose 10% Synthetic	50% Non-fibrous (Other)	None Detected
752-Floor Tile 331816743-0059	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Tan Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
752-Vapor Barrier 331816743-0059A	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Brown Fibrous Homogeneous	40% Cellulose 10% Synthetic	50% Non-fibrous (Other)	None Detected
753-Sheet Flooring 331816743-0060	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Brown Fibrous Homogeneous		75% Non-fibrous (Other)	25% Chrysotile
753-Floor Tile 331816743-0060A	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Beige Fibrous Homogeneous	15% Cellulose	85% Non-fibrous (Other)	None Detected
753-Mastic 331816743-0060B	Unit 3318 Utah Level 1 Bathroom West - 9" Floor Tile w/ Brown Specs w/ Blk Mastic + Vapor Barrier (Bottom Layer)	Brown/Yellow Fibrous Heterogeneous	5% Cellulose <1% Synthetic	95% Non-fibrous (Other)	None Detected
<i>Result includes a small amount of inseparable attached vapor barrier material</i>

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Seattle, WA NVLAP Lab Code 200613, CA 2733

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1000-Plaster 331815085-0001	Unit 851- Level 1st- N Center living room - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1000-Button Board 331815085-0001A	Unit 851- Level 1st- N Center living room - Plaster w/ button board	White Fibrous Homogeneous	6% Cellulose	94% Non-fibrous (Other)	None Detected
1001-Plaster 331815085-0002	Unit 851- Level 1st- NE corner of bedroom 2 - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1001-Button Board 331815085-0002A	Unit 851- Level 1st- NE corner of bedroom 2 - Plaster w/ button board	White Fibrous Homogeneous	6% Cellulose	94% Non-fibrous (Other)	None Detected
1002-Plaster 331815085-0003	Unit 851- Level 1st- W ceiling of bedroom 1 - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1002-Button Board 331815085-0003A	Unit 851- Level 1st- W ceiling of bedroom 1 - Plaster w/ button board	Brown/White Fibrous Heterogeneous	6% Cellulose	94% Non-fibrous (Other)	None Detected
1003-Plaster 331815085-0004	Unit 849- Level 1st- S center - living room - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1003-Button Board 331815085-0004A	Unit 849- Level 1st- S center - living room - Plaster w/ button board	White Fibrous Homogeneous	6% Cellulose	94% Non-fibrous (Other)	None Detected
1004-Plaster 331815085-0005	Unit 849- Level 1st- W center - bath room - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1004-Buttonboard 331815085-0005A	Unit 849- Level 1st- W center - bath room - Plaster w/ button board	Brown/White Fibrous Heterogeneous	8% Cellulose	92% Non-fibrous (Other)	None Detected
1005-Plaster 331815085-0006	Unit 849- Level 1st- S center - bedroom 2 - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1005-Buttonboard 331815085-0006A	Unit 849- Level 1st- S center - bedroom 2 - Plaster w/ button board	Brown/White Fibrous Heterogeneous	8% Cellulose	92% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1006-Plaster 331815085-0007	Unit 851- Level 1st- NE corner of bathroom - Plaster w/ button board	Gray Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1006-Buttonboard 331815085-0007A	Unit 851- Level 1st- NE corner of bathroom - Plaster w/ button board	Brown/White Fibrous Heterogeneous	8% Cellulose	92% Non-fibrous (Other)	None Detected
1007-Joint Compound 331815085-0008	Unit 851- Level 1st- SE corner of kitchen - Smooth drywall w/ joint compound	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1007-Drywall 331815085-0008A	Unit 851- Level 1st- SE corner of kitchen - Smooth drywall w/ joint compound	Brown/White Fibrous Heterogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
1008-Joint Compound 331815085-0009	Unit 849- Level 1st- SW corner of kitchen - Smooth drywall w/ joint compound	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1008-Drywall 331815085-0009A	Unit 849- Level 1st- SW corner of kitchen - Smooth drywall w/ joint compound	Brown/White Fibrous Heterogeneous	8% Cellulose	70% Gypsum 22% Non-fibrous (Other)	None Detected
1009-Vinyl Floor Tile 331815085-0010	Unit 851- Level 1st- Top layer- Living room - 12 " Beige w/ specs tile. Beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1009-Mastic 331815085-0010A	Unit 851- Level 1st- Top layer- Living room - 12 " Beige w/ specs tile. Beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1010-Vinyl Floor Tile 331815085-0011	Unit 851- Level 1st- bottom - Living room - 12" brown tile, black vapor paper,. Black Mastic	Beige Non-Fibrous Homogeneous		96% Non-fibrous (Other)	4% Chrysotile
1010-Mastic 1 331815085-0011A	Unit 851- Level 1st- bottom - Living room - 12" brown tile, black vapor paper,. Black Mastic	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1010-Mastic 2 331815085-0011B	Unit 851- Level 1st- bottom - Living room - 12" brown tile, black vapor paper,. Black Mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1010-Vapor Paper 331815085-0011C	Unit 851- Level 1st- bottom - Living room - 12" brown tile, black vapor paper,. Black Mastic	Black Fibrous Homogeneous	45% Cellulose	55% Non-fibrous (Other)	None Detected
1011-Vinyl Floor Tile 331815085-0012	Unit 851- Level 1st- Bedroom #2 top - 12 " Beige w/ specs tile. Beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1032-Vinyl Sheet Flooring 331815085-0033	Unit 849- Level 1st-Kitchen (4) - Marbel sheet flooring w/ mastic	Gray/Tan/White Fibrous Heterogeneous	20% Cellulose 5% Synthetic	75% Non-fibrous (Other)	None Detected
1032-Mastic 1 331815085-0033A	Unit 849- Level 1st-Kitchen (4) - Marbel sheet flooring w/ mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1032-Mastic 2 331815085-0033B	Unit 849- Level 1st-Kitchen (4) - Marbel sheet flooring w/ mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1033-Vinyl Sheet Flooring 331815085-0034	Unit 849- Level 1st-Kitchen (5) - Sheet flooring w/ vapor paper	Gray/Beige Fibrous Heterogeneous		75% Non-fibrous (Other)	25% Chrysotile
1033-Vapor Paper 331815085-0034A	Unit 849- Level 1st-Kitchen (5) - Sheet flooring w/ vapor paper	Gray Fibrous Homogeneous	80% Cellulose	20% Non-fibrous (Other)	None Detected
1034-Vinyl Sheet Flooring 331815085-0035	Unit 851- Level 1st-Kitchen (1) - Sheet flooring plain w/ mastic	Gray/Beige Fibrous Heterogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
1034-Mastic 331815085-0035A	Unit 851- Level 1st-Kitchen (1) - Sheet flooring plain w/ mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1035-Vinyl Floor Tile 331815085-0036	Unit 851- Level 1st-Kitchen (2) - 12" beige tile, beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1035-Mastic 1 331815085-0036A	Unit 851- Level 1st-Kitchen (2) - 12" beige tile, beige mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1035-Mastic 2 331815085-0036B	Unit 851- Level 1st-Kitchen (2) - 12" beige tile, beige mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1036-Mastic 1 331815085-0037	Unit 851- Level 1st-Kitchen (3) - Marbel sheet flooring w/ mastic	White/Clear Non-Fibrous Heterogeneous		100% Non-fibrous (Other)	None Detected
1036-Vinyl Sheet Flooring 331815085-0037A	Unit 851- Level 1st-Kitchen (3) - Marbel sheet flooring w/ mastic	Beige Fibrous Homogeneous	10% Cellulose	50% Non-fibrous (Other)	40% Chrysotile
1036-Mastic 2 331815085-0037B	Unit 851- Level 1st-Kitchen (3) - Marbel sheet flooring w/ mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1037-Vinyl Sheet Flooring 331815085-0038	Unit 851- Level 1st-Kitchen (4) - Red/blue tile, vapor paper, black mastic	Tan/Various/Black Fibrous Heterogeneous	50% Cellulose	50% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1106-Drywall 331815350-0008A	Unit 821 Level 1st - Kitchen - Drywall w/ J.C	Brown/White Fibrous Heterogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
1107-Joint Compound 331815350-0009	Unit 823 Level 1st - Kitchen - Drywall w/ J.C	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1107-Drywall 331815350-0009A	Unit 823 Level 1st - Kitchen - Drywall w/ J.C	Brown/White Fibrous Heterogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
1108-Floor Tile 331815350-0010	Unit 821 Level 1st - Living Room - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1108-Mastic 331815350-0010A	Unit 821 Level 1st - Living Room - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1109-Floor Tile 331815350-0011	Unit 821 Level 1st - Hall - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1109-Mastic 331815350-0011A	Unit 821 Level 1st - Hall - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1110-Floor Tile 331815350-0012	Unit 821 Level 1st - Bedroom 2 - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1110-Mastic 331815350-0012A	Unit 821 Level 1st - Bedroom 2 - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1111-Floor Tile 331815350-0013	Unit 823 Level 1st - Living Room - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1111-Mastic 331815350-0013A	Unit 823 Level 1st - Living Room - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1112-Floor Tile 331815350-0014	Unit 823 Level 1st - Bedroom 1 - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1112-Mastic 331815350-0014A	Unit 823 Level 1st - Bedroom 1 - Top Layer: 12" Beige w. Specs Tile w/ Beige Mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1179-Drywall	Unit 803 1st Level Kitchen - White	Brown/White Fibrous	8% Cellulose	92% Non-fibrous (Other)	None Detected
331815332-0036A	Drywall w/ J.C.	Heterogeneous			

Analyst(s)

Christopher Miranda (31)

Sophia Nguyen (50)

Michael DeCavallas, Laboratory Manager  
or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1209-Vinyl Sheet Flooring 331815346-0030	Unit 3416 1st Level Kitchen - Tan Bottom Layer: Red/Blue Specs Sheet Floor w/ Mastic, Vapor <i>Insufficient mastic material for analysis</i>	Gray/Various/Beige Fibrous Heterogeneous		85% Non-fibrous (Other)	15% Chrysotile
1209-Vapor Paper 331815346-0030A	Unit 3416 1st Level Kitchen - Tan Bottom Layer: Red/Blue Specs Sheet Floor w/ Mastic, Vapor	Brown/Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
1210-Vinyl Sheet Flooring 331815346-0031	Unit 3408 1st Level Kitchen - Tan Bottom Middle Layer: Red/Blue Specs Sheet Floor w/ Mastic, Vapor <i>Mastic not found in sample</i>	Gray/Black/Beige Fibrous Heterogeneous	30% Cellulose	70% Non-fibrous (Other)	None Detected
1211-Mastic 331815346-0032	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1211-Floor Tile 331815346-0032A	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Red Non-Fibrous Homogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
1211-Vapor Paper 331815346-0032B	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
1212-Mastic 331815346-0033	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1212-Floor Tile 331815346-0033A	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Red Non-Fibrous Homogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected
1212-Vapor Paper 331815346-0033B	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
1213-Mastic 331815346-0034	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1213-Floor Tile 331815346-0034A	Unit 3408 1st Level Kitchen - Red Bottom Layer: 9" Red Tile w/ Black Mastic, Vapor Paper	Red Non-Fibrous Homogeneous	5% Cellulose	95% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing Huntington Beach, CA NVLAP Lab Code 101384-0, CA ELAP 1406

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1288-Vinyl Sheet Flooring 331815341-0022	Unit 3488 1st Level Bathroom - White 1st layer: 6" square sheet floor w/ mastic	Gray/Beige Fibrous Heterogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
1288-Mastic 331815341-0022A	Unit 3488 1st Level Bathroom - White 1st layer: 6" square sheet floor w/ mastic	Yellow Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1288-Leveler 331815341-0022B	Unit 3488 1st Level Bathroom - White 1st layer: 6" square sheet floor w/ mastic	White Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1289-Sheet Flooring 331815341-0023	Unit 3488 1st Level Kitchen - White small triangles white; beige w/ white mastic	White/Beige Fibrous Heterogeneous	25% Cellulose	75% Non-fibrous (Other)	None Detected
1289-Mastic 331815341-0023A	Unit 3488 1st Level Kitchen - White small triangles white; beige w/ white mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1290-Sheet Flooring 331815341-0024	Unit 3488 1st Level Kitchen - White small triangles white; beige w/ white mastic	White/Beige Fibrous Heterogeneous	25% Cellulose	75% Non-fibrous (Other)	None Detected
1290-Mastic 331815341-0024A	Unit 3488 1st Level Kitchen - White small triangles white; beige w/ white mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1291-Sheet Flooring 331815341-0025	Unit 3480 1st Level Bathroom - White small triangles white; beige w/ white mastic	Gray/Beige Fibrous Heterogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
1291-Mastic 331815341-0025A	Unit 3480 1st Level Bathroom - White small triangles white; beige w/ white mastic	Beige Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1292-Sheet Flooring 331815341-0026	Unit 3488 1st Level Kitchen - White flower pattern yellow w/ beige mastic <i>Mastic not found in sample.</i>	Brown/Gray/Yellow Fibrous Heterogeneous		75% Non-fibrous (Other)	25% Chrysotile
1292-Leveler 331815341-0026A	Unit 3488 1st Level Kitchen - White flower pattern yellow w/ beige mastic	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1293-Sheet Flooring 331815341-0027	Unit 3488 1st Level Kitchen - White flower pattern yellow w/ beige mastic <i>Mastic not found in sample.</i>	Brown/Gray/Yellow Fibrous Heterogeneous		75% Non-fibrous (Other)	25% Chrysotile
1293-Leveler 331815341-0027A	Unit 3488 1st Level Kitchen - White flower pattern yellow w/ beige mastic	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
1294-Sheet Flooring 331815341-0028	Unit 3480 1st Level Kitchen - White flower pattern yellow w/ beige mastic <i>Mastic not found in sample.</i>	Gray/Tan/Yellow Fibrous Heterogeneous		80% Non-fibrous (Other)	20% Chrysotile

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Saint Louis, MO NVLAP Lab Code 200742-0

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Houston, TX NVLAP Lab Code 102106-0, AZ 0925, CO AL-15355, LA 04126, TX 300159

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Houston, TX NVLAP Lab Code 102106-0, AZ 0925, CO AL-15355, LA 04126, TX 300159

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Depew, NY NVLAP Lab Code 200056-0

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Depew, NY NVLAP Lab Code 200056-0

or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Saint Louis, MO NVLAP Lab Code 200742-0

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
1706-Plaster <i>151805782-0001</i>	Plaster w/ Button - Living Rm	Beige Non-Fibrous Homogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected
1706-Drywall <i>151805782-0001A</i>	Plaster w/ Button - Living Rm	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1707-Plaster <i>151805782-0002</i>	Plaster w/ Button - Kitchen	Beige Non-Fibrous Homogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected
1707-Drywall <i>151805782-0002A</i>	Plaster w/ Button - Kitchen	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1708-Plaster <i>151805782-0003</i> <i>Inseparable paint / coating layer included in analysis</i>	Plaster w/ Button - Bedrm 1	Pink/Beige Non-Fibrous Heterogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected
1708-Drywall <i>151805782-0003A</i>	Plaster w/ Button - Bedrm 1	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1709-Plaster <i>151805782-0004</i> <i>Inseparable paint / coating layer included in analysis</i>	Plaster w/ Button - Bedrm 2	White/Blue/Beige Non-Fibrous Heterogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected
1709-Drywall <i>151805782-0004A</i>	Plaster w/ Button - Bedrm 2	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1710-Plaster <i>151805782-0005</i>	Plaster w/ Button - Living Rm	Beige Non-Fibrous Homogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected
1710-Drywall <i>151805782-0005A</i>	Plaster w/ Button - Living Rm	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1711-Drywall <i>151805782-0006</i>	Plaster w/ Button - Hall	Brown/White Non-Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1711-Plaster <i>151805782-0006A</i>	Plaster w/ Button - Hall	Beige Non-Fibrous Homogeneous		15% Ca Carbonate 85% Non-fibrous (Other)	None Detected
1711-Texture <i>151805782-0006B</i> <i>Inseparable paint / coating layer included in analysis</i>	Plaster w/ Button - Hall	White/Beige Non-Fibrous Heterogeneous		20% Ca Carbonate 80% Non-fibrous (Other)	None Detected
1712-Drywall <i>151805782-0007</i>	Plaster w/ Button - Bedrm 1	Brown/White Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
1712-Plaster <i>151805782-0007A</i>	Plaster w/ Button - Bedrm 1	Gray/Beige Non-Fibrous Homogeneous		10% Ca Carbonate 90% Non-fibrous (Other)	None Detected

 or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Houston, TX NVLAP Lab Code 102106-0, AZ 0925, CO AL-15355, LA 04126, TX 300159

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Dallas, TX NVLAP Lab Code 600111-0, TX 300456

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

## PROJECT AND SAMPLE INFORMATION

PROJECT NUMBER: 7076.1017.0

PROJECT ID: Canyon Crest Family Housing Survey

NUMBER OF SAMPLES: 397

SAMPLE NUMBERS: 1309-1705

TYPE OF SAMPLES (CIRCLE ONE):

AIR

TAPE

WATER

WIPE

 BULK

SOIL

ZEFON  
AIR-O-CELLANDERSEN  
PLATE

OTHER

TYPE OF ANALYSIS:

Asbestos

Phase Contrast Microscopy  
Polarized Light Microscopy  
1st Positive Stop

Lead

Flame Atomic Absorption  
TTLIC

STLC

TCLP

Point Count \_\_\_\_\_ 400 Point Count \_\_\_\_\_ 1000 Point Count \_\_\_\_\_

Transmission Electron Microscopy

Qualitative \_\_\_\_\_ Quantitative \_\_\_\_\_

Culturable Air

Andersen Fungi (genue ID, Aspergillus)  
Andersen Bacteria

Non-Culturable Air

Non-Viable Spore Trap Slide

Surface Samples

Surface Sample (direct examination)

Culturable Samples

Quantitative Fungi-dust, bulk swab-1 medium  
Quantitative Fungi-dust, bulk swab-3 media  
Quantitative Bacteria-dust, bulk swab-1 medium  
Quantitative Bacteria-dust, bulk, swab-3 media  
E.coli and Coliforms (MUG)

Other \_\_\_\_\_

TURNAROUND TIME (CIRCLE ONE):

Rush

12 HOURS

24 HOURS

48 HOURS

3 DAYS

 5 DAYS

5-10 DAYS

OTHER

REPORT RESULTS VIA (CIRCLE ALL THAT APPLY):

PHONE

FAX

WRITTEN  
REPORT PDF

NOTES/COMMENTS:

Special Project "JS" - Perform layered analysis and provide layered results.

TRANSMITTAL RECORD:

Relinquished By: *J. Myall*

Date: 08-13-18

Time: 12:15

Received By: *J. Myall*

Date: 8-13-18

Time: 12:15

Relinquished By: \_\_\_\_\_

Date: \_\_\_\_\_

Time: \_\_\_\_\_

Received By: *Anne (pu) 8/13/18*

Date: \_\_\_\_\_

Time: 2:55 PM

LABORATORY INFORMATION:

NAME: LA Testing

LOCATION: \_\_\_\_\_

DISPOSITION OF SAMPLES:

 RETURN

\_\_\_\_\_ DAYS AFTER ANALYSIS

 OTHER RETAIN FOR

\_\_\_\_\_ DAYS

 YEAR (S)

Revised 9/29/06

#### PROJECT AND SAMPLE INFORMATION

PROJECT NUMBER: 7076.1017.0

PROJECT ID: Canyon Crest Family Housing Survey

NUMBER OF SAMPLES: 397

SAMPLE NUMBERS: 1309-1705

TYPE OF SAMPLES (CIRCLE ONE):

- AIR
- BULK
- TAPE
- SOIL
- WATER
- ZEFON
- AIR-O-CELL
- WIPE
- ANDERSEN
- PLATE
- OTHER

TYPE OF ANALYSIS:

##### Asbestos

- Phase Contrast Microscopy
- Polarized Light Microscopy
- 1st Positive Stop
- Point Count
- 400 Point Count
- 1000 Point Count
- Transmission Electron Microscopy
- Qualitative
- Quantitative

##### Lead

- Flame Atomic Absorption
- TTLC
- STLC
- TCLP

##### Culturable Air

- Andersen Fungi (genus ID, Aspergillus)
- Andersen Bacteria

##### Non-Culturable Air

- Non-Viable Spore Trap Slide

##### Surface Samples

- Surface Sample (direct examination)

##### Culturable Samples

- Quantitative Fungi-dust, bulk swab-1 medium
- Quantitative Fungi-dust, bulk swab-3 media
- Quantitative Bactera-dust, bulk swab-1 medium
- Quantitative Bactera-dust, bulk, swab-3 media
- E.coli and Coliforms (MUG)

##### Other

TURNAROUND TIME (CIRCLE ONE):

- Rush
- 12 HOURS
- 24 HOURS
- 48 HOURS
- 3 DAYS
- 5 DAYS
- 5-10 DAYS
- OTHER

REPORT RESULTS VIA (CIRCLE ALL THAT APPLY):

- PHONE
- FAX
- WRITTEN REPORT
- PDF

NOTES/COMMENTS:

Special Project "JS" - Perform layered analysis and provide layered results:

**Disclaimer**

Use of this FedEx shipping label is subject to the following restrictions and conditions:

**IMPORTANT! Do not duplicate this label. Each package must contain a unique tracking number in order to maintain tracking and billing integrity.**

1. The shipment must be via FedEx packaging (FedEx envelope pack or FedEx box); this free shipping label is not valid for use on non-standard FedEx packages nor coolers or other large boxes.
2. Valid for shipment of the following samples only: Lead analysis of paint chips, air samples, or wipe samples; Asbestos testing of bulk material samples, wipe/dust samples, or air sample cassettes; Microbiology air samples or bulk samples, tape lift samples, and/or swab samples. This label and shipping is not valid for shipment of any sample that requires a cooler or any other sample type not specifically described herein.
3. The package shipment must exceed a minimum of \$100 in analytical fees. If this minimum is not met, a minimum shipping fee of \$15 will be added to the analysis invoice.
4. Not valid for the shipping of any hazardous materials or items prohibited to be shipped by these means.
5. Valid for only those accounts pre-approved to use this service. This courtesy shipping service may be terminated at any time by EMSL for any customer accounts that are not in good standing due to late payment /COD Status, or any other reason in the sole determination of EMSL.
6. Any additional fees, including, but not limited to, custom pickup fees from FedEx, excessive weight fees, and any surcharge items added by FedEx, associated with this label/package will be back-charged to the customer that made the shipment.
7. This label is not valid for weekend or holiday deliveries.
8. Excludes Summa Canisters, Equipment Rental and Loaner Returns.
9. Valid in the Continental United States and within Canada.
10. For Metals (Air, Chips & Wipes), IH Organics (Formaldehyde, Methamphetamine, Isocyanates, BTEX, etc.), Combustion By-Products (Soot)/Material Identification, and Silica, Respirable Dust/Total Dust: Based on the method you are choosing, please confirm with the lab or your sales rep to determine they can perform the specific method you require, prior to shipping samples.

**Disclaimer**

Use of this FedEx shipping label is subject to the following restrictions and conditions:

**IMPORTANT! Do not duplicate this label. Each package must contain a unique tracking number in order to maintain tracking and billing integrity.**

1. The shipment must be via FedEx packaging (FedEx envelope pack or FedEx box); this free shipping label is not valid for use on non-standard FedEx packages nor coolers or other large boxes.
2. Valid for shipment of the following samples only: Lead analysis of paint chips, air samples, or wipe samples; Asbestos testing of bulk material samples, wipe/dust samples, or air sample cassettes; Microbiology air samples or bulk samples, tape lift samples, and/or swab samples. This label and shipping is not valid for shipment of any sample that requires a cooler or any other sample type not specifically described herein.
3. The package shipment must exceed a minimum of \$100 in analytical fees. If this minimum is not met, a minimum shipping fee of \$15 will be added to the analysis invoice.
4. Not valid for the shipping of any hazardous materials or items prohibited to be shipped by these means.
5. Valid for only those accounts pre-approved to use this service. This courtesy shipping service may be terminated at any time by EMSL for any customer accounts that are not in good standing due to late payment /COD Status, or any other reason in the sole determination of EMSL.
6. Any additional fees, including, but not limited to, custom pickup fees from FedEx, excessive weight fees, and any surcharge items added by FedEx, associated with this label/package will be back-charged to the customer that made the shipment.
7. This label is not valid for weekend or holiday deliveries.
8. Excludes Summa Canisters, Equipment Rental and Loaner Returns.
9. Valid in the Continental United States and within Canada.
10. For Metals (Air, Chips & Wipes), IH Organics (Formaldehyde, Methamphetamine, Isocyanates, BTEX, etc.), Combustion By-Products (Soot)/Material Identification, and Silica, Respirable Dust/Total Dust: Based on the method you are choosing, please confirm with the lab or your sales rep to determine they can perform the specific method you require, prior to shipping samples.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Dallas, TX NVLAP Lab Code 600111-0, TX 300456

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

## Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
2052-Skim Coat 031823924-0006	1ST FL/ SW - PLASTER	White Non-Fibrous Homogeneous		30% Quartz 15% Ca Carbonate 55% Non-fibrous (Other)	None Detected
2052-Rough Coat 031823924-0006A	1ST FL/ SW - PLASTER	Gray Non-Fibrous Homogeneous		40% Quartz 30% Gypsum 30% Non-fibrous (Other)	None Detected
2053-Joint Compound 031823924-0007	1ST FL/ NW - DRYWALL W/ JOINT C.	White Non-Fibrous Homogeneous		55% Ca Carbonate 45% Non-fibrous (Other)	None Detected
2053-Tape 031823924-0007A	1ST FL/ NW - DRYWALL W/ JOINT C.	Tan Fibrous Homogeneous	94% Cellulose	6% Non-fibrous (Other)	None Detected
2053-Sheetrock 031823924-0007B	1ST FL/ NW - DRYWALL W/ JOINT C.	Brown/Gray Non-Fibrous Homogeneous	10% Cellulose	60% Gypsum 30% Non-fibrous (Other)	None Detected
2054-Joint Compound 031823924-0008	1ST FL/ NW - DRYWALL W/ JOINT C.	White Non-Fibrous Homogeneous		60% Ca Carbonate 40% Non-fibrous (Other)	None Detected
2054-Sheetrock 031823924-0008A	1ST FL/ NW - DRYWALL W/ JOINT C.	Brown/Gray Non-Fibrous Homogeneous	10% Cellulose	62% Gypsum 28% Non-fibrous (Other)	None Detected
2055-Sheetrock 031823924-0009	1ST FL/ SE - DRYWALL W/ JOINT C.	Gray Non-Fibrous Homogeneous		55% Gypsum 45% Non-fibrous (Other)	None Detected
2055-Joint Compound 031823924-0009A	1ST FL/ SE - DRYWALL W/ JOINT C.	White Non-Fibrous Homogeneous		40% Ca Carbonate 60% Non-fibrous (Other)	None Detected
2056-Texture 031823924-0010	1ST FL/ NE - DRYWALL W/ TEXTURE	Tan/White Non-Fibrous Homogeneous		60% Ca Carbonate 4% Mica 36% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

<b>Receiving Lab:</b>	EMSL- Huntington Beach	<b>Phone Number:</b>	
		<b>Fax Number:</b>	
<b>Relinquished to:</b>	EMSL- Seattle	<b>Phone Number:</b>	
		<b>Fax Number:</b>	

**Does new lab hold equivalent or additional accreditation? \***       Yes     No

<b>EMSL Customer ID # (if known):</b>	32CITA50D
<b>Client Name:</b>	Citadel Environmental Services
<b>Client Project:</b>	Various
<b>Tests to be Performed:</b>	PLM
<b>Date Received:</b>	8/27/18
<b>Date Relinquished:</b>	8/28/18
<b>Date Due:</b>	1 week TAT Due 9/4/18 1:30 PM
<b>Special Instructions:</b> (e.g. Work Order # , required qualifications, project specific procedures/modifications)	*Verified and counted for by HB admin*  Per Jack Samuels; okay to send out

<b>Relinquished by (Signature):</b> 	<b>Date:</b> 8/18	<b>Received by (Signature):</b> 	<b>Date:</b> 8/29/18	<b>Time:</b> 9:00 AM
<b>Relinquished by (Signature):</b>	<b>Date:</b>	<b>Received by (Signature):</b>	<b>Date:</b>	

**Customer Agreement-** Please sign form and send to the receiving laboratory. By signing below, you agree to permit the above named receiving lab to transfer samples to a separate EMSL lab with equivalent qualifications\* for analysis. The final report will be issued from the analyzing laboratory. Ensure any requirements are listed in special instructions.

<b>Name (please print):</b> Claudia Morner	<b>Signature:</b> 	<b>Agent of:</b> LA Testing	<b>Date:</b> 8/28
---	-----------------------	--------------------------------	----------------------

*If this is a recurring project or sample type that may require samples to be relinquished on a regular basis, a Standing Agreement form must be completed.*

\* Receiving and analyzing labs shall be aware of required qualifications of project prior to transfer of samples.  
 Note: If customer has been notified and approved this transfer verbally or by e-mail, the receiving lab must sign for the customer above. EMSL employee filling out form on behalf of customer shall print name of person to whom they spoke, date agreement was received, and then sign under Signature.

**Disclaimer**

Use of this FedEx shipping label is subject to the following restrictions and conditions:

**IMPORTANT! Do not duplicate this label. Each package must contain a unique tracking number in order to maintain tracking and billing integrity.**

1. The shipment must be via FedEx packaging (FedEx envelope pack or FedEx box); this free shipping label is not valid for use on non-standard FedEx packages nor coolers or other large boxes.
2. Valid for shipment of the following samples only: Lead analysis of paint chips, air samples, or wipe samples; Asbestos testing of bulk material samples, wipe/dust samples, or air sample cassettes; Microbiology air samples or bulk samples, tape lift samples, and/or swab samples. This label and shipping is not valid for shipment of any sample that requires a cooler or any other sample type not specifically described herein.
3. The package shipment must exceed a minimum of \$100 in analytical fees. If this minimum is not met, a minimum shipping fee of \$15 will be added to the analysis invoice.
4. Not valid for the shipping of any hazardous materials or items prohibited to be shipped by these means.
5. Valid for only those accounts pre-approved to use this service. This courtesy shipping service may be terminated at any time by EMSL for any customer accounts that are not in good standing due to late payment /COD Status, or any other reason in the sole determination of EMSL.
6. Any additional fees, including, but not limited to, custom pickup fees from FedEx, excessive weight fees, and any surcharge items added by FedEx, associated with this label/package will be back-charged to the customer that made the shipment.
7. This label is not valid for weekend or holiday deliveries.
8. Excludes Summa Canisters, Equipment Rental and Loaner Returns.
9. Valid in the Continental United States and within Canada.
10. For Metals (Air, Chips & Wipes), IH Organics (Formaldehyde, Methamphetamine, Isocyanates, BTEX, etc.), Combustion By-Products (Soot)/Material Identification, and Silica, Respirable Dust/Total Dust: Based on the method you are choosing, please confirm with the lab or your sales rep to determine they can perform the specific method you require, prior to shipping samples.

**Customer Agreement-** Please sign form and send to the receiving laboratory. By signing below, you agree to permit the above named receiving lab to transfer samples to a separate EMSL lab with equivalent qualifications\* for analysis. The final report will be issued from the analyzing laboratory. Ensure any requirements are listed in special instructions.

<b>Name (please print):</b>	<b>Signature:</b>	<b>Agent of:</b>	<b>Date:</b>
Claudia Martinez		LA Testing	8/28

*If this is a recurring project or sample type that may require samples to be relinquished on a regular basis, a Standing Agreement form must be completed.*

\* Receiving and analyzing labs shall be aware of required qualifications of project prior to transfer of samples.  
 Note: If customer has been notified and approved this transfer verbally or by e-mail, the receiving lab must sign for the customer above. EMSL employee filling out form on behalf of customer shall print name of person to whom they spoke, date agreement was received, and then sign under Signature.

PROJECT AND SAMPLE INFORMATION

PROJECT NUMBER: 7076.1017.0

PROJECT ID: Canyon Crest Family Housing Survey

NUMBER OF SAMPLES: 221

SAMPLE NUMBERS: 1909-2129

TYPE OF SAMPLES (CIRCLE ONE):

- AIR
- BULK
- TAPE
- SOIL
- WATER
- ZEFON
- AIR-O-CELL
- WIPE
- ANDERSEN
- PLATE
- OTHER

TYPE OF ANALYSIS:

Asbestos

- Phase Contrast Microscopy
- Polarized Light Microscopy
- 1st Positive Stop
- Point Count
- 400 Point Count
- 1000 Point Count
- Transmission Electron Microscopy
- Qualitative
- Quantitative

Lead

- Flame Atomic Absorption
- TTLC
- STLC
- TCLP

Culturable Air

- Andersen Fungi (genus ID, Aspergillus)
- Andersen Bacteria

Non-Culturable Air

- Non-Viable Spore Trap Slide

Surface Samples

- Surface Sample (direct examination)

Culturable Samples

- Quantitative Fungi-dust, bulk swab-1 medium
- Quantitative Fungi-dust, bulk swab-3 media
- Quantitative Bacteria-dust, bulk swab-1 medium
- Quantitative Bacteria-dust, bulk, swab-3 media
- E.coli and Coliforms (MUG)

### UCR NDD - Construction Noise - Unmitigated

Reference Noise Distance 50

Reference Noise Level 89

Sensitive Receptor	Distance (feet)	Attenuation Factors	Maximum Construction Noise Level (dBA)	Existing Ambient (dBA, Leq)	New Ambient (dBA, Leq)	Increase
Child Development Center	50	6	83.0	55.5	83.0	27.5
Aberdeen-Iverness Apartments	90	6	77.9	62.2	78.0	15.8
Falkirk Apartments	115	6	75.8	59.6	75.9	16.3
Stonehaven Apartments	200	6	71.0	61.6	71.4	9.8
Gethsemane Lutheran Church	225	6	69.9	61.6	70.5	8.9
Pentland Hills Residence Halls	550	6	62.2	62.2	65.2	3.0
Highland Elementary School	800	6	58.9	55.5	60.5	5.0
Islamic Academy of Riverside	1000	6	57.0	59.6	61.5	1.9
REACH Leadership Academy	1200	6	55.4	59.6	61.0	1.4

A 6 dBA attenuation was given for hard ground surface, and 3 dBA reduction was given for the first row of buildings intervening between the construction site and sensitive receptors (1.5 dBA for subsequent intervening structures), as recommended by the Caltrans Technical Noise Supplement.

### UCR NDD - Construction Noise - Mitigated

Reference Noise Distance 50

Reference Noise Level 89

Sensitive Receptor	Distance (feet)	Mitigation Factors	Attenuation Factors	Maximum Construction Noise Level (dBA)	Existing Ambient (dBA, Leq)	New Ambient (dBA, Leq)	Increase
Child Development Center	50	19	6	64.0	55.5	64.6	9.1
Aberdeen-Iverness Apartments	90	8	6	69.9	62.2	70.6	8.4
Falkirk Apartments	115	8	6	67.8	59.6	68.4	8.8
Stonehaven Apartments	200	8	6	63.0	61.6	65.3	3.7
Gethsemane Lutheran Church	225	8	6	61.9	61.6	64.8	3.2
Pentland Hills Residence Halls	550	8	6	64.6	62.2	66.6	4.4
Highland Elementary School	800	8	6	63.0	55.5	63.7	8.2
Islamic Academy of Riverside	1000	8	6	62.0	59.6	64.0	4.4
REACH Leadership Academy	1200	8	6	61.2	59.6	63.5	3.9

A 3 dBA reduction was given for mufflers.

A 6 dBA attenuation was given for hard ground surface, and 3 dBA reduction was given for the first row of buildings intervening between the construction site and sensitive receptors (1.5 dBA for subsequent intervening structures), as recommended by the Caltrans Technical Noise

UCR NDD - HVAC Stationary Noise - Unmitigated

Reference Noise Distance 50

Reference Noise Level 72.7

Sensitive Receptor	Distance (feet)	Attenuation Factors	Maximum Noise Level (dBA)	Existing Ambient (dBA, Leq)	New Ambient (dBA, Leq)	Increase
Child Development Center	50	15	57.7	55.5	59.7	4.2
Aberdeen-Iverness Apartments	90	21	46.6	62.2	62.3	0.1
Falkirk Apartments	115	21	44.5	59.6	59.7	0.1
Stonehaven Apartments	200	21	39.7	61.6	61.6	0.0
Gethsemane Lutheran Church	225	21	38.6	61.6	61.6	0.0
Pentland Hills Residence Halls	550	21	30.9	62.2	62.2	0.0
Highland Elementary School	800	21	27.6	55.5	55.5	0.0
Islamic Academy of Riverside	1000	21	25.7	59.6	59.6	0.0
REACH Leadership Academy	1200	21	24.1	59.6	59.6	0.0

A 6 dBA attenuation was given for a point source over a hard ground surface, and 3 dBA reduction was given for the first row of buildings intervening between the construction site and sensitive receptors (1.5 dBA for subsequent intervening structures), as recommended by the Caltrans Technical Noise Supplement.

HVAC noise shielding would reduce noise levels by approximately 15 dBA.

UCR NDD - Parking Lot Noise - Unmitigated

Reference Noise Distance

50

Reference Noise Level

60

Sensitive Receptor	Distance (feet)	Attenuation Factors	Maximum Parking Noise Level (dBA)	Existing Ambient (dBA, Leq)	New Ambient (dBA, Leq)	Increase

## 1.0 EXECUTIVE SUMMARY

Fehr & Peers has completed a transportation impact analysis (TIA) for the proposed UC Riverside North District Development Project (Project) in Riverside, California. The project is a mixed-use project consisting of residence halls, student apartments and a mixed-use space. Phase 1 of the project consists of a 1,500-bed student apartment complex. The ultimate buildout of the proposed project consists of 4,500-beds of student apartments (including the 1,500-beds under Phase 1), 1,500-beds of residence halls and 62,800 square feet of mixed-use space.

As part of the TIA, and consistent with California Environmental Quality Act (CEQA) requirements, the following scenarios were analyzed:

- Existing (2017) Conditions: Analysis based on traffic volumes and lane geometries collected in November of 2017.
- Existing (2017) Plus Phase 1 Project Conditions: Analysis was based on the addition of Phase 1 Project trips to the Existing (2017) traffic volumes and lane geometries.
- Future (Year 2025) Conditions: Analysis based on traffic forecasts developed using the Riverside Traffic Analysis Model (RivTAM) for 2025, which is the year expected for buildout of the project site.
- Future (Year 2025) Plus Buildout Project Conditions: Analysis based on the addition of Project trips to the 2025 traffic forecasts.

## FINDINGS

Project impacts resulting from the planned development under Phase 1 were analyzed under existing conditions, and the ultimate buildout of the project site was analyzed under future (Year 2025) conditions. The student apartments constructed under Phase 1 are expected to generate approximately 6,000 daily vehicle trips, 145 AM peak hour trips and 330 PM peak hour trips. At buildout, the project will generate approximately 22,180 daily trips, 485 AM peak hour trips and 1,245 PM peak hour trips. However, as the Project will provide housing for 6,000 students at Buildout, adjustments were made to the future traffic forecasts to account for a shift of students from commuter students (students living off campus and commuting to campus) to resident students (students living on campus at the Project site).

Under Existing Conditions, only the Watkins Drive & Big Springs Road intersection was identified as operating unacceptably during peak travel hours. The following freeway facilities were identified as operating unacceptably during the AM peak hour:

- Eastbound diverge at University Avenue
- Eastbound merge at Blaine Street

Queueing was not found to exceed storage for any movement at the ramp terminal intersections.

Under Existing Plus Phase 1 conditions, all study intersections, except for the Watkins Drive & Big Springs Road intersection, operate acceptably. No freeway facilities operating unacceptably were degraded under Existing Plus Phase 1 conditions and queueing was not found to exceed storage for any movement at the ramp terminal intersections.

Under Future (Year 2025) conditions, the following intersections were found to operate unacceptably:

- Chicago Avenue & 3<sup>rd</sup> Street
- Watkins Drive & Big Springs Road

Under Future (Year 2025) Plus Buildout Project conditions, the following intersections were found to operate unacceptably with the Project in place:

- Chicago Avenue & 3<sup>rd</sup> Street
- Iowa Avenue & Blaine Street
- Aberdeen Drive & Linden Street
- Iowa Avenue & University Avenue
- Watkins Drive & Big Springs Road

No freeway facilities operating unacceptably were degraded with the Project in place and no facilities operating acceptably were degraded to unacceptable. Queueing does not exceed storage for any movements at the ramp terminal intersections with and without the project in place.

**Table ES-1** summarizes the significant impacts identified under the Existing Plus Phase 1 and Future Plus Buildout Project conditions. With the development of Phase 1, one significant intersection impact was identified, and no freeway impacts were found to occur. Under the Future Plus Buildout Project conditions, eight significant intersection impacts were found to occur, while no freeway impacts were identified.

## 2.0 INTRODUCTION

Fehr & Peers has completed a transportation impact analysis (TIA) for the proposed University of California Riverside (UC Riverside) North District Development Project (Project) in Riverside, California. This report summarizes the methodology, findings and conclusions of the analysis, including identification of recommended mitigation measures necessary for Project impacts, where feasible. This chapter outlines the geographic scope of the transportation impact analysis, including the study area.

### PROJECT DESCRIPTION

The UC Riverside North District Development is located on the UC Riverside campus, three miles east of downtown Riverside and just west of the Box Springs Mountains. The campus is generally bounded by University Avenue and Blaine Street on the north, Watkins Drive and Valencia Hill Drive on the east, and Iowa Avenue on the west. The campus is bisected diagonally by the I-215/SR-60 freeway. The area to the east of I-215/SR-60 is referred to as the East Campus.

The Project proposes to redevelop an existing housing site on the East Campus with a new higher-density mixed-use student housing project. The Project site was previously the Canyon Crest Family Student Housing Complex, which included single-family dwellings. The housing units are now vacant, although some are used as storage and maintenance facilities, including permanent structures and modular units in the northwestern portion of the site. The Project designates land uses for the 55-acre site, and the Campus anticipates that the plan area will be developed in phases, beginning with Phase 1 in the southern portion of the site. The Project includes a mix of land use designations that would allow for the construction of student housing units (for first year, second year, transfer, and upper division undergraduate and graduate students), support spaces, site improvements, utilities and supporting infrastructure improvements, dining facilities, an athletic events center, and related parking. The site plan is provided on **Figure 1**.

The land uses for the Project are summarized below:

- Student Apartments with 1,500 beds, completed as Phase 1 by 2019/20
- Student Apartments with 3,000 beds and Residence Halls with 1,500 beds, completed as part of Project buildout by 2024/25
- Resident life amenity spaces, living and learning spaces, resident life support spaces and dining facilities as part of the residential spaces
- 62,800 KSF of mixed-use retail space
- Athletic Events Center with 5,000-7,000 seats

Figure 1  
Project Site Plan

The site is surrounded by Blaine Street and a small shopping plaza to the north, Canyon Crest Drive and the Falkirk Apartments to the west, and the Campus to the south. The Plan area is bounded by Linden Street to the south along with the Police Facility, a track facility, the Student Recreation Center, and the Aberdeen-Inverness (A-I) Residence Halls. To the east of the site are parking lots, the UC Riverside Child Development Center, and the Campus Corporation Yard (which includes three campus support facility buildings [Corporation A, B, and C], two warehouses (Warehouse #1 and #2), the Mail Services building, the Transportation and Parking Services (TAPS) building and yard, a car shed, a gas storage building, and outdoor storage and parking areas).

Driveways from Linden Street, Blaine Street and Watkins Drive will provide vehicle access to the site. The driveways from Linden Street and Blaine Street will also be designated as Class III bicycle facilities for shared use with bicyclists. Bicycle access to the site will also be provided from Canyon Crest Drive and from two access points on Linden Street, one of which will provide a connection to the planned North Recreational Mall, which will extend from Linden Street to Lot 25 to the south.

Parking on site will be provided in two parking areas, the North Parking Area and South Parking Area and two additional lots for the UC Riverside Childcare Development Center. Under Phase 1 of the Project, 844 total parking spaces will be provided on site in surface lots. When Project Buildout occurs, the North Parking Area and South Parking Area surface lots will be reconfigured to parking structures and up to 2,164 parking spaces will be provided on site.

## STUDY AREA

The study area and analyzed intersections were determined based on preliminary trip generation, trip distribution, and trip assignment estimates developed for the Project, and input from staff at UC Riverside. The following 15 study intersections were identified and are included in this traffic study:

- 1) Iowa Avenue & Massachusetts Avenue
- 2) Chicago Avenue & 3<sup>rd</sup> Street
- 3) I-215 SB & 3<sup>rd</sup> Street
- 4) I-215 NB & 3<sup>rd</sup> Street
- 5) Iowa Avenue & Blaine Street
- 6) Rustin Avenue & Blaine Street
- 7) Canyon Crest Drive & Blaine Street
- 8) Watkins Dr & Blaine Street
- 9) Iowa Avenue & Linden Street
- 10) Canyon Crest Drive & Linden Street

- 11) Aberdeen Drive & Linden Street
- 12) Iowa Avenue & University Avenue
- 13) I-215 SB & University Avenue
- 14) I-215 NB & University Avenue
- 15) Watkins Drive & Big Springs Road

The study area and analyzed intersections are shown on **Figure 2**.

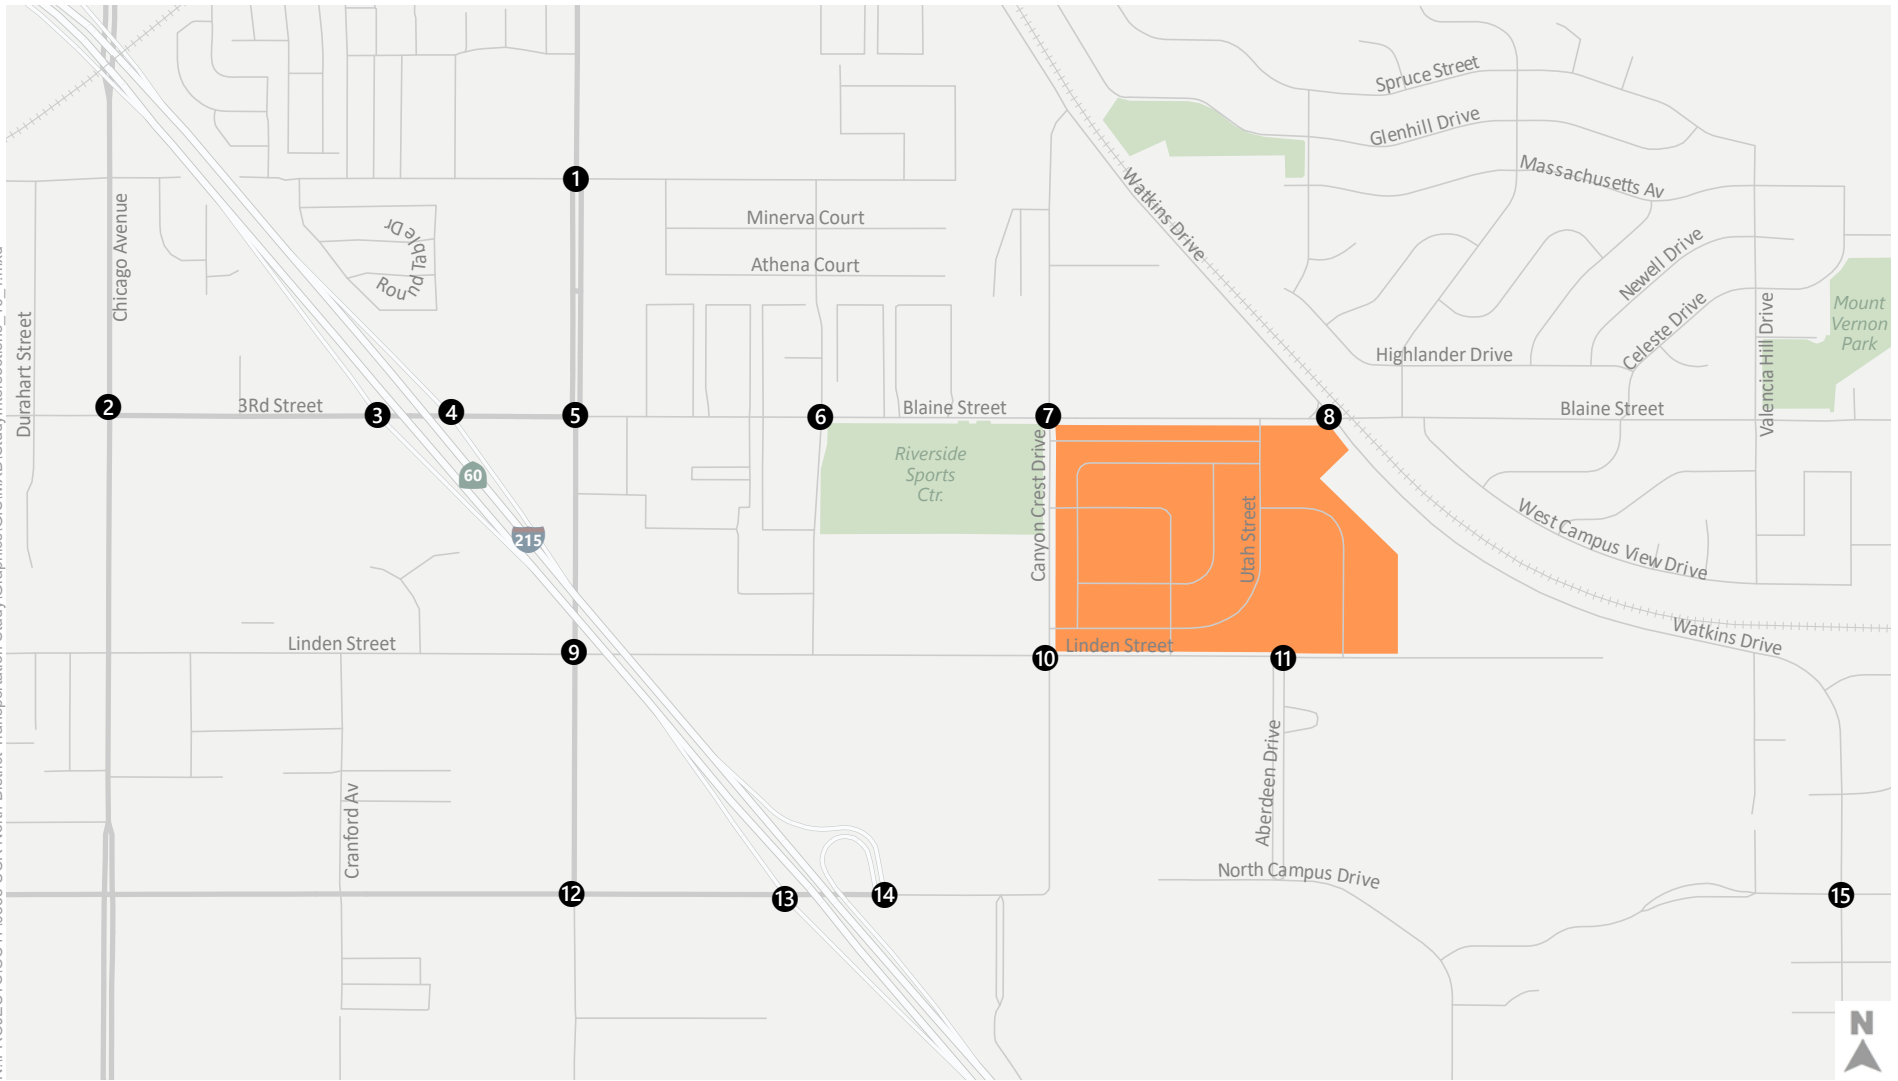

## ANALYSIS SCENARIOS

To identify potential significant Project impacts, the following four scenarios were analyzed:

- Existing (Year 2017) Conditions: Analysis based on traffic volumes and lane geometries collected in November of 2017.
- Existing (Year 2017) Plus Phase 1 Project Conditions: Analysis based on the addition of Phase 1 Project trips to the Existing (2017) traffic volumes and lane geometries.
- Future (Year 2025) Conditions: Analysis based on traffic forecasts developed using the Riverside Traffic Analysis Model (RivTAM) for 2025, which is the year that buildout of the project site is expected to occur.
- Future (Year 2025) Plus Buildout Project Conditions: Analysis based on the addition of Project trips to the forecasted 2025 traffic volumes.

The transportation impact analysis was performed during typical weekday AM and PM peak hour conditions.

Project Site & Study Intersections

## 3.0 ANALYSIS METHODOLOGY

This chapter discusses the analysis methodology and assumptions used to determine project impacts as documented in the *City of Riverside Traffic Impact Analysis Preparation Guidelines* (2017).

### LEVEL OF SERVICE CRITERIA

#### INTERSECTION ANALYSIS

Intersection operations analysis was performed using information collected in the field and provided by the City of Riverside. The analysis was completed using the Trafficware Synchro 10 software package. Synchro calculates vehicle delay and level of service (LOS) based on procedures identified in Chapter 19 Section 3 Approach A of the Highway Capacity Manual, 6th Edition (HCM) (Transportation Research Board, 2016), which is considered the state-of-the-practice methodology for evaluating intersection operations and is consistent with the City of Riverside guidelines.

LOS is a measure of traffic operating conditions, which varies from LOS A (indicating free-flow traffic conditions with little or no delay) to LOS F (representing over-saturated conditions where traffic flows exceed design capacity resulting in long queues and delays). These ratings represent the perspective of drivers and indicate the comfort and convenience associated with driving. Peak hour traffic volumes, lane configurations, and signal timing plans were used as inputs for the LOS calculations. **Table 1** summarizes the relationship between the average control delay per vehicle and LOS for signalized and unsignalized intersections. Results from Synchro were used to determine delay and LOS at all intersections. For signalized and all-way stop-controlled intersections, intersection LOS is determined based on average delay per the standard HCM 6th edition methodology. For two-way stop-controlled intersections, level of service is determined based on the worst-approach delay.

Queueing analysis was completed for all ramp terminal intersections in the study area using the Synchro software. Synchro reports the 95th percentile queue by movement, which was compared to available storage to determine if queueing for each movement would exceed available storage.

The following factors were applied in the intersection analysis:

- Peak Hour Factor (PHF) was based on traffic counts collected in the field for all analysis scenarios
- Heavy vehicle percentage was set to 2% for all analysis scenarios

**TABLE 1 – INTERSECTION LOS CRITERIA**

Level of Service	Description	Signalized Delay (Seconds)	Unsignalized Delay (Seconds)
A	Operations with very low delay occurring with favorable progression and/or short cycle length.	< 10.0	< 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	> 10.0 to 20.0	> 10.0 to 15.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	> 20.0 to 35.0	> 15.0 to 25.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	> 35.0 to 55.0	> 25.0 to 35.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	> 55.0 to 80.0	> 35.0 to 50.0
F	Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	> 80.0	> 50.0

Source: *Highway Capacity Manual 6<sup>th</sup> Edition* (Transportation Research Board, 2016).

## FREEWAY ANALYSIS

Freeway mainline segments and ramps were evaluated using a HCS equivalent tool, which applies methodologies contained in the Highway Capacity Manual (HCM 6th Edition) (Transportation Research Board, 2016). The LOS was calculated for each study facility based on density in number of vehicles per hour per lane. **Table 2** below describes the LOS thresholds for freeway sections identified in the HCM 6th Edition.

**TABLE 2 – BASIC, MERGE, DIVERGE & WEAVE FREEWAY SEGMENT LOS THRESHOLD**

Level of Service	Description	Density (vplpm) <sup>1</sup>	
		Mainline (Basic)	Ramp / Weave
A	Free-flow speeds prevail. Vehicles are almost completely unimpeded in their ability to maneuver within the traffic stream.	≤ 11	≤ 10
B	Free-flow speeds are maintained. The ability to maneuver with the traffic stream is only slightly restricted.	> 11 to 18	> 10 to 20

**TABLE 2 – BASIC, MERGE, DIVERGE & WEAVE FREEWAY SEGMENT LOS THRESHOLD**

Level of Service	Description	Density (vplpm) <sup>1</sup>	
		Mainline (Basic)	Ramp / Weave
C	Flow with speeds at or near free-flow speeds. Freedom to maneuver within the traffic stream is noticeably restricted, and lane changes require more care and vigilance on the part of the driver.	> 18 to 26	> 20 to 28
D	Speeds decline slightly with increasing flows. Freedom to maneuver with the traffic stream is more noticeably limited, and the driver experiences reduced physical and psychological comfort.	> 26 to 35	> 28 to 35
E	Operation at capacity. There are virtually no usable gaps within the traffic stream, leaving little room to maneuver. Any disruption can be expected to produce a breakdown with queuing.	> 35 to 45	> 35 to 45 <sup>2</sup>
F	Represents a breakdown in flow.	> 45	> 45 <sup>2</sup>

Notes:

1. Density is reported in vehicles per lane per mile.
  - 2 The maximum density for ramp junctions and weaving sections under LOS E is not defined in the HCM.
  - 3.The maximum density for basic segments of 45 vplpm was assumed to apply to ramp junctions and weaving sections.
- Source: Highway Capacity Manual 6th Edition (Transportation Research Board, 2016)

The following factors were used in the freeway analysis:

- PHF for Existing Conditions were determined based on existing traffic volumes collected from Caltrans Performance Measurement System (PeMS)
- Heavy vehicle percentage was determined using Caltrans average daily traffic (ADT) information

## PERFORMANCE CRITERIA AND THRESHOLDS OF SIGNIFICANCE

With the exception of Intersection 11 which falls within the control of UC Riverside, all other study intersections are within the jurisdiction of the City of Riverside or the California Department of Transportation (Caltrans). Therefore, significance criteria based on the traffic impact analysis guidelines for those agencies were applied in this assessment. The following performance criteria and thresholds of significance were used to determine impacts at study facilities:

- **City of Riverside:** The city has adopted LOS “D” as the minimum acceptable standard for roadways of Collector or higher classification. For projects that propose uses or intensities above that contained in the General Plan, the following impact criteria apply:

- If the addition of project related traffic causes either peak hour LOS to degrade from acceptable (LOS A thru D) to unacceptable levels (E or F) or the peak hour delay increases as follows:
  - LOS A/B – 10.0 Seconds
  - LOS C – 8.0 Seconds
  - LOS D – 5.0 Seconds
  - LOS E - 2.0 Seconds
  - LOS F- 1.0 Second
- **Caltrans:** Caltrans identifies a project as causing a significant impact when there is degradation in LOS D or better, or the project causes an increase in delay at an intersection operating at an unacceptable level.

## RIVERSIDE TRAFFIC ANALYSIS MODEL (RIVTAM)

The Riverside Traffic Analysis Model (RivTAM) was used to develop traffic forecasts for this study. The current RivTAM uses a 2008 base year, a 2035 future year, and Socioeconomic Data (SED) consistent with the Southern California Associated Governments (SCAG) 2008 Regional Transportation Plan (RTP) model. As the current version of RIVTAM is not consistent with the 2016 SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), the roadway networks and SED were reviewed for consistency with the 2016 RTP/SCS in the study area as described below.

### **Socio-Economic Data (SED)**

The Western Riverside Council of Governments (WRCOG) has completed an SED update within the WRCOG boundaries to maintain consistency with the 2016 SCAG RTP/SCS. Consistent with the SCAG model, this SED has a 2012 base year and a 2040 future year. This WRCOG SED information was utilized in the RivTAM model for both the base year and future year modeling efforts.

Campus growth information was provided by UC Riverside for use in this project. The future year land uses in RivTAM were updated to reflect growth consistent with expectations provided by UC Riverside. A list of approved and pending developments was also requested from the City of Riverside. This list was then reviewed with land use assumptions in the future year model to ensure that all reasonably foreseeable projects within a five-mile radius of UC Riverside were accounted for in the land uses assumed in the model. A list of approved and pending developments in the City of Riverside is provided in **Appendix B**.

## Roadway Network

As part of the RivTAM review, both the base year and future year roadway networks were examined for consistency with existing conditions and planned roadway improvements. The future year roadway network was compared to the 2016 SCAG RTP/SCS to verify that only projects planned to be in place before 2025 were assumed in the network. One project listed in the Constrained RTP Project List that is planned to be complete prior to 2025 and likely to impact traffic patterns in the study area is the widening Iowa Avenue from four lanes to six lanes from Blaine Street to the north City Limit (Opening Year (2021) to the north of the Project study area. The RTP also identifies a project that will add two High-Occupancy-Vehicle (HOV) lanes on I-215 from Nuevo Road to Box Springs Road; however, the Opening Year for that project is 2030. Therefore, it was not assumed in place under Year 2025 conditions when Project buildout is expected to occur.

## Model Forecasts

For this study, a method known as the difference method was applied to develop Future (Year 2025) traffic forecasts. This method is a state-of-the-practice approach consistent with NCHRP Report 765: Analytical Travel Forecasting Approaches for Project Level Planning and Design (Transportation Research Board, 2014) methodologies. Using this method, growth between the future year (2040) and base year (2012) model was determined. As the Buildout for the Project is 2025, interpolation was then used to develop growth representing eight years (2017 to 2025). This growth was then applied to existing peak hour traffic counts collected in 2017 to develop Future (2025) traffic volumes.

## PROJECT TRAFFIC VOLUMES

The methodology used to estimate changes in traffic volumes in the study area under Phase 1 and Buildout conditions is described below.

## PROJECT TRIP GENERATION

The estimated project trips were obtained by applying trip generation rates from two sources: the 2005 UC Riverside LRDP Traffic Impact Study and the 10<sup>th</sup> edition of the *Institute of Traffic Engineers Trip Generation Manual* (ITE).

To determine the appropriate source for trip generation rates for the new student housing, the trip generation rates collected as part of the 2005 UC Riverside LRDP were compared to other data readily available. For comparison purposes, the UC Riverside student housing rates were compared to trip

generation rates for housing at UC Santa Barbra (UCSB) and rates recently published by ITE for Off-Campus Student apartments. The trip rate comparison is summarized in **Table 3**.

**TABLE 3 – COMPARISON OF TRIP GENERATION RATES**

Land Use	Daily			AM			PM		
	UCSB	UCR	ITE	UCSB	UCR	ITE	UCSB	UCR	ITE
Apartments	2.737	4.004	3.65	0.08	0.088	0.13	0.19	0.220	0.28
Residence Halls	2.160	2.153	-	0.06	0.047	-	0.15	0.120	-

Source:

1. UCSB trip rates: *2005 UCSB LRDP Traffic Impact Study*.
2. UCR trip rates: *2005 UCR LRDP Traffic Impact Study*.
3. ITE trip rates: *ITE Trip Generation Manual 10<sup>th</sup> Edition*.

As shown above, the trip generation rates for UC Riverside and UCSB were found to be comparable during the AM and PM peak hours, whereas the UC Riverside rates were higher on a daily basis for student apartment uses. The ITE rates for off-campus student apartments are higher than those collected at UC Riverside and UCSB during the AM and PM peak hours, and lower than UC Riverside on a daily basis. The higher peak hour rates published by ITE are to be expected since the rates are for Off-Campus Student apartments that are likely further from main campus uses. As the data at UC Riverside was found to be reasonable compared to other sources, and is the best available local data, it was determined to be the most appropriate source for trip generation rates for the proposed Project.

Trips generated by the mixed-use space were estimated using the ITE trip generation rate for shopping centers. A trip credit was then applied to account for the mixed-use nature of the site and the proximity to the Campus for users traveling to the site using transit or active transportation (biking or walking). **Table 4** shows the percent reduction for transit and walking/biking trips applied to the trip generation. The National Household Travel Survey completed in 2009 and Campus Mode Split information from 2015 were used to determine the appropriate mode share percentages for trips in the area using transit and active transportation.

Given the mix of residential and retail land uses, some trips generated by the project would remain internal to the project site (i.e. a resident from the residence hall making a trip to the retail use). To determine the number of internal trips, the Mixed-Use Development (MXD) model was used to determine an appropriate internalization rate. The MXD model, developed through collaboration with the EPA and consultant experts, estimates internal capture by considering geographic factors, land use in the surrounding area, and site/surrounding area demographics. Internalization rates applied for the Project trip generation are

summarized in **Table 4**. During the PM peak hour, a 25 percent credit for pass-by trips was also assumed for trips generated by the retail use to account for trips that may already be occurring in the study area but will also utilize the retail component of the Project.

**TABLE 4 – TRIP CREDIT SUMMARY**

Trip Credit	Daily	AM	PM
Transit	6%	9%	10%
Walk/Bike	8%	9%	7%
Internalization	5%	7%	8%

Source:

1. *Bike/walk trip credit: National Household Travel Survey 2009*
2. *Internalization trip credit: Fehr and Peers MXD+ web-based tool*

The trip generation estimates are summarized in **Table 5** below. The trip generation estimates reflect the new housing and mixed-use portion of the Project site under Phase 1 and Buildout conditions. The Athletics Event Center would host soccer competitions, convocations, and graduations and is not expected to generate new vehicle trips during typical weekday peak hour operations.

**TABLE 5 – UC RIVERSIDE NORTH DISTRICT DEVELOPMENT PLAN TRIP GENERATION**

Notes:

[1] Source of Student Apartments trip rates: 2005 UCR LRDP Traffic Impact Study.

[2] Source of Residence Hall Housing trip rates: 2005 UCR LRDP Traffic Impact Study.

[a] National Household Travel Survey 2009 used for walk/bike data.

[b] Internalization is due to the mix of housing and commercial uses on site and calculated based on mixed-use trip generation.

[c] Pass-by trips is assumed to be 25% and applicable only for the PM Peak hour for the Shopping Center use.

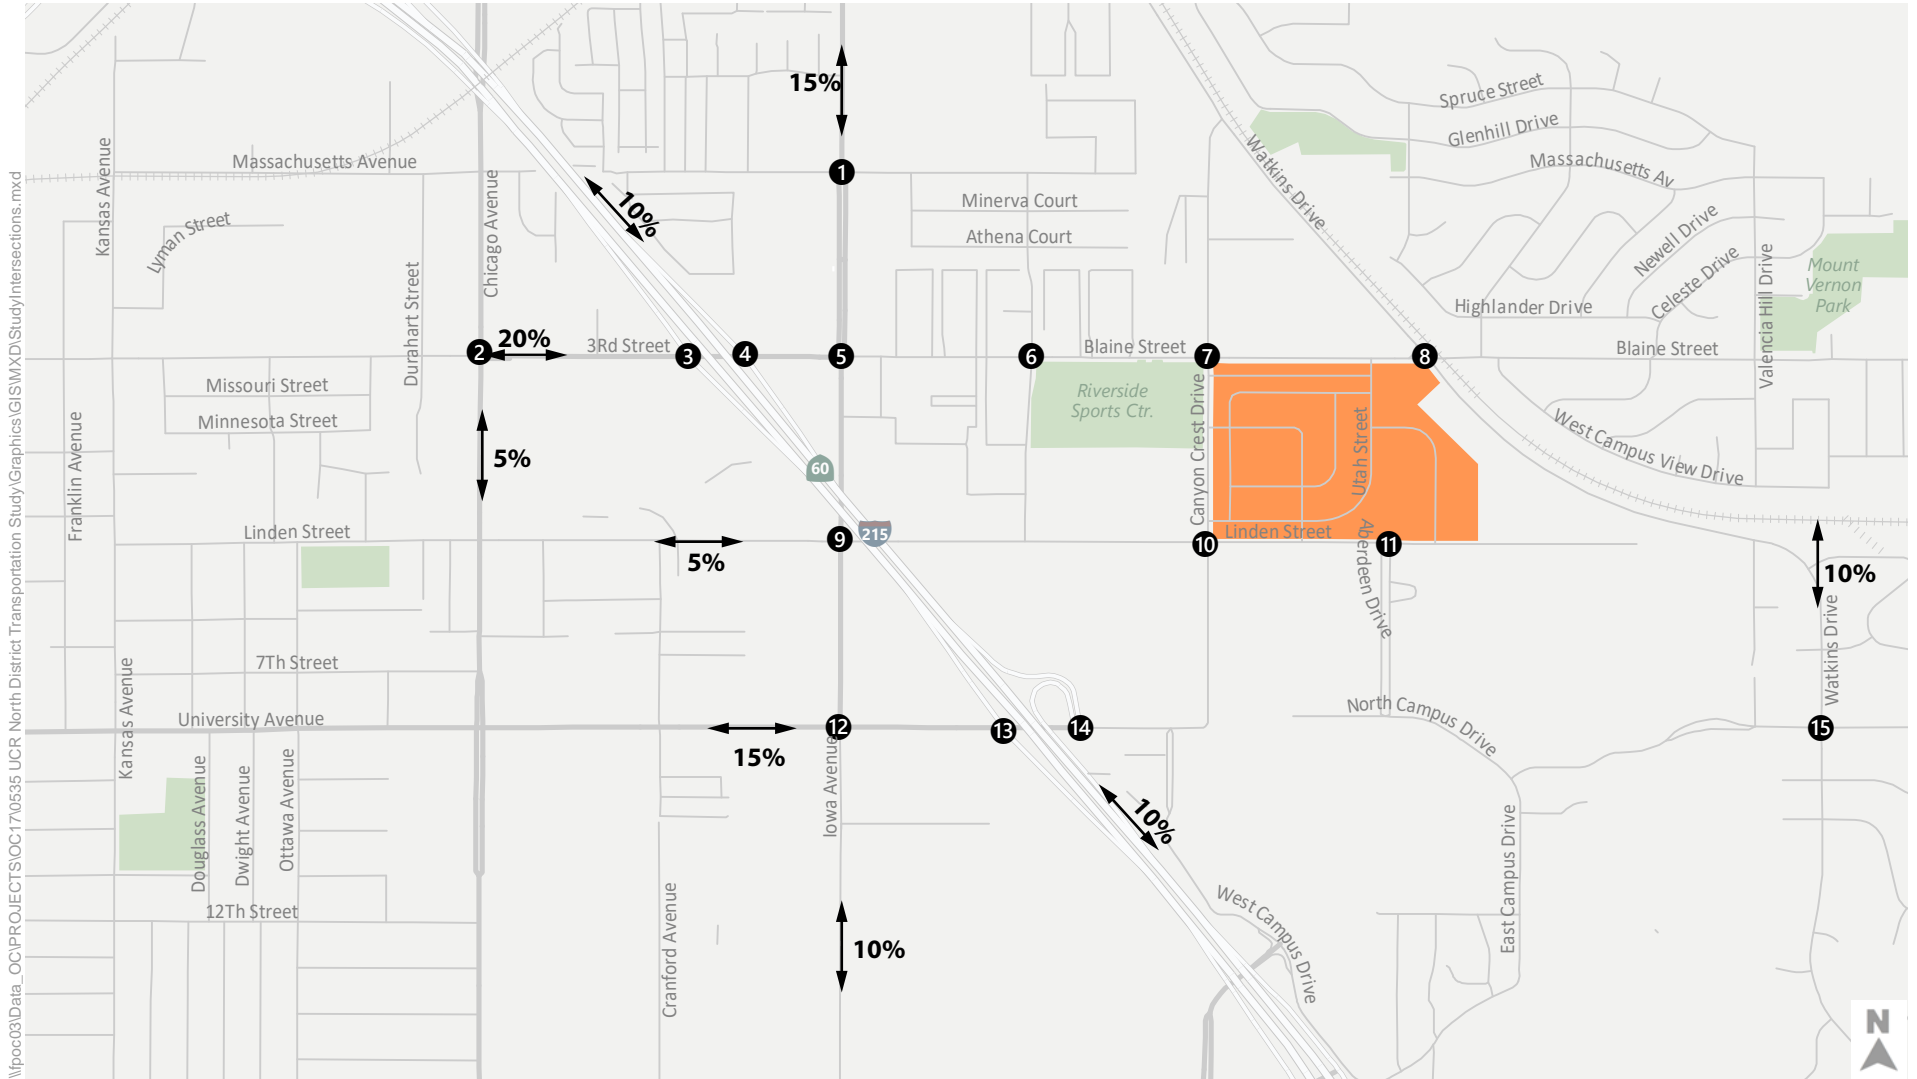

## PROJECT TRIP DISTRIBUTION

The Project trip distribution reflects the regional distribution of trips traveling to and from the Project site. To determine where trips traveling to and from the Project site would originate and end, a select zone analysis was performed for a traffic analysis zone (TAZ) near the proposed Project that had a similar land use mix to the Project. The results of the select zone analysis and local knowledge were combined to develop the regional distribution. The Project trip distribution is described below and shown on **Figure 3**:

- 20% - 3<sup>rd</sup>/Blaine Street
- 15% - University Avenue
- 10% - Watkins Drive

## PROJECT TRIP ASSIGNMENT

Based on the trip generation and trip distribution estimates developed and described above, Project trips were assigned to the study area roadway network. The assignment of "Project only" trips for the development took into consideration two scenarios: Phase 1 and Buildout. These are shown on **Figure 4** and **Figure 5**.

Project Site

## 4.0 EXISTING CONDITIONS

This chapter summarizes the Existing (2017) Conditions in the Project study area including the roadway, transit, bicycle, and pedestrian networks to document the current travel against which the Project will be assessed.

### EXISTING ROADWAY FACILITIES

#### REGIONAL ROADS

Regional roads in the Project vicinity include:

- Interstate 215 Freeway (I-215): I-215 is an interstate highway in the Inland Empire region of Southern California. It runs as an auxiliary route of I-215 in the north/south direction from Murrieta to northern San Bernardino. I-215 is located west of the Project site. Near the Project study area, it is generally an eight-lane facility (four lanes in each direction). Access to I-15 near the Project study area is provided at Blaine/3<sup>rd</sup> Street and University Avenue.

#### LOCAL ACCESS ROADS

Local access roads in the Project vicinity include:

- Iowa Avenue: Iowa Avenue is a four-lane facility between Massachusetts Avenue and University Avenue. Iowa Avenue is designated as an Arterial by the City of Riverside General Plan. It has a speed limit of 45 miles per hour (mph).
- Canyon Crest Drive: Canyon Crest is a north-south 66-ft two-lane collector that widens into an 88 ft four-lane Arterial. Access to the Project is provided by this roadway. It has a variable speed limit ranging between 25 and 40 miles per hour (mph).
- University Avenue: This is an east-west road four-lane facility. It is designated as a parkway in the City of Riverside General Plan. Access to the Project is provided by this roadway. It has a speed limit of 35 miles per hour (mph).
- Linden Street: This is an east-west roadway facility. It is designated as a two-lane 80 ft collector in the City of Riverside General Plan. Access to the Project is provided by this roadway. It has a speed limit of 40 miles per hour (mph).

## BICYCLE FACILITIES

Bicycle facilities in the City of Riverside are classified as follows:

### CLASS I BIKEWAYS (BIKE PATHS)

Class I bicycle facilities are bicycle trails or paths that are off-street and separated from automobiles. They are a minimum of eight feet in width for two-way travel and include bike lane signage and designated street crossings where needed. A Class I Bike Path may parallel a roadway (within the parkway) or may be a completely separate right-of-way that meanders through a neighborhood or along a flood control channel or utility right-of-way.

### CLASS II BIKEWAYS (BIKE LANES)

Class II bicycle facilities are striped lanes that provide bike travel and can be either located next to a curb or parking lane. If located next to a curb, a minimum width of five feet is recommended. However, a bike lane adjacent to a parking lane can be four feet in width. Bike lanes are exclusively for the use of bicycles and include bike lane signage, special lane lines, and pavement markings.

### CLASS III BIKEWAYS (BIKE ROUTES)

Class III Bikeways are streets providing for shared use by motor vehicles and bicyclists. While bicyclists have no exclusive use or priority, signage both by the side of the street and stenciled on the roadway surface alerts motorists to bicyclists sharing the roadway space and denotes that the street is an official bike route.

### CLASS IV BIKEWAYS (CYCLE TRACKS)

Class IV bicycle facilities, sometimes called cycle tracks or separated bikeways, provide a right-of-way designated exclusively for bicycle travel adjacent to a roadway and are protected from vehicular traffic via separations (e.g. grade separation, flexible posts, inflexible physical barriers, on-street parking). California Assembly Bill 1193 (AB 1193) legalized and established design standards for Class IV bikeways in 2015.

As shown in **Figure 6**, Riverside's existing bikeway network is comprised of Class II bike lanes along many major streets. According to the Riverside Bicycle Master Plan (adopted in May 2007), there is a total of 56.4 miles of existing bike lanes.

Within the study area, the following Class II bike lanes are provided:

- Blaine/3<sup>rd</sup> Street: Bike lanes are provided on Blaine/3<sup>rd</sup> street. These occur on both sides of the roadway.
- Linden Street: Bike lanes are provided on Linden street between Chicago Drive and Canyon Crest Drive. In the eastbound direction bike lanes are provided for the entire segment; however, in the westbound direction the dedicated striping ends at Niki Way.
- University Avenue: Bike lanes are provided on University Avenue on both sides of the roadway.
- Watkins Drive: Bike lanes are provided on Watkins Drive on both sides of the roadway.
- Big Springs Road: Bike lanes are provided on Big Springs Road on both sides of the roadway.
- Iowa Avenue: Bike lanes are provided on Iowa between Blaine and University Drive on both sides of the road.
- Canyon Crest: There are bike lanes Canyon Crest between Blaine and University Drive on both sides of the road.

### Bicycle Classes

- - - Proposed Class1
- Class 2
- Class 3
- Project Site

Figure 6  
Bicycle Facilities

## PEDESTRIAN FACILITIES

Interconnectivity of land uses, coupled with the provision of adequate pedestrian and bicycle facilities, is an important component of Riverside's future circulation network. The City seeks to expand pedestrian and bike path network to provide connections between schools, activity centers, parks and residential areas. A comprehensive trails system is intended to link residential areas, schools, parks and commercial centers so that residents can travel within the community without driving (City of Riverside General Plan, 2012).

Within the Project study area, sidewalks are provided generally adequately provided on the following streets:

- Blaine/3<sup>rd</sup> Street
- Linden Street
- University Drive
- Watkins Drive
- Big Springs Road
- Iowa Avenue
- Canyon Crest

The major streets that provide access to the Project include Blaine Street, Canyon Crest Drive and Linden Street. These roadways have well-connected and maintained sidewalk networks near the Project. These streets currently provide access for pedestrians to the bus stops nearby.

## TRANSIT FACILITIES

The transit facilities provided in the City of Riverside are described below.

### METROLINK

Commuter train service in the City of Riverside is provided by Metrolink, which operates seven commuter rail lines throughout Southern California. The UC Riverside /Riverside Hunter Park Metrolink Station is located north-west of the intersection between Malborough Avenue and Rustin Avenue, 3 miles north of the UC Riverside campus. UC Riverside is served by the 91/Perris Valley Line, which links Perris-South to LA Union Station on weekdays, and on weekends from downtown Riverside to LA Union Station.

## BUS TRANSIT

Riverside Transit Agency (RTA) provides fixed route, commuter and dial-a-ride bus service within western Riverside County, including the Cities of Riverside, Corona, Norco, Jurupa, Grand Terrace, Loma Linda, Moreno Valley, Perris, San Jacinto, Hemet, Lake Elsinore and Temecula. ADA services within the City of Riverside are provided by the City's Riverside Special Services. All buses on fixed-routes are equipped with bike racks that hold two bicycles.

RTA routes that serve areas closest to the UC Riverside campus include the following: Route 10, 13, 14, 51, and 204.

Route 10: (Big Springs & Watkins – Downtown Riverside – Galleria at Tyler) This route runs from Galleria at Tyler to the intersection between Big Springs and Watkins. It operates Monday thru Friday from 5:25 AM to 9:06 PM with 45- and 60-minute headways and on weekends from 8:00 AM to 7:40 PM. A bus stop is located near the project at the corner of Big Springs Road and Watkins Drive.

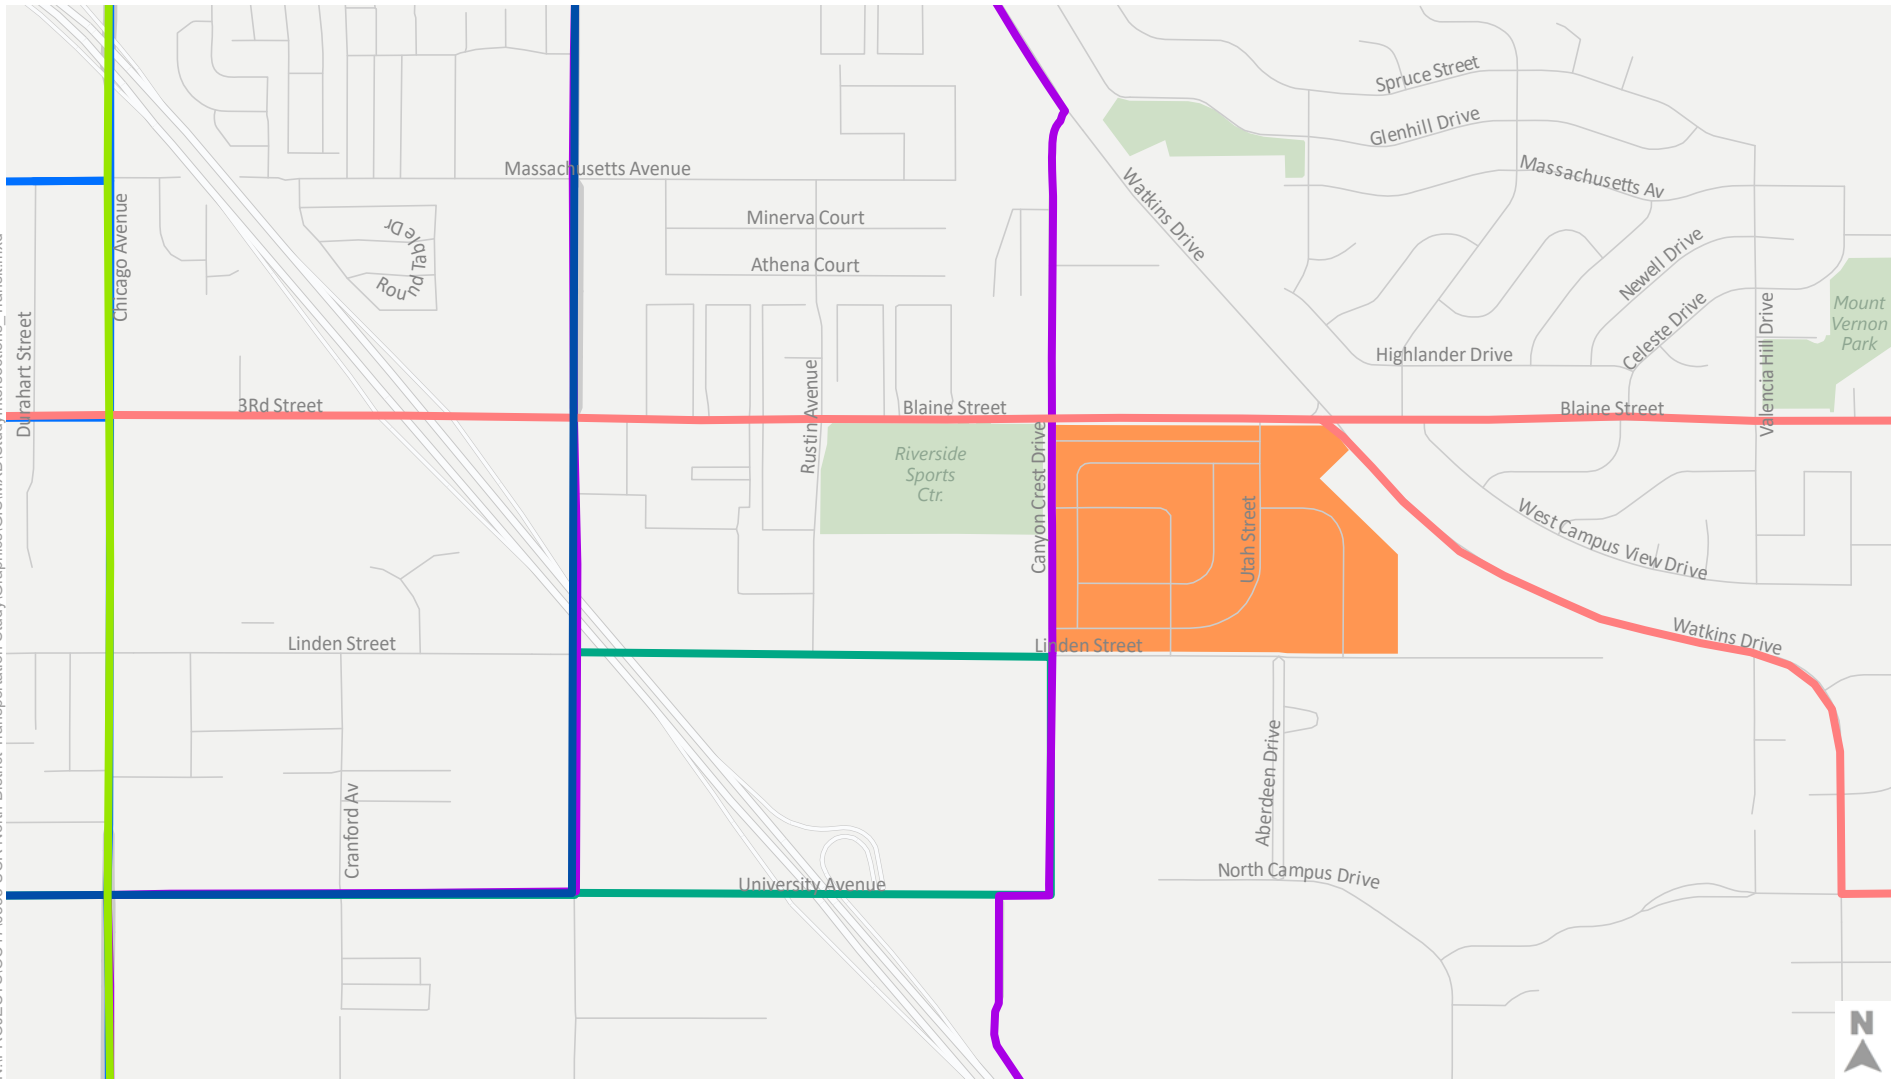

Route 13: (Hunter Park/UCR Metrolink Station – Downtown Riverside – Galleria at Tyler) This route runs from Galleria at Tyler to Hunter Park/UCR Metrolink Station. It operates Monday thru Friday from 4:00 AM to 9:00 PM with headways of about an hour and on weekends from 6:50 AM to 7:00 PM. A bus stop is located near the project at the corner of Chicago Avenue and Blaine Street.

Route 14: (Galleria at Tyler – Downtown Riverside – Loma Linda VA hospital) This route runs from Galleria at Tyler to the VA Hospital at Loma Linda. It operates Monday thru Friday from 5:50 AM to 7:40 PM with headways of about an hour and on weekends from 7:00 AM to 6:20 PM, with some exceptions for Sundays where trips do not run until about 9 AM. A bus stop is located near the project at the corner of Chicago Iowa Avenue and Blaine Street.

Route 51: (UC Riverside – Canyon Crest Town Center) This route runs from the University Village and Village Tower Apartments to the intersection between Chicago and Central. It operates Monday thru Friday from approximately 7:00 AM to 6:00 PM with 40-minute headways. A bus stop is located near the project at the corner of Blaine Street and Canyon Crest Drive.

Route 204: (UCR – Downtown Riverside – Ontario Mills Mall – Montclair Transit Center) This route runs from UCR Bannockburn to the Montclair Transit Center. It operates Monday thru Friday from 4:20 AM to 7:20 PM with headways of about an hour. A bus stop is located near the project at the corner of Linden Street and Canyon Crest Drive.

Figure 7  
Transit Facilities

## TRAFFIC VOLUMES AND CONFIGURATIONS

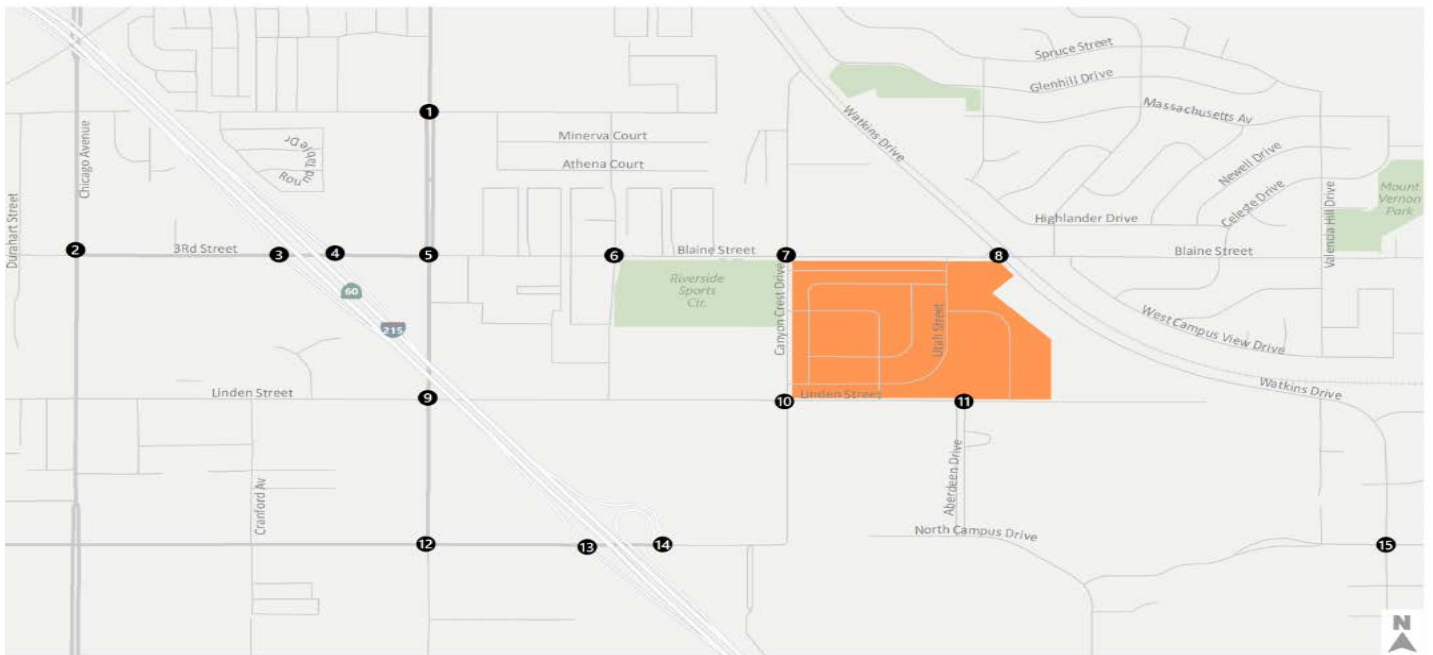

Existing AM peak period (7:00 to 9:00 AM) and PM peak period (4:00 to 6:00 PM) intersection counts were collected at the fifteen study intersections on November 14, 2017. Existing (2017) peak hour traffic volumes for the study intersections are shown on **Figure 8**. Existing traffic counts are provided in **Appendix A**.

As part of the field inventory, Fehr & Peers also collected the following information:

- Lane configurations
- Signal phasing
- Pedestrian and bicycle facilities

## INTERSECTION OPERATIONS

Existing traffic volumes, lane configurations, and signal timings were used to evaluate operations at the study intersections for Existing (2017) AM and PM peak hour conditions. The results are summarized in **Table 6**, showing LOS and delay at the study intersections. With the exception of Watkins Drive and Big Springs Road (Intersection 15), which operates at LOS E in both the AM and PM peak hours, all intersections operate acceptably at LOS D or better. Technical calculations are provided in **Appendix C**.

				PM	17.7	B
10	Canyon Crest Drive & Linden Street	City of Riverside	Signal	AM	19.3	B
				PM	21.4	C
11	Aberdeen Drive & Linden Street	UC Riverside	AWSC	AM	8.9	A
				PM	13.9	B
12	Iowa Avenue & University Avenue	City of Riverside	Signal	AM	16.4	B
				PM	27.4	C
13	I-215 SB & University Avenue	Caltrans	Signal	AM	20.4	C
				PM	12.2	B
14	I-215 NB & University Avenue	Caltrans	Signal	AM	15.7	B
				PM	11.3	B
15	Watkins Drive & Big Springs Road	City of Riverside	AWSC	AM	<b>57.2</b>	<b>F</b>
				PM	<b>52.2</b>	<b>F</b>

Notes:

1. Delay is calculated using Synchro HCM 6<sup>th</sup> Edition Methodology, except for Intersection 10 where HCM 2000 is used due to the presence of a pedestrian scramble phase.
2. **Bold** type indicates an unacceptable LOS based on the City's significance criteria.
3. AWSC indicates that this is an all-way stop control where all approaches have stop signs.

## FREEWAY ANALYSIS

The operations analysis for the freeway facilities in the study area is summarized in **Table 7**. Under Existing (2017) conditions, the following locations were found to operate at LOS E or LOS F:

- Northbound Diverge at University Avenue (AM peak hour)
- Northbound Merge at Blaine Street (AM peak hour)

**TABLE 7 – EXISTING (2017) FREEWAY OPERATIONS**

Location	Segment Type	Existing			
		AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS
<b>Northbound I-215</b>					
Diverge at University Avenue	Weave	37	E	28	C
Merge at University Avenue	Weave	25	C	20	B
Diverge at Blaine Street	Weave	25	C	20	B
Merge at Blaine Street	Weave	-	F	25	C
<b>Southbound I-215</b>					
Diverge at Blaine Street	Weave	16	B	22	C
Merge at Blaine Street	Weave	11	B	24	C
Diverge at University Avenue	Weave	11	B	24	C
Merge at University Avenue	Weave	10	B	30	D

Notes:

1. Density is reported in vehicles per lane per mile.
2. The maximum density for ramp junctions and weaving sections under LOS E is not defined in the HCM.
3. The maximum density for basic segments of 45 vplpm was assumed to apply to ramp junctions and weaving sections.

## Queuing

Queuing results for the Existing (2017) conditions are summarized in **Table 8** below. As shown in the table, queuing was not found to exceed storage at any ramp terminal intersection.

**TABLE 8 – EXISTING (2017) QUEUING ANALYSIS**

Intersection		Ramp length (ft)	Movement	Length (ft)	AM Peak Hour		PM Peak Hour	
					Lane (ft)	Total (ft)	Lane (ft)	Total (ft)
3	I-215 SB & 3rd Street	1,430	SBTL	1,430	550	550	252	252

## 5.0 EXISTING (2017) PLUS PROJECT CONDITIONS

Traffic volumes for the Existing (Year 2017) Plus Project (Phase 1) Conditions scenario consist of volumes from the Existing (Year 2017) conditions plus Phase 1 volumes generated by the proposed Project as described in Chapter 3. The Existing (Year 2017) Plus Project traffic volumes are shown in **Figure 9**.

### INTERSECTION OPERATIONS

The intersection LOS results are summarized in **Table 9** for Existing Year (2017) Plus Project Conditions. With the exception of Watkins Drive and Big Springs Road (Intersection 15), which operates at LOS F in the AM and PM peak hour, all intersections operate acceptably at LOS D or better. Technical calculations for the Existing (2017) Plus Phase 1 conditions are provided in **Appendix C**.

### INTERSECTION IMPACTS

As shown in **Table 9**, using the significance criteria discussed in Chapter 3, the Project causes one significant impact to occur at Intersection 15, Watkins Drive and Big Springs Road.

1. Iowa Avenue/Massachusetts Ave	2. Chicago Avenue/3rd Street	3. I-215 SB/3rd Street	4. I-215 NB/3rd Street
5. Iowa Avenue/Blaine St	6. Rustin Ave/Blaine St	7. Canyon Crest Dr/Blaine St	8. Watkins Dr/Blaine St
9. Iowa Avenue/Linden St	10. Canyon Crest Dr/Linden St	11. Aberdeen Dr/Linden St	12. Iowa Avenue/University Avenue

			PM	52.2	F	52.2	F	+0.0	No

Notes:

1. Delay is calculated using Synchro HCM 6<sup>th</sup> Edition Methodology, except for Intersection 10 where HCM 2000 is used due to the presence of a pedestrian scramble phase.
2. **Bold** type indicates an unacceptable LOS based on the City's significance criteria.
3. AWSC indicates that this is an all-way stop control where all approaches have stop signs.

## FREEWAY ANALYSIS

Operations analysis for the freeway facilities in the study area is summarized in **Table 10**. Under Existing (2017) Plus Phase 1 conditions, the following locations were found to operate at LOS E or LOS F:

- Northbound Diverge at University Avenue (AM peak hour)
- Northbound Merge at Blaine Street (AM peak hour)

**TABLE 10 – EXISTING PLUS PHASE 1 FREEWAY OPERATIONS**

Location	Segment Type	Existing				Existing Plus Phase 1			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS	Density	LOS	Density	LOS
<b>Northbound I-215</b>									
Diverge at University Avenue	Weave	37	E	28	C	37	E	28	D
Merge at University Avenue	Weave	25	C	20	B	25	C	20	C
Diverge at Blaine Street	Weave	25	C	20	B	25	C	20	C
Merge at Blaine Street	Weave	-	F	25	C	-	F	26	C
<b>Southbound I-215</b>									
Diverge at Blaine Street	Weave	16	B	22	C	16	B	22	C
Merge at Blaine Street	Weave	11	B	24	C	11	B	24	C
Diverge at University Avenue	Weave	11	B	24	C	11	B	24	C
Merge at University Avenue	Weave	10	B	30	D	11	B	31	D

Notes:

1. Density is reported in vehicles per lane per mile.
2. The maximum density for ramp junctions and weaving sections under LOS E is not defined in the HCM.
3. The maximum density for basic segments of 45 vplpm was assumed to apply to ramp junctions and weaving sections.

## Queuing

Queueing results for the Existing Plus Phase 1 conditions are summarized in **Table 11** below. As shown in the table, queuing was not found to exceed storage at any ramp terminal intersection.

**TABLE 11 – EXISTING PLUS PHASE 1 QUEUING ANALYSIS**

Intersection		Ramp length (ft)	Move	Length (ft)	Existing		Existing Plus Phase 1	
					AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
					Lane (ft)	Lane (ft)	Lane (ft)	Lane (ft)
3	I-215 SB & 3rd Street	1,431	SBTL	1,430	550	252	559	267

14	I-215 NB & University Avenue	1,990	SBL	750	25	30	27	36
			SBR	1,990	57	52	57	55 [a]

Notes: [a] 95<sup>th</sup> percentile volume exceeds capacity. Queues may be longer.

## 6.0 FUTURE (2025) CONDITIONS

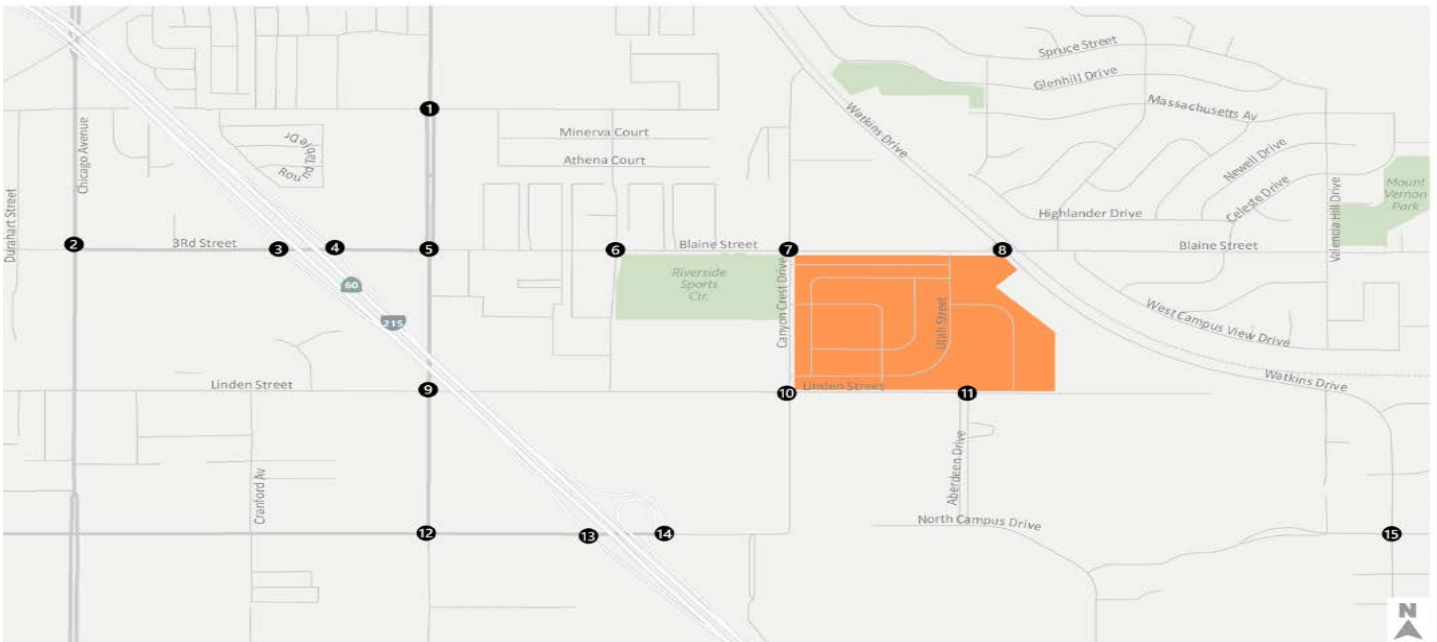

This chapter summarizes the Future (2025) Conditions as outlined in Chapter 3. The traffic forecasts and operations analysis for this scenario reflect eight years growth derived from RivTAM without the Project. The Future (2025) Conditions traffic forecasts are shown on **Figure 10**.

### PLANNED INTERSECTION IMPROVEMENTS

No roadway improvements are assumed to be in place by buildout of the Project, which will occur by 2025. Traffic signal timing adjustments are considered standard maintenance for local and state agencies and it is assumed that the owner/operators of the study intersections would regularly optimize the traffic signals depending on the traffic volumes in the study area. Therefore, signal timing was optimized under Future (2025) conditions.

### INTERSECTION OPERATIONS

The intersection results for Future (2025) conditions without the Project are summarized in **Table 12**. As shown, two intersections were identified as operating unacceptably by 2025: 1) Third Street & Chicago Avenue and 2) Watkins Drive & Big Springs Road.

1. Iowa Avenue/Massachusetts Ave	2. Chicago Avenue/3rd St	3. I-215 SB/3rd St	4. I-215 NB/3rd St
5. Iowa Avenue/Blaine St	6. Rustin Ave/Blaine St	7. Canyon Crest Dr/Blaine St	8. Watkins Dr/Blaine St
9. Iowa Avenue/Linden St	10. Canyon Crest Dr/Linden St	11. Aberdeen Dr/Linden St	12. Iowa Avenue/University Avenue

2. **Bold** type indicates an unacceptable LOS based on the City's significance criteria.
3. AWSC indicates that this is an all-way stop control where all approaches have stop signs.

## FREEWAY ANALYSIS

The operations analysis for the freeway facilities in the study area is summarized in **Table 13**. Under Future (2025) conditions, the following locations were found to operate at LOS E or LOS F:

- Northbound Diverge at University Avenue (AM peak hour)
- Northbound Merge at Blaine Street (AM peak hour)
- Southbound Diverge at Blaine Street (AM peak hour)

**TABLE 13 – FUTURE (2025) FREEWAY OPERATIONS**

Location	Segment Type	Future (2025)			
		AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS
<b>Northbound I-215</b>					
Diverge at University Avenue	Weave	-	F	28	C
Merge at University Avenue	Weave	30	D	21	C
Diverge at Blaine Street	Weave	30	D	21	C
Merge at Blaine Street	Weave	-	F	27	C

## 7.0 FUTURE (2025) PLUS BUILDOUT PROJECT CONDITIONS

This chapter summarizes the Future (2025) Plus Buildout Project Conditions within the study area.

### TRAFFIC VOLUMES

Traffic volumes for the Future (2025) Plus Buildout Project Conditions scenario consist of volumes from the Future (2025) Conditions plus volumes generated by the proposed Project as described in Chapter 3. However, as the Project will provide housing for 6,000 students at Buildout, adjustments were made to the 2025 traffic forecasts to account for a shift of students from commuter students (students living off campus and commuting to campus) to resident students (students living on campus at the Project site).

To determine the appropriate shift from commuter student to resident student, the number of trips generated by the 6,000 commuter students was developed using trip generation rates from the UC Riverside LRDP, consistent with rates used for resident student trip generation. Based on the rates documented in the LRDP, one commuter student generates 0.08 trips during the AM peak hour and 0.068 trips during the PM peak hour. Based on those trip generation rates, 6,000 students would generate 480 AM peak hour trips and 408 PM peak hour trips. As those trips are accounted for in the trip generation for Buildout of the Project, routes into campus and out of campus were identified and manually adjusted based on the commuter student trips generated by those students. This adjustment ensures that the resident students were not accounted for twice in the Buildout Plus Project traffic forecasts.

Adjustments were made along the following paths to and from Campus:

- University Drive
- Canyon Crest Drive
- 3<sup>rd</sup> Street/Blaine Street
- Watkins Drive
- Big Springs Road

Traffic volumes and lane configurations for Future (2025) Plus Buildout Project conditions are shown on **Figure 11**.

## ROADWAY IMPROVEMENTS

Future (2025) Plus Buildout Project intersection lane configurations are assumed to include the same lane geometries as Future (2025) Conditions.

## INTERSECTION OPERATIONS

**Table 15** summarizes the LOS and delay for the study intersections under Future (2025) Plus Buildout Project conditions. The following intersections were found to operate unacceptably under this scenario:

- 2) Third Street & Chicago Avenue – LOS E during the AM and PM peak hours
- 5) Iowa Avenue & Blaine Street – LOS E during the AM and PM peak hours
- 11) Aberdeen Drive & Linden Street – LOS E during the PM peak hour
- 12) University Avenue & Iowa Avenue- LOS E during the PM peak hour
- 15) Watkins Drive & Big Springs Road – LOS F during the AM and PM peak hours

All other study intersections operate acceptably at LOS D or better during both peak hours.

## INTERSECTION IMPACTS

When compared to the significance thresholds outlined in Chapter 3, the Project results in the following impacts under Future (2025) Plus Buildout Project conditions:

- 2) Third Street & Chicago Avenue
- 5) Iowa Avenue & 3<sup>rd</sup> Street
- 7) Canyon Crest Drive & Blaine Street
- 9) Iowa Avenue & Linden Street
- 10) Canyon Crest Drive & Linden Street
- 11) Aberdeen Drive & Linden Street
- 12) Iowa Avenue & University Avenue
- 15) Watkins Drive & Big Springs Road

				PM	28.7	C	44.1	D	+15.4	<b>Yes</b>
11	Aberdeen Drive & Linden Street	UC Riverside	AWSC	AM	9.3	A	11	B	+1.7	No
				PM	14.2	B	<b>46.3</b>	<b>E</b>	+32.1	<b>Yes</b>
12	Iowa Avenue & University Avenue	City of Riverside	Signal	AM	19.3	B	19.7	B	+0.4	No
				PM	51.1	D	<b>60.1</b>	<b>E</b>	+9.0	<b>Yes</b>
13	I-215 SB & University Avenue	Caltrans	Signal	AM	27.7	C	23.8	C	-3.9	No
				PM	12.7	B	13	B	+0.3	No
14	I-215 NB & University Avenue	Caltrans	Signal	AM	11.6	B	13.3	B	+1.7	No
				PM	12.6	B	14.4	B	+1.8	No
15	Watkins Drive & Big Springs Road	City of Riverside	AWSC	AM	<b>91.7</b>	<b>F</b>	<b>102.3</b>	<b>F</b>	+10.6	<b>Yes</b>
				PM	<b>72.0</b>	<b>F</b>	<b>106.6</b>	<b>F</b>	+34.6	<b>Yes</b>

Notes:

1. Delay is calculated using Synchro HCM 6<sup>th</sup> Edition Methodology, except for Intersection 10 where HCM 2000 is used due to the presence of a pedestrian scramble phase.
2. **Bold** type indicates an unacceptable LOS based on the City's significance criteria.
3. AWSC indicates that this is an all-way stop control where all approaches have stop signs.

## FREEWAY ANALYSIS

The operations analysis for the freeway facilities in the study area is summarized in **Table 16**. Under Future Plus Buildout (2025) conditions, the following locations were found to operate at LOS E or LOS F:

- Northbound Diverge at University Avenue (AM peak hour)
- Northbound Merge at Blaine Street (AM peak hour)
- Southbound Diverge at Blaine Street (AM peak hour)

**TABLE 16 – FUTURE (2025) PLUS BUILDOUT PROJECT FREEWAY OPERATIONS**

Location	Segment Type	Future (2025)				Future + Buildout			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS	Density	LOS	Density	LOS
<b>Northbound I-215</b>									
Diverge at University Avenue	Weave	-	F	28	C	-	F	-	F
Merge at University Avenue	Weave	30	D	21	C	29	D	21	C
Diverge at Blaine Street	Weave	30	D	21	C	29	D	21	C
Merge at Blaine Street	Weave	-	F	27	C	-	F	-	F
<b>Southbound I-215</b>									
Diverge at Blaine Street	Weave	-	F	22	C	-	F	22	C
Merge at Blaine Street	Weave	17	B	25	C	17	B	25	C
Diverge at University Avenue	Weave	17	B	25	C	17	B	25	C
Merge at University Avenue	Weave	16	B	33	D	16	B	16	B

Notes:

1. Density is reported in vehicles per lane per mile.
2. The maximum density for ramp junctions and weaving sections under LOS E is not defined in the HCM.
3. The maximum density for basic segments of 45 vplpm was assumed to apply to ramp junctions and weaving sections.

## Queuing

Queuing results for Future (2025) Plus Buildout Project conditions are summarized in **Table 17** below. As shown, queuing is not expected to exceed storage capacity for any movements under Buildout (2025) conditions.

**TABLE 17 – FUTURE (2025) QUEUING ANALYSIS**

Intersection	Ramp length (ft)	Movement	Length (ft)	Future (2025)		Future (2025) Plus Buildout Project	
				AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
				Lane (ft)	Lane (ft)	Lane (ft)	Lane (ft)
3 I-215 SB & 3rd Street	1,431	SBTL	1,430	671	401	703	454
		SBR	920	267	38	314	38

## 11.0 SITE PLAN REVIEW

This chapter provides an overview of the Project site plan, related to internal and external circulation for the Project. Considerations include site access, parking, and on-site circulation.

### ON-SITE CIRCULATION

On-site circulation will be provided by a series of multi-modal paths connecting the buildings located on the Project site to the internal parking structures and adjacent street network. Two paths will provide north/south circulation through the site, including access to the North Parking Area and Blaine Street driveway. Another path will provide east/west connectivity across the site, including access to the South Parking Area and the Watkins Street driveway.

### PROJECT SITE ACCESS

#### VEHICLE ACCESS

Access to the Project is provided by three full access driveways. The driveways will access the site from Linden Street, Blaine Street, and Watkins Drive. The driveways from Watkins Drive and Linden Street will provide access to the East Parking Area, while the Blaine Street driveway will provide access to the North Parking Area.

#### EMERGENCY VEHICLE ACCESS

Another consideration related to the Project site plan review is the provision of adequate emergency vehicle access. Providing adequate emergency vehicle access ensures that these vehicles are able to quickly respond to service calls. Direct emergency access will be provided to all buildings. Emergency access will be provided by the surrounding streets and the multi-modal paths throughout the project site. All multi-modal paths will be designed to meet the requirements for emergency vehicle access.

#### PEDESTRIAN ACCESS

The Project provides pedestrian access to buildings on site, parking areas, and the Campus through a system of walkways and plazas to create a pedestrian friendly environment. The network of off-street paths will be designated as shared walkways and bikeways. Under Phase 1, one north/south walkway will be provided from the Blaine Street driveway to Linden Street and one east/west walkway will be provided from the Watkins Street driveway to the project boundary. Under Buildout conditions, the east/west walkway will be

extended to Canyon Crest Drive and an additional north/south walkway will be added, providing a connection to the planned North Recreational Mall.

## BICYCLE ACCESS

Along with pedestrian facilities, the Project will encourage the use of bicycling as an active and sustainable mode of transportation. Access to the Project site from surrounding streets is provided by shared facilities on the Blaine Street and Watkins Street driveways. Access from Campus is provided by the Class IV facility that will connect to the planned North Recreational Mall.

## TRANSIT ACCESS

Transit facilities are currently located on Blaine Street and Canyon Crest Drive. UC Riverside is currently in the process, with cooperation from RTA, of creating a Mobility Hub on Campus to provide a central location for all transit and other pick-up/drop-off trips to and from Campus. The planned Mobility Hub will be located at the Canyon Crest Drive/University Avenue intersection and will be accessible from the Project by the planned connection to the North Recreational Mall.

## PARKING

The Project will provide parking in two areas, the North Parking Area and the South Parking Area. Under Phase 1, both areas will be developed as surface parking providing 775 total spaces. The North Parking Area will provide 451 spaces under Phase 1, while the South Parking Area will provide 324 parking spaces. Two other surface lots will also be provided to serve the UC Riverside Child Development Center, which is located adjacent to the site (69 parking spaces).

Under Buildout conditions, parking structures will be constructed on the surface parking lots to provide 2,164 total spaces with no more than 1,200 spaces in either structure.

Bicycle parking will also be provided, including inside buildings and in secure outdoor parking facilities throughout the site.

## 12.0 IMPACTS & MITIGATION MEASURES

This chapter reviews project related impacts on the transit system, bicycle and pedestrian network in the study area. Potential impacts include disruptions on existing facilities, interference with planned facilities, and conflicts with adopted plans, guidelines, policies, or standards relating to pedestrians, bicycles and transit.

### PEDESTRIAN NETWORK

#### DISRUPTIONS TO EXISTING FACILITIES

##### **Significance Criteria**

The following significance criteria were applied:

A significant impact occurs if a project disrupts existing pedestrian facilities. This can include adding new vehicular, pedestrian, or bicycle traffic at locations experiencing pedestrian safety concerns such as an adjacent crosswalk or school, particularly if the added traffic reduces the number of pedestrian acceptable gaps at an unsignalized crossing or causes queues to spillback through pedestrian crossings.

##### **Project Impact**

A review of the project per the significance criteria described indicates that there are no conflicts with existing pedestrian facilities. Therefore, no significant impact occurs.

#### PROJECT INTERFERES WITH PLANNED PEDESTRIAN FACILITIES

##### **Significance Criteria**

The following significance criteria were applied to determine if the project conflicts with planned facilities:

A significant impact occurs if a project interferes with pedestrian facilities. In existing or planned urbanized areas, main streets or pedestrian districts, this can include impacts to the quality of the walking environment.

### **Project Impact**

No conflicts with any planned pedestrian facilities that would be affected by the project. Therefore, no significant impact occurs.

### **PROJECT CONFLICTS WITH ADOPTED PEDESTRIAN SYSTEM PLANS, GUIDELINES, POLICIES, OR STANDARDS**

#### **Significance Criteria**

A significant impact occurs if a project conflicts or creates inconsistencies with adopted pedestrian system plans, guidelines, policies, or standards.

### **Project Impact**

Similar to bicycling, the City of Riverside General Plan contains several references to pedestrians in the policy statements including:

- Policy CCM-10.2: Incorporate bicycle and pedestrian trails and bicycle racks in future development projects
- Policy CCM-10.5: Promote the health benefits of using a bicycle or walking as a means of transportation
- Policy CCM-10.6: Encourage pedestrian travel through the creation of sidewalks and street crossings

The project is entirely consistent with these policy statements through the implementation of facilities which would contain pedestrian walkways in addition to any bicycle facilities. The project also restricts vehicular traffic within several areas of the Campus east of Iowa Avenue to promote pedestrian travel. Therefore, it is concluded that the project impact related to this item is less than significant.

## **BICYCLE NETWORK**

### **DISRUPTIONS TO EXISTING FACILITIES**

#### **Significance Criteria**

The following significance criteria were applied:

A significant impact occurs if a project disrupts existing bicycle facilities.

### **Project Impact**

As noted in the review of existing facilities, there are several bicycle routes within the study area. It is anticipated that the project would not affect the operation of any of these existing facilities. Therefore, no significant impact would occur.

## **PROJECT INTERFERES WITH PLANNED BICYCLE FACILITIES**

### **Significance Criteria**

The following significance criteria were applied to determine if the project conflicts with planned facilities:

A significant impact occurs if a project interferes with planned bicycle facilities. This includes failure to dedicate right-of-way for planned on- and off-street bicycle facilities included in an adopted Bicycle Master Plan or to contribute towards construction of planned bicycle facilities along the project frontage.

### **Project Impact**

Based on the review of available documents, the project will provide connections to planned facilities in the study area; therefore, the impact is less than significant.

## **PROJECT CONFLICTS WITH ADOPTED BICYCLE SYSTEM PLANS, GUIDELINES, POLICIES, OR STANDARDS**

### **Significance Criteria**

The following significance criteria were applied to determine if the project conflicts with planned facilities:

A significant impact occurs if the project conflicts or creates inconsistencies with adopted bicycle system, plans, guidelines, policies, or standards.

## **Project Impact**

The City of Riverside General Plan contains several policy statements related to bicycles including:

- Policy CCM-10.2: Incorporate bicycle and pedestrian trails and bicycle racks in future development projects
- Policy CCM-10.5: Promote the health benefits of using a bicycle or walking as a means of transportation
- Policy CCM-10.12: Encourage bicycling as a commute mode to school, work, etc.

The proposed project incorporates numerous measures which are consistent with the policies outlined above. For example, the Project proposes both extensive bicycle and pedestrian facilities. The Project is also proposed to include bicycle racks, and bicycle storage in all buildings to promote active transportation. Therefore, it is concluded that there is no conflict with these policy statements. Therefore, no significant impact occurs.

## **TRANSIT SYSTEM**

### **DISRUPTIONS TO EXISTING TRANSIT SERVICE**

#### **Significance Criteria**

The following significance criteria were applied to determine if the project is responsible for a disruption of existing transit services or facilities:

A significant impact occurs if a project or project-related mitigation disrupts existing transit services or facilities. This includes disruptions caused by proposed project driveways on transit streets and impacts to transit stops/shelters; and impacts to transit operations from traffic improvements proposed or resulting from a project.

#### **Project Impact**

As noted in the review of existing transit routes, there are a number of routes which currently run through and around the campus. From the review of the proposed land use changes, it can be concluded that none of the proposed land use configurations would significantly disrupt any of the existing transit routes. Therefore, the impact is less than significant.

## INTERFERENCE WITH PLANNED TRANSIT SERVICES

### **Significance Criteria**

The following significance criteria were applied:

A significant impact occurs if a project interferes with planned transit services or facilities.

### **Project Impact**

This project would not interfere with the planned Campus Mobility Hub, which is planned to be developed at the University Avenue/Canyon Crest Drive intersection; therefore, no significant impact is expected to occur.

## PROJECT CONFLICTS OR CREATES INCONSISTENCIES WITH ADOPTED TRANSIT SYSTEM PLANS, GUIDELINES, POLICIES, OR STANDARDS

### **Significance Criteria**

The following significance criteria regarding consistency with adopted transit plans, guidelines, policies, or standards were applied:

A significant impact occurs if a project conflicts or creates inconsistencies with adopted transit system plans, guidelines, policies, or standards.

### **Project Impact**

Based on the review of the proposed project, it can be concluded that the project does not conflict with these policies or other policies related to transit. The impact is therefore less than significant, and no mitigation is required.

## DEMAND FOR PUBLIC TRANSIT SERVICES ABOVE CAPACITY

### **Significance Criteria**

The following significance criteria were applied:

A significant impact occurs if the project creates demand for public transit service above the capacity which is provided or planned.

## Project Impact

As the Project will transition students from commuter students to residential students, it is anticipated that the Project would contribute to a decrease in student commuters utilizing transit to commute to Camps. Therefore, no significant impact is anticipated to occur.

## ROADWAY NETWORK

Mitigation measures for the Existing Plus Project and Future (2025) Project scenario are summarized below.

### EXISTING PLUS PROJECT

The impacts identified for the Existing Plus Project scenario are summarized in **Table 18**. Mitigation measures identified for the impacted intersection are summarized below.

**TABLE 18 – EXISTING PLUS PHASE 1 MITIGATION SUMMARY**

Intersection	Jurisdiction	Control	Peak Hour	Existing Plus Phase 1		Existing Plus Phase 1 Mitigation		Significant Impact
				Delay	LOS	Delay	LOS	
15 Watkins Drive & Big Springs Road	City of Riverside	AWSC	AM	60.2	F	13.0	B	Yes
			PM	52.2	F	12.0	B	No

#### 15) Big Springs Road & Watkins Drive

**Impact:** With the addition of Phase 1 vehicle-trips, this intersection operates at LOS F during the AM peak hour. As delay is increased by more than 1.0 seconds, a significant impact occurs based on the City's significance thresholds.

**Mitigation:** As this intersection does not meet signal warrants under existing conditions or with the development of Phase 1, mitigating this impact would require reconfiguring the intersection to a single-lane roundabout. Under roundabout control, this intersection would operate acceptably at LOS B during both the AM and PM peak hours.

While this mitigation measure is considered feasible and would improve intersection operations, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

**FUTURE (2025) PLUS BUILDOUT PROJECT**

The impacts identified for the Future (2025) Plus Buildout Project scenario are summarized in **Table 19**. Mitigation measures identified for the impacted intersections are summarized below.

**TABLE 19 – FUTURE (2025) PLUS BUILDOUT PROJECT MITIGATION SUMMARY**

	Intersection	Jurisdiction	Control	Peak Hour	Future Plus Buildout Project		Future Plus Buildout Project with Mitigation		Significant Impact
					Delay	LOS	Delay	LOS	
2	Chicago Avenue & 3rd Street	City of Riverside	Signal	AM	<b>61.4</b>	<b>E</b>	41.3	D	<b>Yes</b>
				PM	<b>68.1</b>	<b>E</b>	53	D	<b>Yes</b>
5	Iowa Avenue & Blaine Street	City of Riverside	Signal	AM	<b>57.6</b>	<b>E</b>	42.8	D	<b>Yes</b>
				PM	<b>62.5</b>	<b>E</b>	49.7	D	<b>Yes</b>
7	Canyon Crest Drive & Blaine Street	City of Riverside	Signal	AM	35.5	D	29.2	C	<b>Yes</b>
				PM	33.1	C	20.2	C	<b>Yes</b>
9	Iowa Avenue & Linden Street	City of Riverside	Signal	AM	27.4	C	32.8	C	No
				PM	24.4	C	24.5	C	<b>Yes</b>
10	Canyon Crest Drive & Linden Street	City of Riverside	Signal	AM	23.7	C	9.6	A	No
				PM	44.1	D	17.4	C	<b>Yes</b>
11	Aberdeen Drive & Linden Street	UC Riverside	AWSC	AM	11.0	B	11.8	B	No
				PM	<b>46.3</b>	<b>E</b>	20.2	C	<b>Yes</b>
12	Iowa Avenue & University Avenue	City of Riverside	Signal	AM	19.7	B	9.6	A	No
				PM	<b>60.1</b>	<b>E</b>	17.4	C	<b>Yes</b>
15	Watkins Drive & Big Springs Road	City of Riverside	AWSC	AM	<b>102.3</b>	<b>F</b>	15.0	C	<b>Yes</b>
				PM	<b>106.6</b>	<b>F</b>	13.0	B	<b>Yes</b>

2) Third Street & Chicago Avenue

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS E during both the AM and PM peak hours. As delay is increased by more than 2.0 seconds under the Plus Project scenario, a significant impact occurs based on the City’s significance thresholds.

**Mitigation:** Mitigating this impact would require reconfiguring the northbound and southbound intersection approaches to provide a dedicated northbound right-turn pocket with 200 feet of storage and a dedicated southbound right-turn pocket with 200 feet of storage, along with optimizing signal timing. With the mitigation in place, the northbound and southbound approaches would provide a dedicated left-turn lane, two through lanes, and a dedicated right-turn lane. As bicycle facilities are not provided on

Chicago Avenue in this area and the improvements could be accommodated within the existing cross-section, this mitigation would not impact bicyclists or pedestrians.

While this mitigation measure is considered feasible and would improve intersection operations, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

5) Iowa Avenue & Blaine Street

**Impact:** With the addition of the Project under Buildout conditions, this intersection is degraded from acceptable operations (LOS D) to unacceptable operations (LOS E), causing a significant impact to occur based on the City's significance thresholds.

**Mitigation:** Mitigating this impact would require the addition of a southbound left-turn lane and reconfiguring the northbound approach to provide a dedicated right turn-lane with 200 feet of storage. Optimizing signal-timings with the geometric improvements would also be required to mitigate this impact.

7) Canyon Crest Drive & Blaine Street

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS D during the AM peak hour and LOS C during the PM peak hour. The impact occurs based on the increase in delay with the project (8 seconds during the AM, and 18 seconds during the PM peak hour) exceeding the City's significance criteria for intersections operating at LOS D and LOS C.

**Mitigation:** Mitigating this impact would require converting the eastbound approach from the current configuration with a left-turn lane, a through lane, and a shared through-right lane to having a left-turn lane, two through lanes, and a dedicated right-turn lane. While these improvements could be implemented within the existing right-of-way, they would require removal of the existing Class II bike lane on Linden Street, creating a secondary impact to bicyclists.

In addition to the secondary impacts that would occur as a result of removing a Class II bike lane, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

9) Iowa Avenue & Linden Street

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS C during the AM peak hour and LOS D during the PM peak hour. As delay during the PM peak hour is increased by more than 5.0 seconds with the Project in place, an impact occurs based on the City's significance thresholds.

**Mitigation:** Mitigating this impact can be achieved by retiming the signal to better serve movements with higher delay. While this mitigation measure is considered feasible and would improve intersection operations, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

10) Canyon Crest Drive & Linden Street

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS C during the AM peak hour and LOS D during the PM peak hour. As delay under with Project conditions is increased by more than 5.0 seconds, an impact is triggered based on the City's significance thresholds.

**Mitigation:** Mitigating this impact would require the addition of a dedicated eastbound right-turn lane with 150 feet of storage. This would reconfigure the eastbound approach to provide a dedicated left-turn lane, a through lane, and a dedicated right-turn lane. Currently, a Class II bike lane is provided along Linden Street. As the mitigation measure would require removing striping for the bike lane, this would result in a secondary impact to bicyclists.

In addition to the secondary impacts that would occur as a result of removing a Class II bike lane, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

### 11) Aberdeen Drive & Linden Street

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS B during the AM peak hour and LOS E during the PM peak hour. As the intersection is degraded from acceptable operations (LOS D or better) to unacceptable (LOS E) with buildout of the Project during the PM peak hour, an impact occurs based on the City's significance thresholds.

**Mitigation:**

This intersection is expected to experience high bicyclist and pedestrian volumes with buildout of the Project as well as other planned housing and campus growth expected by 2025 in the area. Based upon the site access assumed under buildout conditions as part of this study, intersection signalization with a pedestrian only phase could be considered as an ultimate improvement at this intersection. With a traffic signal in place, the intersection operations are improved to LOS C during the PM peak hour under Buildout conditions. This improvement would require the addition of marked crosswalks, pedestrian scramble markings and a four-phase signal. However, as the traffic volumes and pedestrian flows at this intersection are highly dependent on the final site plan and site access configuration, the need for signalization should be reexamined once Phase 1 is complete and operational, and the remaining phases of the project are under final design. The need for a traffic signal should be based on existing and projected traffic volumes and bicycle and pedestrian crossings during peak travel hours upon project Buildout.

As the intersection is within the Campus and thus controlled by UC Riverside, this impact is considered less than significant.

**Significance after Mitigation:** *Less Than Significant*

### 12) University Avenue & Iowa Avenue

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS B during the AM peak hour and LOS D during the PM peak hour. As the intersection is degraded from acceptable operations (LOS D or better) to unacceptable operations (LOS E) during the PM peak hour an impact occurs based on the City's significance thresholds.

**Mitigation:** Mitigating this impact would require reconfiguring the southbound approach to provide a dedicated right-turn lane with 150 feet of dedicated storage. With the mitigation in place, the southbound approach would provide a dedicated left-turn lane, two through lanes, and a dedicated right-turn lane.

These mitigations could be accommodated within the existing right-of-way; however, the existing Class II bicycle lane could not be accommodated with the improvements, creating a secondary impact for bicyclists.

In addition to the secondary impacts that would occur as a result of removing a Class II bike lane, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

15) Big Springs Road & Watkins Drive

**Impact:** With the addition of the Project under Buildout conditions, this intersection operates at LOS F during both the AM and PM peak hours. As delay is increased by more than 1.0 seconds, a significant impact occurs based on the City's significance thresholds.

**Mitigation:** As this intersection does not meet signal warrants under this scenario, mitigating this impact would require reconfiguring the intersection to a single-lane roundabout. Under roundabout control, this intersection would operate acceptably at LOS C during the AM peak hour and LOS B during the PM peak hour.

While this mitigation measure is considered feasible and would improve intersection operations, UC Riverside does not have jurisdictional control over the identified intersection. As the intersection is controlled by the City of Riverside, any physical improvements would require agreement from the City and as the implementation of the identified mitigation cannot be guaranteed, this impact is found to be significant and unavoidable.

**Significance after Mitigation:** *Significant and Unavoidable*

## 13.0 VEHICLE MILES OF TRAVEL (VMT)

As a result of Senate Bill 743 (SB 743), the new recommended metric in the draft CEQA guidelines for transportation impacts is VMT per capita. Since the update to the CEQA guidelines is not yet final, a traditional LOS analysis has been completed for the study area. The VMT assessment is provided for informational purposes to meet the intention of SB 743 guidelines.

The California Governor's Office of Planning and Research (OPR) Proposed CEQA guidelines are documented below. Guidelines from the Proposed CEQA Guidelines Section 115064.3 are:

- **Land Use Projects:** Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be considered to have a less than significant transportation impact.
- **Transportation Projects:** Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, a lead agency may tier from that analysis as provided in Section 15152.

When a transportation impact is evaluated, the recommended significance criteria is:

- The project-generated VMT would be considered significant if the VMT per household, service population, or commuter student, as applicable, does not meet the state recommended threshold of 15% less than the existing regional or citywide VMT per household, service population or commuter student.

For both the Existing Plus Phase 1 and Buildout scenarios, the Project is expected to reduce VMT due to the fact that the new student housing would eliminate the "commute trip" because commuter students would instead reside on campus and be close to academic as well as other support uses. In addition, the mixed-use amenities on the Project site would provide local retail and dining options for the residents under Buildout conditions.

While a VMT impact is not expected and the Project could likely be screened out of requiring a VMT analysis under SB 743 guidance, VMT metrics were compiled with the RivTAM model to compare the Project to Citywide VMT characteristics in Riverside. The metric for assessing VMT impacts that was identified as most appropriate for this project is the Home-Based Work and the Home-Based Other production trip lengths.

**Table 20** summarizes the VMT impact assessment and the comparison between the Citywide VMT per service population and the Project VMT per service population.

**TABLE 20 – PROJECT VMT IMPACT ASSESSMENT**

<b>VMT per Service Population</b>	<b>2012 (Model Baseline)</b>	<b>Existing (2017)</b>	<b>2025 (Project Buildout)</b>
Riverside	7.7	7.4	7.0
Project	2.1	1.9	1.6

As shown, VMT per service population in 2025 for the Project is 77 percent lower than VMT per service population for the City of Riverside. As the threshold for a VMT impact is 15 percent lower than the citywide VMT, no impact occurs under 2025 conditions.

## **APPENDIX A: TRAFFIC COUNTS**

# National Data & Surveying Services Intersection Turning Movement Count

**Location:** Chicago Ave & 3rd St  
**City:** Riverside  
**Control:** Signalized

**Project ID:** 17-06180-001

Intersection Summary

HCM 6th Ctrl Delay	28.7
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.  
 \* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	29.4
HCM 6th LOS	C

Notes

- User approved pedestrian interval to be less than phase max green.
- \* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
- Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	41.2
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.  
 \* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	20.4
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.  
Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	43.7
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.  
 \* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	39.8
HCM 6th LOS	D

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

WTP	Water Treatment Plant

## **EXECUTIVE SUMMARY**

A California Environmental Quality Act (CEQA) report is being prepared on behalf of the City of Riverside's water utility Riverside Public Utilities (RPU) in support of the North District Development Project (NDDP or Project). The EIR includes an assessment of utilities, including water supply. Recent legislation, Senate Bill 610, requires that a water supply assessment (WSA), based on specific criteria, be prepared to document the sufficiency of available water supply for the RPU and the Project. The WSA identifies water supply and reliability to the City and the Project both now and in the future.

The WSA is considered at a point in time when known future projects are considered. It is also understood that new and innovative programs and projects in concept are yet to be designed. Therefore, WSAs are a part of the ongoing planning efforts of the RPU and the City to optimize its water resource program.

The WSA includes a discussion of the relevant legislation which requires the WSA; an overview of the proposed Project; analysis of water demands for RPU's existing service area and the Project over a 20-plus year planning period; and an analysis of reliability of RPU's water supplies. This WSA includes discussion of the potential impacts supplying agencies have on RPU's water system, and concludes with a sufficiency analysis of water supply during normal, single-dry, and multiple dry years over a 20-plus year planning period.

### **North District Development Project (NDDP)**

The NDDP is a proposed development component of the University of California at Riverside (UCR) campus. The NDDP project site is located in the northern portion of campus and generally bounded by Linden Street to the south, Canyon Crest Drive to the west, Blaine Street to the north, and Watkins Drive to the east. The 51-acre site is currently occupied by low density housing and other UCR uses which will either remain or be relocated. The proposed Project includes an Events Center, 7,300 beds for student housing, and college mixed use districts.

### **Water Supply**

As described in RPU's 2015 Urban Water Management Plan (UWMP), the RPU relies primarily on RPU-produced groundwater sources. Other sources include imported water and recycled water.

- The majority of the groundwater supply is from the Bunker Hill Basin, with supplemental groundwater sources from the Rialto-Colton Basin, and North and South Riverside subbasins. Under the Western-San Bernardino Judgment, RPU has a base extraction right from the Bunker Hill Basin of 53,426 AFY. Active recharge of the Bunker Hill Basin has increased RPU's extraction rights to 55,263 AFY.
- Under the Western-San Bernardino Judgment, RPU has a total extraction right from the Rialto-Colton Basin of 2,728 AFY.
- Under the Western-San Bernardino Judgment, RPU has a base extraction right from the Riverside North subbasin of 10,902 AFY.
- Under the Western-San Bernardino Judgment, RPU has a base extraction right from the Riverside South subbasin of 16,880 AFY
- RPU has the right to purchase up to 30 cfs of SWP imported water from WMWD (21,700 AFY), pursuant to a 1986 agreement.

- The proposed WMWD/RPU recycled water project would provide conveyance capacity to deliver recycled water from the RWQCP to additional users in the RPU service area. It is anticipated that up to 6,170 AFY could be made available for RPU users in the future, after the Plant's commitment to Santa Ana River discharge flows for Orange County.

### **Water Demand**

The City's total water demand in Year 2015 was approximately 75,128 acre-feet per year (AFY). The Project water demand was accounted for in the future demand estimate of the 2015 UWMP by way of an additional future demand for the UCR of 3,300 AFY. The NDDP project net water demand is estimated to be 700 AFY, including 46 AFY for outdoor irrigation. The Project can use recycled water for all outdoor landscape irrigation depending on the feasibility of expanding recycled water conveyance facilities to UCR. Combined with the other UCR LRDP projects completed since the adoption of the 2015 UWMP, and currently-proposed UCR projects that were also included in the UWMP projections, the total additional water demand for UCR is anticipated to increase to 925 AFY, which is within the projected demand growth for UCR in the 2015 UWMP.

### **Demand and Supply Projections**

Development of the proposed NDDP is expected to begin in 2019. The NDDP and current Long Range Development projects planned for the UCR campus will not exceed RPU's projected water demands for the UCR campus in the 2015 UWMP. Continued water use reduction habits and increased well production from RPU's proposed local water capacity enhancement projects are anticipated to satisfy the RPU's overall water demand increase through Year 2040.

Analyses of normal, single-dry, and multiple-dry year scenarios also demonstrate RPU's ability to supply water to meet demand until year 2040 in all hydrologic conditions based on the Watermaster's current Basin Safe Yield capacity.

### **Water Supply Reliability**

Continued reliability of existing RPU water supplies for its customers, including UCR, is based on maintaining current groundwater management programs. Prevailing drought conditions throughout southern California will continue to challenge local water agencies. But these challenges are much greater for those relying on imported water supplies. RPU relies very little on imported water supplies. And, future conjunctive use of the local groundwater basins serving RPU will utilize surface and imported water supplies during off-peak seasons.

### **Conclusion**

The information included in this Water Supply Assessment is based on the Riverside Public Utilities 2015 UWMP, which describes groundwater production and local water supply that will satisfy the RPU's ability to serve the additional water demands of UCR's Long Range Development Plan, including the North District Development Project, both now and through Year 2040.

## 1.0 INTRODUCTION

A California Environmental Quality Act (CEQA) report is being prepared for the North District Development Project (NDDP or Project). The EIR includes an assessment of utilities, including water supply. Legislation implemented in 2002 (Senate Bill 610), requires that a water supply assessment (WSA), based on specific criteria, be prepared to document the sufficiency of available water supply for the City of Riverside's Public Utilities department (Riverside Public Utilities, RPU) and the Project. The WSA identifies water supply and reliability for the RPU department, now and into the future, and makes a determination regarding water supply sufficiency for the Project. The regional location of the Project is shown in **Exhibit 1**.

The Project is a proposed development component of the University of California at Riverside (UCR) campus. The NDDP is located at the north end of campus adjacent to Linden Street and Canyon Crest Drive. The 51.15-acre site currently consists of low density housing. The proposed Project includes an Events Center, 7,300 beds for student housing, and college mixed use districts.

The WSA is part of the ongoing planning efforts of the City of Riverside to optimize its water resource program. The WSA includes a discussion of the Senate Bill 610 legislation, an overview of the proposed Project, and analysis of water supply and demand for the City's service area with the Project and other concurrent City development projects over a 20-year planning period. The WSA also includes an analysis of reliability of the City's water supplies and water quality, and concludes with an analysis describing water supply during normal, single-dry, and multiple dry years over a 20-plus year planning period.

NDDP Regional Location

## 2.0 LEGISLATION

Due to the potential impact by the North District Development Project on current and future water supplies, the State of California, through SB 610, requires that a WSA be completed for the proposed development. The Project is proposed to student housing capacity for up to 7,300 beds, which exceeds the residential threshold for SB 610 of 500 dwelling units; therefore, preparation of a WSA is required to determine the sufficiency of water supply for the Project and the City's water customers, now and for a 20-year planning period. The following information outlines the requirements of SB 610.

### 2.1 SB 610 Water Supply Planning

Senate Bill (SB) 610 was implemented January 2002. SB 610 requires a development that qualifies as a "Project" under Water Code 10912 to be supported in CEQA documentation with a Water Supply Assessment report drafted to specifically identify the public water system that shall supply water to the project and analyze the availability and reliability of water supply to the development. The Water Supply Assessment is to include the following if applicable to the supply conditions:

1. Discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses.
2. Identification of existing water supply entitlements, water rights, or water service contracts secured by the purveying agency and water received in prior years pursuant to those entitlements, rights, and contracts.
3. Description of the quantities of water received in prior years by the public water system under the existing water supply entitlements, water rights or water service contracts.
4. Water supply entitlements, water rights or water service contracts shall be demonstrated by supporting documentation such as the following:
  - a. Written contracts or other proof of entitlement to an identified water supply.
  - b. Copies of capital outlay program for financing the delivery of a water supply that has been adopted by the public water system.
  - c. Federal, state, and local permits for construction of necessary infrastructure associated with delivering the water supply.
  - d. Any necessary regulatory approvals that are required in order to be able to convey or deliver the water supply.
5. Identification of other public water systems or water service contract holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts, to the same source of water as the public water system.
6. If groundwater is included for the supply for a proposed project, the following additional information is required:
  - a. Description of groundwater basin(s) from which the proposed project will be supplied. Adjudicated basins must have a copy of the court order or decree adopted and a description of the amount of groundwater the public water system has the legal right to pump. For non-adjudicated basins, information on whether the DWR has identified the basin as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of DWR that

- characterizes the condition of the basin, and a detailed description of the efforts being undertaken in the basin to eliminate the long-term overdraft condition.
- b. Description and analysis of the amount and location of groundwater pumped by the public water system for the past five (5) years from any groundwater basin from which the proposed project will be supplied. Analysis should be based on information that is reasonably available, including, but not limited to, historic use records.
  - c. Description and analysis of the amount and location of groundwater projected to be pumped by the public water system from any groundwater basin from which the proposed project will be supplied. Analysis should be based on information that is reasonably available, including, but not limited to, historic use records.
  - d. Analysis of sufficiency of the groundwater from the basin(s) from which the proposed project will be supplied.
7. The water supply assessment shall be included in any environmental document prepared for the project.
  8. The assessment may include an evaluation of any information included in that environmental document. A determination shall be made whether the projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses.

## **2.2 SBx7-7 and EO B-29-15**

The Water Conservation Act of 2009 (SBx7-7) requires all California urban water agencies to set and meet certain demand reduction targets in order to assist the State in reducing urban water use by 20 percent by 2020. The Act also requires each agency to monitor its progress toward its targets. This was implemented for the purpose of meeting the mandate to reduce per capita urban water consumption by 20 percent statewide. SBx7-7 describes the overall process by which the City of Riverside is to comply with the requirements. It specifically identifies methods for establishing urban water use targets. These requirements and the City of Riverside specific Compliance Plan are outlined in the 2010 UWMP.

The Governor issued a State of Emergency and Continued State of Emergency in 2014 in response to the persistent state-wide drought. Most recently, Executive Order B-29-15 was issued by the Governor in April 2015 which essentially increases the water use reduction goal to 25 percent as compared to 2013 usage throughout the State. The EO outlines specific water use reduction orders designed to heighten the urgency to reduce water consumption and facilitate the ability of local agencies to implement and enforce water conservation requirements. It addresses funding for projects designed to increase local water supplies and improve water supply reliability. It also orders more frequent reporting and modifications to the State's Model Water Efficient Landscape Ordinance; mandates Agricultural water suppliers to prepare their Agricultural Water Management Plans by specific dates; and orders the State to coordinate their water conservation related goals with other State departments like Fish and Wildlife, Forestry and Fire Protection, and the Energy Commission.

Additionally, the State Water Resources Control Board on May 5, 2015, adopted regulations implementing Executive Order B-29-15. Under this SWRCB regulation the City of Riverside is required to reduce its total potable water production by 36 percent for each month as compared to the amount used in the same month in 2013.

### 3.0 NORTH DISTRICT DEVELOPMENT PROJECT (NDDP) PROJECT

#### 3.1 Project Description

The North District Development Project (NDDP or Project) is a proposed development component of the University of California at Riverside (UCR) campus. The NDDP project site is generally bounded by Linden Street to the south, Canyon Crest Drive to the west, Blaine Street to the north, and Watkins Drive to the east, as shown in the aerial image of **Exhibit 3-1**. The 51.15-acre site currently consists of low-density housing. For the purposes of the WSA, the aerial image was used to determine unit count for an estimation of existing site water demands. **Exhibit 3-2** is a zoomed-in view of the image.

The NDDP site plan and proposed concept development is shown in **Exhibit 3-3**. The proposed Project includes an events center, up to 7,300 beds, 157,000 square feet of Mixed Use District, and open space, and parking, as outlined in **Table 1**.

**Table 3-1 - North District Development Project (MAXIMUM)**

Segment	Land Use	Acres <sup>[2]</sup>	Quantity <sup>[1]</sup>	
			quantity	Building Area
1	Student Residential 1	2.125	1,000 beds	
	Mixed Use District 1	2.125		15,000 sf

### 3.2 North District Development Project Water Demands

Table 3-2 calculates the total and net water demand of the Project.

**Table 3-2 - NDDP Water Demand Estimate**

**Existing<sup>[1]</sup>**

Segment	Existing Land Use	Acres <sup>[2]</sup>	Quantity <sup>[1]</sup>		Unit Factor <sup>[5]</sup>	Average
			units	Building Area		
-	Low Density housing	51.15	262 DUs	-	200 gpd/DU	52,400 gpd

**Proposed**

Segment	Proposed Land Use	Acres <sup>[3]</sup>	Quantity <sup>[2]</sup>		Unit Factor <sup>[5]</sup>	Average
			quantity	Building Area		
1	Student Residential 1	2.125	1,000 beds		80 gpcd	80,000 gpd
	Mixed Use District 1	2.125		15,000 sf	3,000 gpd/Ac	6,375 gpd
2	Student Residential 2	3.075	1,300 beds		80 gpcd	104,000 gpd
	Mixed Use District 2 Dining Commons	3.075 <sup>[4]</sup>		22,000 sf	3,000 gpd/Ac -	9,225 gpd -
3	Student Residential 3	2.725	1,400 beds		80 gpcd	112,000 gpd
	Mixed Use District 3	2.725		50,000 sf	3,000 gpd/Ac	8,175 gpd
4	Student Residential 4	4.2	2,600 beds		80 gpcd	208,000 gpd
	Mixed Use District 4	4.2		70,000 sf	3,000 gpd/Ac	12,600 gpd
5	Student Residential 5	1.7	1,000 beds		80 gpcd	80,000 gpd
	Mixed Use District 5	1.7		-	3,000 gpd/Ac	5,100 gpd
6	Events Center	5.7	7,000 seats	-	5 gal/seat <sup>[6]</sup>	9,973 gpd
7	Open Space	11.6	-	-	4 AF/Ac-Yr	41,426 gpd
8	Parking 1	2.15	-	-	-	-
9	Parking 2	4.05	-	-	-	-
<b>Total Proposed</b>		<b>51.15</b>	<b>7,300 beds</b>	<b>157,000 sf</b>		<b>676,874 gpd</b>
<b>Net Average Domestic Water Demand</b>						<b>624,474 gpd</b>
<b>Net Average Domestic Water Demand</b>						<b>700 AFY</b>

- [1] Based on manual count of structures using Google Earth.
- [2] Taken from NDDP Initial Study, June 2018. Based on maximum proposed buildout density.
- [3] Assumes 'residential' and 'mixed-use' split the total segment acreage equally.
- [4] Water demand for dining commons is included in the unit factor per student.
- [5] Unit factors are based on typical water usage in southern California for residential, college dormitories and mixed use land uses.
- [6] Water Demand for Events Center is based on average of two sold-out events per week.

Total average NDDP Project water demand is estimated at approximately, 676,474 gallons per day (gpd), which will replace existing uses estimated to have a domestic water demand of 52,400 gpd, based on dwelling unit count from Google Earth and assumed 2 persons per dwelling unit. Therefore, total net demand for the site is estimated at 624,474 gpd (434 gpm or 700 AFY).

RPU has adopted an ordinance titled *Mandatory Use of Recycled Water* that is designed to encourage recycled water use. As identified in the land uses of the Project, 11.6 acres is proposed as open space potentially for irrigation. This represents an opportunity to serve approximately 41,426 gpd from the City's recycled water sources.

## 4.0 RPU WATER DEMAND AND SUPPLIES

The City of Riverside Public Utilities department service area is located within the Santa Ana River Valley approximately 60 miles east of Los Angeles, and serves water to an area of approximately 75 square miles within the City of Riverside and unincorporated area within Riverside County. The RPU service area encompasses the University of California at Riverside campus and the NDDP site. The RPU is a municipally-owned utility that provides potable, non-potable, and recycled water to retail customers primarily within the City of Riverside. Its service area overlies portions of several groundwater basins, including the Riverside, Arlington, and Chino Groundwater Basins. The RPU water service area is shown in **Exhibit 4-1**.

### 4.1 Overview of Supply and Demand

RPU has the ability to purchase State Water Project water from Western Municipal Water District (WMWD) through a connection at the Metropolitan Water District of Southern California (MWD) Henry J. Mills Water Treatment Plant (WTP). Up to 30 cubic feet per second (cfs) or 19.4 million gallons per day (mgd) of imported water can be purchased from MWD (via WMWD) through an existing agreement and conveyed through existing infrastructure. Historically, imported water has only been purchased during the peak demand months, when needed.

RPU has facilities to extract groundwater from five groundwater basins: Bunker Hill, Rialto-Colton, Riverside North, Riverside South, and Arlington Basins. The Riverside Basin is divided into Riverside North and Riverside South by the San Bernardino County/Riverside County boundary. These basins are hydrogeologically connected but separated for administrative purposes.

Groundwater extracted from the Bunker Hill Basin, Rialto-Colton Basin, Riverside North, and Riverside South sub-basins is conveyed to RPU's potable or non-potable distribution system depending on the well location and local water quality. Raw groundwater from many of RPU's wells receives treatment prior to entering the potable distribution system.

RPU has a total of 201 wells, of which 50 are potable wells; 14 are non-potable wells; 85 are monitoring wells; and 50 are not active (i.e., standby, out of service, abandoned, destroyed or unknown).

#### 4.1.1 Growth Rate

RPU prepared projections of future demand by using the year 2015 as a starting point and escalating retail demands by an annual growth percentage. The annual growth percentage incorporated two factors: the expected increase in service area population, and the expected change in per-capita consumption. The estimated RPU service area population is shown in **Table 4-1**.

**Table 4-1 – Riverside Public Utilities Service Area Population (UWMP Table 4-1)**

	2015	2020	2025	2030	2035	2040
Population Served	294,500	310,700	322,500	334,700	347,300	360,500

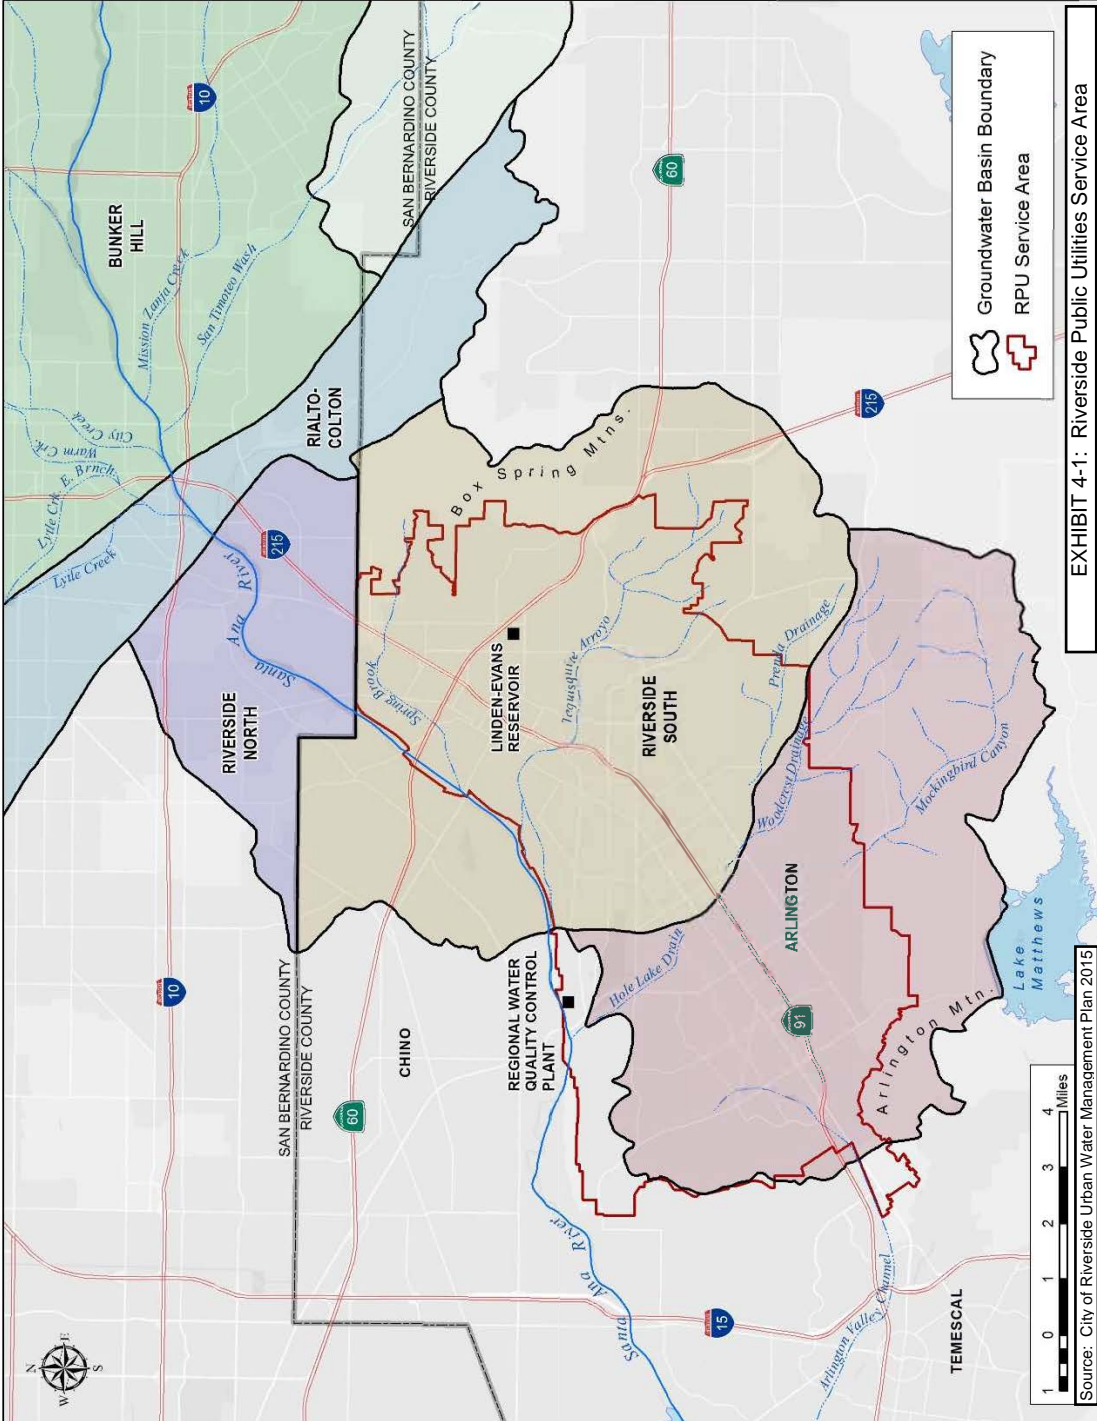

The RPU identified water demand associated with growth and expansion at UCR as one of its three categories of growth. **Table 4-2** (UWMP Table 5-2) estimates total Riverside Public Utilities water demands.

**Table 4-2 - Total Projected RPU Potable Water Demands, AFY (UWMP Table 5-2)**

Use Type	Level of Treatment	2020	2025	2030	2035	2040
Single Family	Drinking Water	29,931	31,064	32,241	33,462	34,730
Multi-Family	Drinking Water	5,365	5,568	5,779	5,998	6,225
Commercial/Institutional	Drinking Water	9,959	10,337	10,728	11,135	11,556
Industrial	Drinking Water	9,845	10,218	10,605	11,006	11,423
Landscape	Drinking Water	1,050	100	150	200	250
Agricultural irrigation	Drinking Water	1,707	1,772	1,839	1,908	1,981
Other	Drinking Water	371	385	399	414	430
Deliveries to WMWD	Drinking Water	4,300	4,300	4,300	4,300	4,300
Wholesale to HGCWD	Drinking Water	0	0	0	0	0
Additional UCR Demand	Drinking Water	3,300	3,300	3,300	3,300	3,300
California Baptist University Added Demand	Drinking Water	150	150	150	150	150
GCC (Upper)	Drinking Water	6,000	6,000	6,000	6,000	6,000

#### 4.1.2 Water Demand

The City's total water demand (including recycled water) in Year 2015 was approximately 75,128 AFY. The NDDP project water demand was accounted for in the future demand estimate for additional UCR demand (3,300 AFY) as identified in the 2015 UWMP, and is estimated to be a total of 676,874 gpd, or 758 AFY. Current water demands of existing residents on-site are estimated at approximately 52,400 gpd, or 58 AFY. Therefore, the Project site's net total water demand due to the NDDP project is approximately 624,474 gpd, or 700 AFY. The Project includes candidate recycled water uses for irrigation of approximately 11 acres of open space.

Other development projects completed, or currently underway, as part of the University's Long Range Development Plan are listed in Table 4-3.

**Table 4-3 – Concurrent or Completed LRDP Projects for UCR**

Description <sup>[1]</sup>	Bldg Area	Completion Year	Est. Usage Factor	Estimated Average Water Demand
<i>Construction</i>				
Lathhouse	1,200 sf	2015	200 gpd/ksf	240 gpd
FMRI	1,740 sf	2016	200 gpd/ksf	348 gpd
Environmental Health & Safety	29,125 sf	2016	200 gpd/ksf	5,825 gpd
Solar Greenhouse	1,120 sf	2017	200 gpd/ksf	112 gpd
Medicine Trailer	5,760 sf	2017	200 gpd/ksf	1,152 gpd
MRB1 (research)	190,000 sf	2019	300 gpd/ksf	57,000 gpd
Barn Expansion	8,350 sf	2020	100 gpd/ksf	835 gpd
Dundee Residential Hall (1000 beds)	176,400 sf	2020	750 gpd/ksf	132,300 gpd
Glasgow Dining	50,600 sf	2020	1000 gpd/ksf	50,600 gpd
<b>Total</b>	<b>464,295 sf</b>			<b>248,412 gpd</b>
<i>Demolition</i>				
Highlander Hall	61,251 sf	2017-18	750 gpd/ksf	45,938 gpd
Human Resources	8,242 sf	2017-18	200 gpd/ksf	1,648 gpd
<b>Total</b>	<b>69,493 sf</b>	-		<b>47,586 gpd</b>
<b>Net "Other" NCR development</b>				<b>200,826 gpd</b>

[1] Provided by UCR staff in e-mail correspondence 11/21/18.

Combined with other completed and current UCR LRDP projects UCR's total increased water demand since the 2015 UWMP is anticipated at 200,826 gallons per day (225 AFY) plus 624,474 gpd (700 AFY), or 925 AF which is within the 3,300 AFY projected for the UWMP.

#### 4.1.3 Demand and Supply Comparison

Table 4.1-2 shows the demand and supply data for current (2015) and projected water demand and supply for the Riverside Public Utilities, including additional demand the Project will require through 2040. This represents a 20-year minimum planning period as required by Senate Bill 610.

Demand and supply projections consider land use, in addition to water development programs

and projects. A supply surplus is indicated demonstrating a sufficient water supply for the RPU for the next 20+ years.

**Table 4-4 - Projected Water Demand and Supply for RPU Service Area**

	(AFY)	Projected (AFY)				
	2015	2020	2025	2030	2035	2040
<b>DEMAND [1]</b>						
Raw and Potable	74,928	88,791	90,104	92,585	95,159	97,827

## 4.2 Groundwater

An important management consideration that affects RPU's groundwater production in several basins is the Western-San Bernardino Judgment (Western Municipal Water District of Riverside County v. East San Bernardino County Water District, Case No. 78426). The Western-San Bernardino Judgment addresses groundwater management within the Rialto-Colton Basin, Riverside-Arlington basin, and the San Bernardino Basin Area (SBBA), which contains the Lytle Basin and the Bunker Hill Basin. The Western-San Bernardino Judgment was established at the same time as the Orange County Judgment (Orange County Water District v. City of Chino, et al., Case No. 117 628) to settle rights within the upper Santa Ana River watershed to ensure resources would be sufficient to meet flow obligations in the lower Santa Ana River set by the Orange County Judgment. The Western-San Bernardino Judgment established the entitlements and groundwater replenishment obligations of the two major water agencies, San Bernardino Valley Municipal Water District (Valley District) and WMWD. The Western-San Bernardino Judgment provides for:

- A determination of the safe yield of the SBBA;
- Establishment of specific amounts of water that can be extracted from the SBBA by plaintiff parties (parties in Riverside County);
- Valley District must provide replenishment for extractions from the SBBA by non-plaintiffs (entities in the Valley District service area) in aggregate exceeding 72.05% of the safe yield, which is 167,228 AFY;
- WMWD must replenish the Rialto-Colton and Riverside-Arlington basins if extractions for use in Riverside County in aggregate exceed certain specific amounts; and

- Valley District must replenish the Rialto-Colton and Riverside-Arlington basins if water levels are lower than certain specific water level elevations in specified wells.

These areas are defined by DWR as the Bunker Hill Groundwater Basin, Rialto-Colton Groundwater Basin, and the northern portion of the Riverside-Arlington Groundwater Basin. The Riverside Basin is split by the Western-San Bernardino Judgment based on county boundaries into Riverside North (San Bernardino County) and Riverside South (Riverside County).

The adjudication resulted in the naming of the Western-San Bernardino Watermaster (Watermaster) consisting of two persons, one nominated by Valley District and the other by WMWD, appointed by the presiding judge. The Watermaster prepares an annual report documenting the previous year's pumping and export activities. In addition, groundwater elevation, streamflow, and water quality are documented.

The Western-San Bernardino Judgment also required the Watermaster to establish base extraction rights and export rights based on the average annual extractions and exports over the 5-year period from 1959 through 1963.

#### 4.2.1 Groundwater Basin Description

RPU has facilities to extract water from five groundwater basins. Each of these basins are discussed below.

##### 4.2.1.1 Bunker Hill Basin

The Bunker Hill Basin is a valley-fill aquifer comprised of six confining and water-bearing hydrogeologic units. The Bunker Hill Basin lies between the San Andreas and San Jacinto Faults. The primary source of recharge for the Bunker Hill Basin is runoff from precipitation in the San Bernardino Mountains to the north and San Gabriel Mountains to the northwest. Wastewater discharge and imported water contribute to smaller amounts of groundwater recharge.

Valley District, WMWD, and the San Bernardino Valley Water Conservation District (SBVWCD) are active in recharging the Bunker Hill Basin. RPU's extraction rights from the San Bernardino Basin Area, which includes the Bunker Hill Basin, have been revised to reflect new water conservation associated with the operation of the Seven Oaks Dam. The adjusted rights are summarized in Table 4-5.

**Table 4-5 - RPU Extraction Rights from SBBA Reflecting New Conservation (UWMP Table 7-1)**

Entity	Extraction Right	New Conservation (195 cfs)	Adjusted Right (subtotal)
City of Riverside (RW Co and Gage Canal Co)	49,542	1,719	51,261
Agua Mansa and Meeks & Daley Water Co -	2,908	100	3,008
Riverside Highland Water Co - RPU Share	440	0	440
Regents of the University of California -	536	18	554
<b>Total</b>	<b>53,426</b>	<b>1,837</b>	<b>55,263</b>

##### 4.2.1.2 Rialto-Colton Basin

The Rialto-Colton Basin is bounded by the San Jacinto fault to the northeast, Rialto-Colton fault to the southwest, the San Gabriel Mountains to the northwest, and Badlands to the southeast. The Rialto-Colton Basin consists of four hydrostratigraphic units with the water-bearing units

expressing unconfined to partly confined properties.

The basis for establishment of extraction rights stipulated within the Western-San Bernardino Judgment was groundwater production over the 5-year period from 1959 through 1963 (Base Period). For the Rialto-Colton Basin, the base period extraction is set only for that which is used within Riverside County. Provided that the minimum groundwater elevations within the Rialto-Colton Basin are maintained by Valley District, extractions from the Rialto-Colton Basin for use within San Bernardino Valley are not limited. The Western-San Bernardino Judgment established 3,381 acre-feet as the base period extraction for use of Rialto-Colton Basin groundwater in Riverside County. Should extractions exceed the base period extraction over a 5-year period, or by more than 20 percent in a single year, WMWD is responsible for replenishment in the following year equal to the excess extractions over a 20-percent peaking allowance, unless credits are available from previous years due to production below the base period extraction or due to importing water.

RPU's extraction rights from the Rialto-Colton Basin include 2,418 AFY for the City of Riverside and 310 AFY for RPU's shares of Agua Mansa and Meeks & Daley Water Company, for a total of 2,728 AFY.

As of the 2015 Watermaster Annual Report, WMWD has total credits of 466,040 acre-feet for the Rialto-Colton and Riverside Basins.

#### **4.2.1.3 Riverside North Basin**

The Riverside Basin is bounded by the Rialto-Colton fault to the north, Arlington Basin to the south, Box Spring Mountains to the east, and Chino Basin to the west. The Riverside basin is an alluvial fill, unconfined basin.

The basis for establishment of extraction rights stipulated within the Western-San Bernardino Judgment was groundwater production in the Riverside Basin over the 5-year period from 1959 through 1963. The Western-San Bernardino Judgment divides the Riverside Basin into two areas, based on jurisdictional boundaries: the portion of the Riverside Basin in San Bernardino County (Riverside North) and the portion of the Riverside Basin in Riverside County (Riverside South).

For Riverside North, the base period extraction is set only for that which is used within Riverside County. Provided that the minimum groundwater elevations within Riverside North are maintained by Valley District, extractions from Riverside North for use within San Bernardino Valley are not limited. The Judgment established 21,085 acre-feet as the base period extraction for use of Riverside North groundwater in Riverside County.

In Riverside North for use in Riverside County, should extractions exceed the base period extraction over a 5-year period, or by more than 20 percent in a single year, WMWD is responsible for replenishment in the following year equal to the excess extractions over a 20-percent peaking allowance. WMWD's replenishment obligation can be reduced through credits that are available from previous years due to importing water into the basin or production below the base period extraction.

RPU's extraction rights from Riverside North are 10,902 AFY.

#### **4.2.1.4 Riverside South Basin**

For Riverside South, the Western-San Bernardino Judgment set a 5-year base period extraction

of 29,663 acre-feet for use in Riverside County. In Riverside South, should extractions exceed the base period extraction over a 5-year period, or by more than 20 percent in a single year, WMWD is responsible for replenishment in the following year equal to the excess extractions over a 20 percent peaking allowance, unless credits are available from previous years due to productions below the base period extraction or to importing water.

RPU's extraction rights from Riverside South are 16,880 AFY.

#### **4.2.1.5 Arlington Basin**

The Arlington Basin consists of alluvial deposits and is located between the Riverside South and the Temescal Basin. The Arlington Basin is not currently used by RPU due to the high levels of total dissolved solids and nitrates. The City may use the Arlington Basin as a source of water supply in the future if the costs for alternative new supplies make treatment of water from this source cost-effective. The Arlington Basin is not adjudicated.

#### **4.2.2 Groundwater Management**

Groundwater management activities are undertaken in cooperation with local agencies including WMWD, Valley District, Santa Ana Watershed Project Authority (SAWPA), and the San Bernardino Valley Water Conservation District (SBVWCD). The court appointed the Western-San Bernardino Watermaster to manage and report on the conditions of the local groundwater basins. Annually, Valley District publishes an engineering report to determine the replenishment requirements for the Bunker Hill Basin in the ensuing water year.

In 2005, the Upper Santa Ana Water Resources Association (USAWRA) formed the Basin Technical Advisory Committee (BTAC) with Valley District as the lead agency to develop an Integrated Regional Water Management Plan (IRWMP) for the Upper Santa Ana River Watershed. The IRWMP was completed in 2007 and was updated in 2015. It focuses on long-term management of water resources in the Bunker Hill and Rialto-Colton basins and the reduction of reliance on imported water. Currently, BTAC meets monthly with the primary purpose of managing resources to optimize groundwater recharge and extraction activities.

The Valley District has established target ranges for groundwater level management within Bunker Hill Basin, and is obligated under the Western-San Bernardino Judgment to maintain water levels in the Rialto-Colton Basin and Riverside North.

In 2010, SAWPA adopted its One Water One Watershed (OWOW) Integrated Regional Water Management Plan for the entire Santa Ana River watershed. RPU participated in development of the OWOW plan and in the development of the revised plan, OWOW 2.0, in 2014.

RPU assists in regional groundwater management as a member of both USAWRA and BTAC. RPU, in collaboration with WMWD, the Valley District, and other water retailers that produce water from the Riverside Basin, developed a Groundwater Management Plan (GWMP) for Riverside North and Riverside South. The purpose of the plan is to improve sustainability by managing the quantity and quality of groundwater resources. In addition, WMWD has developed a GWMP for the Arlington Basin.

#### **4.2.3 Historical Groundwater Pumping**

RPU's historical production from each groundwater basin for the past five years is shown in Table 4-6.

**Table 4-6 - Groundwater Volume Pumped (UWMP Table 7-2)**

Groundwater Type	Location or Basin Name	Water Quality	2010	2011	2012	2013	2014	2015
Alluvial Basin	Bunker Hill	Drinking Water	45,360	46,148	50,515	46,702	47,862	48,086
Alluvial Basin	Riverside North	Drinking Water	8,993	7,397	10,862	9,237	6,735	5,095
Alluvial Basin	Riverside South	Drinking Water	11,942	13,773	10,926	14,859	15,221	7,966
Alluvial Basin	Bunker Hill	Raw Water	4,229	4,191	5,859	7,329	5,399	5,707
Alluvial Basin	Riverside North	Raw Water	3,127	5,339	4,319	2,943	2,013	1,262
Alluvial Basin	Riverside South	Raw Water	8,695	7,739	7,921	5,976	6,595	5,605
Alluvial Basin	Rialto-Colton	Raw Water	0	0	0	0	0	1,205
<b>Total</b>			<b>82,346</b>	<b>84,587</b>	<b>90,402</b>	<b>87,046</b>	<b>83,825</b>	<b>74,926</b>

### 4.3 Imported Water

Imported water is treated at the Mills WTP in Riverside prior to delivery to RPU by WMWD. SWP water quality is maintained and governed by the standards established by DWR. The salinity as measured by Total Dissolved Solids (TDS) of SWP water delivered to WMWD is usually less than 300 mg/L, but was as high as 430 mg/L during the 1977 drought. DWR and/or MWD regularly conduct sanitary surveys and monitor the quality of the water according to the applicable standards and regulations.

DWR's estimates of SWP deliveries, and thus WMWD's capacity to its Table A amounts, are based on a computer model that simulates monthly operations of the SWP and Central Valley Project systems. Key assumptions and inputs to the model include the facilities included in the system, hydrologic inflows to the system, regulatory and operational constraints on system operations, and projected contractor demands for SWP water. RPU has the right to purchase up to 30 cfs of SWP imported water from WMWD (21,700 AFY), pursuant to a 1986 agreement.

### 4.4 Surface Water and Stormwater

RPU intends to augment natural recharge in the Bunker Hill and Riverside basins through conjunctive use projects. These projects will enhance groundwater recharge when excess water is available, with the goal of making that water available for groundwater production during dry periods.

In addition to the supply sources currently utilized by RPU to meet demands in its service area, local stormwater is another potential supply that could be used. While the Riverside County Flood Control and Water Conservation District (RCFC&WCD) and the San Bernardino County Flood Control District (SBCFCD) own and operate the existing regional flood control systems in and around RPU's service area, opportunities are available for RPU to capture and recharge additional stormwater.

The IWMP included an assessment of stormwater capture opportunities. The findings of this analysis translated in the definition of a number of potential water supply projects, which were further developed and described in the IWMP. RPU is continuing to investigate and develop these potential projects, as summarized below:

#### **4.4.1 The Seven Oaks Dam Conservation Project**

Seven Oaks Dam Conservation Project is a cooperative, interagency project among WMWD, Valley District, RPU, and others that allows the agencies to capture up to 200,000 AFY of previously unallocated stormwater from the Santa Ana River. This surface supply is obtained from Seven Oaks Dam, a flood control facility owned by the Army Corps of Engineers, and recharged at new, jointly owned spreading basins immediately downstream from the dam. The cooperative project does not involve extraction of stored groundwater. Participants, including RPU, would have to use their existing facilities or build new groundwater extraction wells within the Bunker Hill Basin to be able to utilize the allocated water.

#### **4.4.2 The Riverside North ASR**

The Riverside North ASR project is located on the east side of the SAR, approximately 1.5 miles southwest of the I-15 and I-10 interchange. The site is located on a tract of land referred to as the “Flume Well Tract.” Implementation of this project would benefit RPU by recharging the Riverside North Basin with stormwater through in- channel and off-channel recharge facilities. The off-channel facilities are located to the west of the SAR on RPU-owned land.

#### **4.4.3 Jackson-Arlington Project**

The Project involves construction of approximately 27,650 linear feet (LF) of 8- inch and 24-inch diameter recycled water pipelines. The Project’s ultimate alignment is from the intersection of Jackson St. and Van Buren Blvd., heading southeast along Jackson St. and Monroe St. to Cleveland Ave. where it will tie into the existing 24-inch Western Municipal Water District (WMWD) non-potable water pipeline, continuing southeasterly and ending at Mockingbird Reservoir. The proposed Regional Concept pipeline (UWMP Table 7-7) would be supplied by the Jackson-Arlington project and provide conveyance capacity to deliver recycled water to additional users in the RPU service area. It is anticipated that up to 6,170 AFY could be made available for RPU users in the future.

### **4.5 Wastewater and Recycled Water**

The City of Riverside Public Works Department operates and maintains the Riverside Regional Water Quality Control Plant (RWQCP). The plant capacity has recently been expanded to 46 million gallons per day (mgd). The service area of the RWQCP extends beyond the RPU service area to include the areas served by Jurupa, Rubidoux, and Edgemont Community Services Districts.

Tertiary-treated effluent from the RWQCP is discharged into the Santa Ana River (SAR). The RWQCP is required to discharge 15,250 acre-feet per year, adjusted for quality, to meet downstream obligations to Orange County Water District (OCWD) established in the Orange County Judgment. A separate requirement, to discharge a total of 25,000 AFY, is included in the RWQCP ORDER WR 2008 – 0024 Conditionally Approving Wastewater Change Petition WW- 0045.

#### **4.6 Recycled Water**

RPU and the City’s Public Works Department conjointly manage and plan wastewater and recycled water operations and programs. The Public Works Department operates and maintains the RWQCP. The RWQCP is the only wastewater treatment plant that receives wastewater generated within the RPU service area.

##### **4.6.1 Wastewater Collection, Treatment, and Disposal**

All wastewater from the RPU water service area is treated at the RWQCP, a tertiary treatment

facility.

#### 4.6.2 Recycled Water System

The City currently operates a recycled water distribution system with a combined pipeline length of approximately 4 miles. This system serves six existing customers with a combined demand of approximately 260 acre-feet per year.

Establishing standards for the use of recycled water is one of the policies included in the City's General Plan 2025. In addition, RPU has adopted an ordinance titled Mandatory Use of Recycled Water that is designed to encourage recycled water use.

### 1.7 Summary of Existing and Planned Sources of Water

RPU intends to fully utilize its water rights from the Bunker Hill Basin plus the quantity of water available through conjunctive use. RPU plans to increase the use of recycled water as described above. The balance of RPU's water supply will come from the Rialto-Colton Basin, Riverside North, and Riverside South. RPU's conjunctive use projects in the Riverside Basin will augment the yield of the basin and allow RPU to increase production over historical levels.

Production and recharge associated with RPU's conjunctive use projects will be coordinated with Valley District and WMWD to prevent adverse effects on groundwater levels and quality. RPU anticipates being able to mitigate any unforeseen incremental contamination issues stemming from increased production through existing or future wellhead treatment facilities and/or through blending.

The current and projected supplies available to RPU are shown in Tables 4-7 and 4-8.

**Table 4-7 - Water Supplies – Actual (UWMP Table 7-9)**

Water Supply	Additional Detail on Water Supply	2015 Actual Volume	2015 Water Quality

	<b>Total</b>	<b>116,903</b>	<b>121,903</b>	<b>124,703</b>	<b>124,703</b>	<b>124,703</b>

## **5.0 RELIABILITY OF WATER SUPPLIES**

### **5.1 Constraints on Water Sources**

Historically, RPU's source waters have proven reliable, even during the multi-year droughts from 1984 to 1990, 1999 to 2002, 2006 to 2009, and the current drought. To date, RPU has not experienced any major deficiencies in water supply. RPU, water management agencies, and other local water retailers are cooperating to further increase the reliability of groundwater from the Bunker Hill Basin, Rialto-Colton Basin, Riverside North Sub-basin, and Riverside South Sub-basin.

In order to increase groundwater production beyond historical levels and improve water supply reliability of the local groundwater basins, RPU has collaborated with other local water retailers through SAWPA, the USAWRA, and BTAC to address the various groundwater management issues. Typical collaborative efforts include developing groundwater models, sharing groundwater quantity/quality data, partnering on regional projects, and conducting source water assessments.

RPU produces groundwater from wells spatially distributed across the Bunker Hill Basin, Riverside North, and Riverside South. Some treatment occurs at wellhead or regional facilities prior to delivery to the major transmission mains. Production from wells and/or treatment facilities is blended and chlorinated within the major transmission mains prior to distribution from the Linden Evans Reservoir. The blending makes the system water less vulnerable to contamination at individual wells.

RPU regularly monitors the quality of its water supply. Annually, RPU distributes summary reports on water quality to its customers.

#### **5.1.1 Groundwater**

Local groundwater supplies account for most of RPU's water supplies, with approximately 60 percent originating from the Bunker Hill Basin, which is adjudicated. RPU's water rights are based on the long-term safe yield from the Bunker Hill Basin, which includes wet, dry, and normal periods. RPU's wells are generally located in the section of the basin with the greatest thickness of water bearing layers. Thus, RPU's water supply from the Bunker Hill Basin is considered reliable during single and multi-year dry periods. The Western-San Bernardino Judgment also permits producers to increase groundwater production by up to 20 percent in any single year for peaking purposes.

As part of the 2011 Riverside Basin Groundwater Management Plan, the safe yield for the Riverside and Arlington Basins were established based on 43 years of historical production and hydrologic conditions (1965 to 2007). This period includes wet, dry, and normal periods and is considered to be representative of long-term mean climatological conditions. The calibrated numerical groundwater model of the Riverside and Arlington basins determined the safe yield to be 27,200 acre-feet in Riverside North and 35,100 acre-feet in Riverside South. Recharge associated with RPU's planned conjunctive use projects will allow RPU to increase groundwater production from the Riverside Basin without adversely impacting the sustainability of this water resource.

In general, the natural quality of water in local groundwater basins is acceptable and reliable. Potential hazards that could impact the quality of groundwater from local basins include migrating contaminant plumes, chemical spills, agricultural return flows, leaky underground storage tanks, and septic systems. Chemical spills and leaking underground storage tanks

initially tend to affect a small number of wells, whereas contaminant plumes, agricultural return drainage, and septic systems may impact regional aquifers.

Previous improper waste disposal practices created several groundwater plumes that have the potential to impact a number of RPU wells. RPU implemented several measures to address groundwater contamination that affected its source water. Some of the implemented measures include well replacement, wellhead treatment pilot studies, and preparation of a water treatment feasibility study. RPU has also developed a Water Supply Contingency Plan and a water quality blending optimization model.

RPU was able to improve the quality of its domestic water by successfully implementing a comprehensive strategy that emphasized pollution prevention and source water protection.

### **5.1.2 Surface Water**

The quantity of surface water recharge from RPU's existing and planned conjunctive use projects depends on the hydrologic conditions in the Santa Ana River Watershed. Through the use of the groundwater basins for storage, RPU is not reliant on surface water flows to directly meet demands during a dry period. Therefore, RPU's supply reliability is not impacted by short-term fluctuations in local surface water flow.

### **5.1.3 Recycled Water**

The primary source of recycled water is local groundwater that has been used as potable water then reclaimed at the RWQCP. RPU plans to reuse available recycled water from the RWQCP and considers this supply to be 100 percent reliable during single or multi-year dry periods.

The RWQCP treats effluent to tertiary standards and monitors the quality to ensure compliance with the discharge permit from Santa Ana Regional Water Quality Control Board (SARWQCB) and the regulations set by the Division of Drinking Water (DDW).

### **5.1.4 Imported Supplies**

RPU is contracted to receive State Water Project (SWP) water from MWD through WMWD. MWD is the largest State Water Contractor, with an annual maximum entitlement of 1,911,500 acre-feet through 2035. However, actual deliveries of State Water Project water to MWD vary each year based on the amount of precipitation and projected water use within MWD's service area.

Imported water is treated at the Mills WTP in Riverside prior to delivery to RPU by WMWD. SWP water quality is maintained and governed by the standards established by DWR. The salinity as measured by Total Dissolved Solids (TDS) of SWP water delivered to WMWD is usually less than 300 mg/L, but was as high as 430 mg/L during the 1977 drought. DWR and/or MWD regularly conduct sanitary surveys and monitor the quality of the water according to the applicable standards and regulations.

DWR prepares a biennial report to assist SWP contractors and local planners in assessing the near and long-term availability of supplies from the SWP. DWR issued its most recent update, the 2017 DWR State Water Project Delivery Capability Report (DCR), in March 2018. In the 2017 update, DWR provides SWP supply estimates for SWP contractors to use in their planning efforts. The 2017 DCR includes DWR's estimates of SWP water supply availability under both current and future conditions.

DWR’s estimates of SWP deliveries are based on a computer model that simulates monthly operations of the SWP and Central Valley Project systems. Key assumptions and inputs to the model include the facilities included in the system, hydrologic inflows to the system, regulatory and operational constraints on system operations, and projected contractor demands for SWP water.

## 5.2 Reliability by Type of Year

In general, groundwater and recycled water supplies are less vulnerable to seasonal and climatic changes than surface water (i.e. local and imported) supplies. RPU has been able to increase production from local groundwater basins during previous droughts pursuant to the Western-San Bernardino Judgment. The Western-San Bernardino Watermaster independently reviews groundwater conditions annually to assess the change in groundwater levels. Historically, the Watermaster permitted additional extraction beyond the specified water rights from the Bunker Hill Basin to decrease higher than optimal groundwater levels in the basin.

DWR defines a multiple-dry year period as “three or more consecutive years with the lowest average annual runoff.” In recent years RPU has obtained the majority of its water supply from the Bunker Hill Basin. The UWMP selected 1999 through 2002 as the basis for multiple-dry years for the Bunker Hill Basin. The year 2014 was selected to represent the single dry year.

The reliability of SWP imported water for MWD impacts MWD member agencies’ abilities to plan for future growth and supply. In January 2010, the DWR Bay-Delta Office published a report specifically addressing the reliability of the SWP. Subsequent updates of this report are known as the Delivery Capability Reports (DCR), and provide information on the reliability of the SWP to deliver water to its contractors assuming historical precipitation patterns. The 2017 DCR uses the following assumptions to model current conditions: existing facilities; hydrologic inflows to the model based on 82 years of historical inflows (1922 through 2003); current regulatory and operational constraints; and contractor demands at maximum Table A amounts.

The report has been updated three times – in 2013, 2015 and 2017. The 2017 report also considers factors for climate change. The updated report projects deliveries of SWP imported water to have a 77 percent likelihood that more than 2,000 TAF of Table A water will be delivered annually. This compares to 74 percent likelihood in the 2015 Report.

## 5.3 Supply and Demand Assessment under Normal and Dry Years

RPU has assumed that 100 percent of its groundwater and recycled water supplies would remain available during a single dry year and multiple dry years. The availability of imported water has been adjusted based on the scenarios identified for the State Water Project.

Comparisons of expected supply and demand during a normal year, single dry year, and multiple dry years are shown in the tables below.

**Table 5-1 - Normal Year Supply and Demand Comparison (UWMP Table 8-2)**

Totals	2020	2025	2030	2035	2040
Supply Totals	116,903	121,903	124,703	124,703	124,703
Demand Totals	95,221	96,534	99,015	101,589	104,257
Difference	21,682	25,369	25,688	23,114	20,446

**Table 5-2 - Single Dry Year Supply and Demand Comparison (UWMP Table 8-3)**

Totals	2020	2025	2030	2035	2040
Supply Totals	96,288	101,288	104,088	104,088	104,088
Demand Totals	95,221	96,534	99,015	101,589	104,257
Difference	1,067	4,754	5,073	2,499	(169)

During a period of multiple dry years, the expected supplies are slightly higher because of the higher average availability of water from the State Water Project.

**Table 5-3 - Multiple Dry Years Supply and Demand Comparison (UWMP Table 8-4)**

Year	Totals	2020	2025	2030	2035	2040
First Year	Supply Totals	102,364	107,364	110,164	110,164	110,164
	Demand Totals	95,221	96,534	99,015	101,589	104,257
	Difference	7,143	10,830	11,149	8,575	5,907
Second Year	Supply Totals	102,364	107,364	110,164	110,164	110,164
	Demand Totals	95,221	96,534	99,015	101,589	104,257
	Difference	7,143	10,830	11,149	8,575	5,907
Third Year	Supply Totals	102,364	107,364	110,164	110,164	110,164
	Demand Totals	95,221	96,534	99,015	101,589	104,257
	Difference	7,143	10,830	11,149	8,575	5,907

#### 5.4 Regional Supply Reliability

RPU is committed to minimizing the need to import water from other regions. RPU participates in regional supply planning projects to optimize and enhance the use of local groundwater resources. RPU operates a number of conservation programs to implement various Demand Management Measures. RPU is also evaluating the future use of additional recycled water from the RWQCP, either through direct use or through groundwater recharge.

RPU's available water sources include groundwater, recycled water, and imported water. RPU plans to augment groundwater production through conjunctive use projects that recharge surface water, recycled water, and/or imported water.

RPU has been able to meet all of its demands with its existing water supply portfolio, even through periods of single and multiple-dry years. Virtually all of its demands are supplied with groundwater from the Bunker Hill Basin, the Riverside North and South Basins, and the Rialto-Colton Basin. The Bunker Hill Basin is adjudicated, and governed by the Western-San Bernardino Judgment. Therefore, the appointed management agency, the Western-San Bernardino Watermaster, closely monitors the capacity of the basin and establishes pumping criteria. Therefore, based on historical performance during all types of years, the Basin is considered to be a reliable supply source during extended periods of drought.

#### 5.5 Water Shortage Plans

RPU's 2010 UWMP included a Water Shortage Contingency Plan (WSCP) and three supporting appendices: RPU Water Rule #9 (Shortage of Water Supply and Interruption of Delivery, also known as the Water Shortage Ordinance); RPU Water Rule #15 (Water Waste); and a draft Water Conservation Ordinance that expanded on the Water Shortage Ordinance and was

adopted by RPU's Board after the preparation of the 2010 UWMP. The Water Conservation Ordinance amended the Riverside Municipal Code Title 14 and included a detailed description of unreasonable uses of water, RPU's Water Conservation Program, responses to water shortage emergencies, and enforcement and severability.

In July of 2014, the City Council adopted revisions to the City's Water Conservation Ordinance, as set forth in RMC Chapter 14.22, and adopted a resolution implementing Stages 1 and 2 of the City's Water Conservation Ordinance. The revisions to Chapter 14.22 changed Stage 2 restrictions from voluntary to mandatory. They also limited non-agricultural landscape watering to four days in Stage 2 and decreased the non-agricultural landscape watering to three days in Stage 3.

In June of 2015, the City Council adopted additional changes to the Water Conservation Ordinance. The changes included additional restrictions on irrigation water use and an updated enforcement policy. The City also adopted a resolution implementing Stages 1, 2, and 3 of the Water Conservation Ordinance.

### **5.5.1 Stages of Action**

The Water Conservation Ordinance establishes a Water Conservation Program which uses four stages to address conditions and needs. The Water Conservation Stage shall be set by City Council action. All normal water efficiency programs and water conservation regulations shall remain in force during any stage, unless the City Council directs otherwise.

#### **5.5.1.1 Stage One (Normal Water Supply)**

Applies when the City can meet all of its water demands, but has determined that certain conservation methods are warranted to preserve existing water supplies in the event the City will be unable to meet future water demands. Any other normal water efficiency programs and water conservation regulations remain in force during Stage One.

#### **5.5.1.2 Stage Two (Minimum Water Shortage)**

Applies when a reasonable probability exists that the City will not be able to meet all of its water demands or other regional or statewide conditions warrant implementation.

#### **5.5.1.3 Stage Three (Moderate Water Shortage)**

Applies when the City will not be able to meet all of the water demands of its Customers or other regional or statewide conditions warrant implementation.

#### **5.5.1.4 Stage Four (Severe Water Shortage)**

Applies when the City's ability to meet its water demands is seriously impaired.

#### **5.5.1.5 Stage Definitions**

Stage One represents normal conditions. Stage One conservation measures are voluntary, and will be enforced through public outreach, education, and awareness measures by the City. Stages Two, Three and Four represent potential and actual shortages. Stages Two, Three and Four may be triggered by a local or regional water supply shortage; production, treatment, transmission, or delivery infrastructure problems; limited or unavailable alternative water supplies; or other circumstances. Stages Two, Three, and Four conservation measures are mandatory, and violations may be subject to criminal, civil, and administrative action. Stage One conservation measures become mandatory when Stage Two, Three, or Four are declared.

### 5.5.1.6 City Council Declaration

If the City Council has declared either Stage Three or Stage Four conservation, it may also, by resolution, declare a Water Shortage Emergency. A Water Shortage Emergency may be an immediate emergency, or a threatened future water shortage, or both.

Upon declaration of a Water Shortage Emergency:

1. No new construction meters will be issued.
2. No construction water may be used for earth work such as road construction purposes, dust control, compaction, or trench jetting.
3. No new building permit(s) shall be issued, except:
  - a) Projects found by the City Council to be necessary for public health, safety.
  - b) Projects using recycled water for construction.
  - c) Projects which will not result in a net increase in non-recycled water use.
  - d) Projects with adequate Conservation Offsets, if available. The City, in its sole discretion, may choose to make Conservation Offsets available. Conservation Offset costs shall be based on the cost of conserving the water elsewhere to provide the water needed for a project, the cost of providing an alternative water supply deemed acceptable by the City, or other measures as may be found in the City's Water Use Efficiency Master Plan. Conservation Offset fees will be set forth in the Water Rules and Rate Schedules.

During a mandated reduction, RPU will intensify its water conservation programs, especially public education. RPU promotes efficient water use including non-potable uses such as landscaping and irrigation (Chapter 19.67 of the Riverside Municipal Code). Recycled water from the RWQCP may be used for street cleaning.

The stages are summarized in Table 5-4.

**Table 5-4 – Stages of Water Shortage Contingency Planning (UWMP Table 9-1)**

Stage	Percent Supply Reduction	Water Supply Condition
1	0	Normal Water Supply
2	15	Minimum Water Shortage
3	15 - 20	Moderate Water Shortage
4	20 - 50	Severe Water Shortage

## **6.0 CONCLUSION**

The City of Riverside and its water utility, Riverside Public Utilities, optimizes water resource supply through an integrated resource approach, utilizing available water programs and projects. The RPU receives its water supplies from groundwater, imported water, and recycled water. Complexities and continuing refinement in groundwater management and rights, evolving development of the regional recycled water system and supplies, and challenges of imported water reliability are continually evaluated for analysis of water demand and supply.

A CEQA report is being prepared for the North District Development Project (NDDP or Project) project, which includes an assessment of utility services and includes this Water Supply Assessment (WSA) pursuant to Senate Bill 610. The WSA will also be used by the RPU as part of its ongoing planning efforts to optimize its water resource program.

The WSA includes a discussion of the Senate Bill 610 legislation, an overview of the proposed Project, and analysis of water demands for RPU's existing service area and the Project and other City development projects within the RPU service area and over the UWMP planning horizon. The WSA also includes an analysis of reliability of the City's water supplies and water quality, and concludes with a sufficiency analysis of water supply during normal, single-dry, and multiple dry years for the next 20-plus years.

The Project is a proposed development component of the University of California at Riverside (UCR) campus. The NDDP is located at the north end of campus adjacent to Linden Street and Canyon Crest Drive. The 51.15-acre site currently consists of low density housing. The proposed Project includes an Events Center, 7,300 beds, and college mixed use districts.

### ***Source of Water***

In Year 2015 RPU produced 75,126 AF of water from its groundwater sources, as well as 200 AF recycled water from the RWQCP, for its residential, commercial, industrial, landscape irrigation and agricultural customers.

### ***Water Demand and Supply Projections***

The RPU will meet its future water demands, including the demands for the Project, from existing supply sources. Future projects are in various planning or design phases, including enhanced stormwater recharge of the local groundwater basins from the Seven Oaks Dam, Bunker Hill conjunctive use project, Riverside North Basin Aquifer Storage and Recovery, and the Jackson-Arlington Project which will tie into WMWD recycled water pipeline and deliver irrigation water to an increased area of its service area.

The Project is estimated to increase demand on RPU's potable water system by 700 AFY. Candidate recycled water uses include over 11 acres of open space potentially for irrigation.

Analysis of water demand and supply projections for RPU's service area, including the NDDP, demonstrates that estimates of projected supplies are sufficient to satisfy RPU demand through Year 2040. The capacity of the SBBA, managed in accordance with the Western-San Bernardino Watermaster, may be used to buffer episodes of drought and help address impacts that may result from extended droughts, and temporary reductions in basin safe yields. The analysis relies on the groundwater supplies from the SBBA. Recycled water is proposed to be a major future water source that will minimize the need for imported water purchases.

Analysis of water supply projections for RPU, including the NDDP and future UCR Long Range Development Plan projects, demonstrates that estimates of anticipated projected supply entitlements are sufficient to satisfy RPU demand both now and through the Year 2040 during normal and dry years.

# NORTH DISTRICT STUDENT HOUSING - SEWER CAPACITY EVALUATION

## 1.1 Purpose

The University of California Riverside (UCR) plans to demolish and replace existing student housing. The planned project is the North District student housing project Phase 1 (North District project) located at Linden Street and Aberdeen Drive. There will be a net increase in the number of students housed when North District is completed, thus increasing the water demands and wastewater consumption. The purpose of this study is to understand the impact that North District could have on the City of Riverside's (City's) wastewater collection system. The City's existing wastewater collection system is shown on Figure 1. A hydraulic evaluation was completed by updating the hydraulic model recently developed as part of the City's 2018 Update of the Integrated Master Plan for the Wastewater Collection and Treatment Facilities (Master Plan Update). This report describes the model update, evaluation criteria, and hydraulic evaluation to determine the impact of the proposed North District project.

## 1.2 Model Update

The hydraulic model developed by Carollo Engineers, Inc. (Carollo) included pipelines that are 10 inches in diameter and larger. Some smaller diameter sewers (8 inches in diameter and smaller) are also included in the hydraulic model, where needed, for connectivity. The North District project will tie into an existing 8-inch diameter sewer at Linden Street and Aberdeen Drive (Canyon Crest Sewer). The hydraulic model did not include the Canyon Crest Sewer. The Canyon Crest Sewer connects to the modeled system at University Avenue and Canyon Crest Drive. For the hydraulic analysis, the North District's dry weather flows (DWF) were loaded where the Canyon Crest Sewer discharges to the modeled sewer system. Figure 2 shows the North District connection to the existing sewer system and the point where the loads were allocated to the model.

North District's estimated DWF was developed by American Campus Communities SC Development (Californian) LP (ACC), and is summarized in Table 1. For the purpose of the hydraulic evaluation, the net additional loads associated with the project were allocated to the modeled manhole as DWF. UCR's North District site plan and sewer load calculations are included in Appendix A.

Table 1 Dry Weather Flow - North District

	DWF (gpd)
Demolition of Existing Student Housing	-32,450
New North District Student Housing	127,500
Net Additional Loads	95,050

### 1.3 Evaluation Criteria

The evaluation criteria used in this study are consistent with the evaluation criteria used in Volume 3, Chapter 5: Planning Criteria and Design Flows (Chapter 5) of the Master Plan Update. This section provides a brief description of the evaluation criteria used in this study.

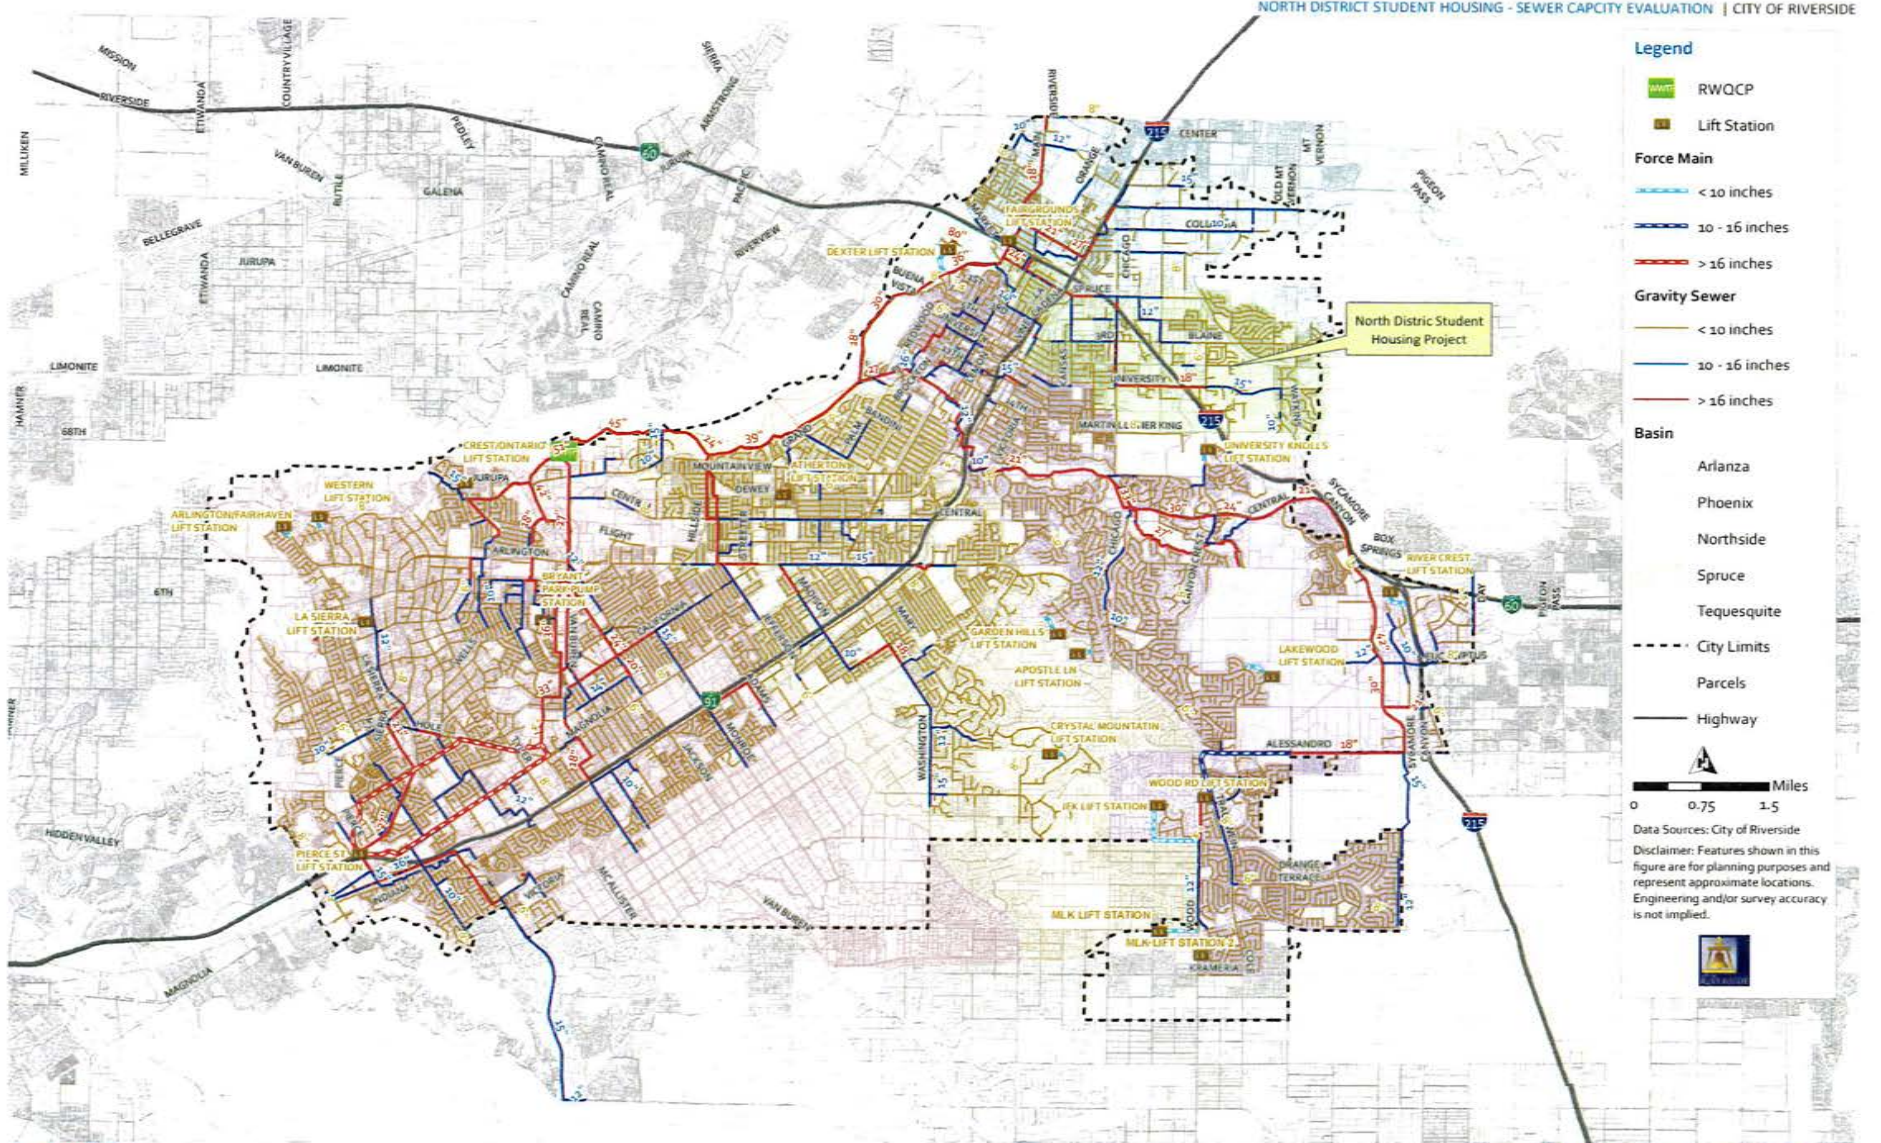

The primary criterion used to identify capacity-deficient sewers or to size new sewer improvements is the maximum  $d/D$ . The  $d/D$  value is defined as the depth of flow ( $d$ ) in a pipe during peak (design) flow conditions divided by the pipe's diameter ( $D$ ). The maximum depth criteria were evaluated under peak wet weather flow (PWWF) conditions. The PWWF design storm is a 10-year 24-hour storm event. Based on the flow monitoring program that was used for model calibrate the R-factor for this part of the sewer system in question. We have assumed for this analysis that the North District Project would not change the R-factor in such a way to impact the analysis

Existing rain derived inflow and infiltration (RDII) developed during the Master Plan Update's wet weather calibration. The wet weather calibration enables the hydraulic model to accurately simulate RDII entering the collection system during a large storm event. The hydrograph utilizes the R-values (percent of rainfall that enters the collection system) calculated for each basin to simulate RDII. Future RDII assumed maximum depth criteria are summarized in Table 2. The following explains these criteria in more detail:

- **Flow Depth for Existing Sewers.** Maximum flow depth criteria for existing sanitary sewers are established based on a number of factors, including the acceptable risk tolerance of the utility, local standards and codes, and other factors. Using a conservative  $d/D$  ratio when evaluating existing sewers may lead to unnecessary replacement of existing pipelines. Conversely, lenient flow depth criteria could increase the risk of sanitary sewer overflows (SSOs). Ultimately, the maximum allowable flow depth criteria should be established to be as cost-effective as possible while at the same time reducing the risk of SSOs to the greatest extent possible. For the City, existing pipelines were flagged if the  $d/D$  exceeded 0.90.

A capacity-deficient sewer (i.e., system bottleneck) raises the hydraulic grade line of upstream sewers, leading to backwater conditions. The greater the capacity deficiency, the higher water levels will surcharge upstream of the bottleneck pipeline (or pipelines). The hydraulic model is used to determine "backwater" pipelines in order to specify which specific pipelines are the actual root causes of the capacity deficiency. Capital projects are proposed to provide greater flow capacity for the deficient sewers, which eliminates the backwater conditions that cause surcharging.

- **Flow Depth for New Sewers.** When sizing new sewer pipelines, it is common practice to adopt different flow depth criteria for various pipe sizes. Design  $d/D$  ratios typically range from 0.5 to 0.92, with the lower values typically used for smaller pipes, which may experience flow peaks greater than design flow or blockages from debris, paper, or rags. The recommended  $d/D$  criteria for sizing new trunk lines are summarized in Table 2. For pipelines 10 inches and smaller in diameter, the maximum  $d/D$  value is 0.5 or 50 percent of the pipeline depth. For pipelines that are 12 inches to 18 inches in diameter, the recommended maximum  $d/D$  is 0.67. For pipelines larger than 18 inches in diameter, the maximum  $d/D$  is 0.75.

<b>Maximum d/D for Existing Sewer</b>	
All Pipes	0.90
<b>Maximum d/D for New Sewers</b>	
10 inches and Smaller	0.50
12 inches to 18 inches	0.67
Larger than 18 inches	0.75

## 1.4 Hydraulic Evaluation

A capacity analysis entails identifying areas in the sewer system where flow restrictions occur or where pipe capacity is insufficient to convey peak wet weather flows (PWWFs). Sewers that lack sufficient capacity to convey PWWFs create bottlenecks in the collection system that can potentially cause SSOs. This section discusses new hydraulic deficiencies as a result of the proposed North District project, and confirms the recommended improvement project sizing developed in the Master Plan Update.

### 1.4.1 Existing Hydraulic Evaluation

For the existing sewer collection system, the PWWF was routed through the hydraulic model along with the additional DWF from North District. The City's collection system has sufficient capacity to convey current PWWFs downstream of North District without exceeding the established flow depth criterion.

### 1.4.2 Future Hydraulic Evaluation

The analysis of the future system was performed in a manner similar to the existing system analysis. The purpose of the future system evaluation is to verify that the existing system improvements were appropriately sized to convey future PWWFs, and to identify the locations of sewers that are adequately sized to convey existing PWWFs, but cannot convey future PWWFs.

The timing of growth under build out conditions is expected to occur within the planning horizon of the Master Plan Update, which is the year 2037. As flows continue to increase in the future, there will be some areas of the existing collection system that cannot convey the build out PWWF without flows exceeding capacity. The Master Plan Update identified three sections downstream of North District as being capacity deficient under future PWWF conditions. No new deficiencies were identified downstream of North District. Figure 3 shows the locations of the future deficiencies under build out PWWF conditions as well as new trunk sewers to reach future service areas.

All future improvements are development driven and should be completed based on the timing of new development within the service area unless it reaches the end of its useful life, whichever comes first. This philosophy helps to provide pipelines that have sufficient capacity to convey flow under build out PWWF conditions. The Master Plan Update recommended three future capacity improvement projects to mitigate these deficiencies. The Master Plan Update's recommended future capacity improvements are described below.

- **Spruce Highway Crossing (Project GM-28).** This project includes the replacement of approximately 1,030 feet of 15-inch diameter pipeline along Spruce Street, from 230 feet West of Chicago Avenue to 500 feet East of Kansas Avenue. The flow levels within the gravity sewer are expected to exceed the maximum d/D criteria under build out PWWF conditions. To meet the d/D design criteria during build out PWWF conditions, it is recommended that the existing pipeline be replaced with an 18-inch/30-inch diameter pipeline.
- **Santa Anna River and Buena Vista Avenue (Project GM-31).** This project includes the replacement of an 18-inch diameter trunk at Santa Anna River Trail and Buena Vista Avenue. The flow levels within the pipeline are expected to surcharge under build out PWWF conditions. To mitigate surcharge during build out PWWF it is recommended that the existing pipeline invert be raised to divert flow through a parallel 30-inch diameter trunk sewer.
- **Parallel Santa Ana Trunk (Project GM-34).** This project includes installing approximately 9,160 feet of 39-inch diameter trunk sewer parallel to the Phoenix Trunk Sewer between the Santa Ana Trail and Jurupa/Rubidoux Junction Structure. The flow levels within the upstream Phoenix Trunk sewer are expected to surcharge, exceed maximum d/D criteria, and experience backwater effects under build out PWWF conditions. To mitigate the capacity deficiencies during build out PWWF conditions, a parallel trunk sewer is recommended.

A hydraulic evaluation was completed to confirm that the recommended capacity improvements are in accordance with the established planning criteria, new sewer pipelines were sized such that the maximum d/D does not exceed the new pipe design criteria summarized in Table 2. The hydraulic evaluation confirmed that the recommended capacity improvements are adequately sized to handle future PWWFs along with the additional flows from the proposed North District project.

However, the future capacity evaluation flagged an additional reach of pipe not previously identified in the Master Plan Update. This deficiency occurs along a 350-foot stretch of the Santa Ana Trunk Sewer upstream of project GM-34. But, this deficiency exceeds the maximum allowable d/D by only 0.23 percent and is therefore considered minor. For that reason no improvement is recommended to mitigate this deficiency.

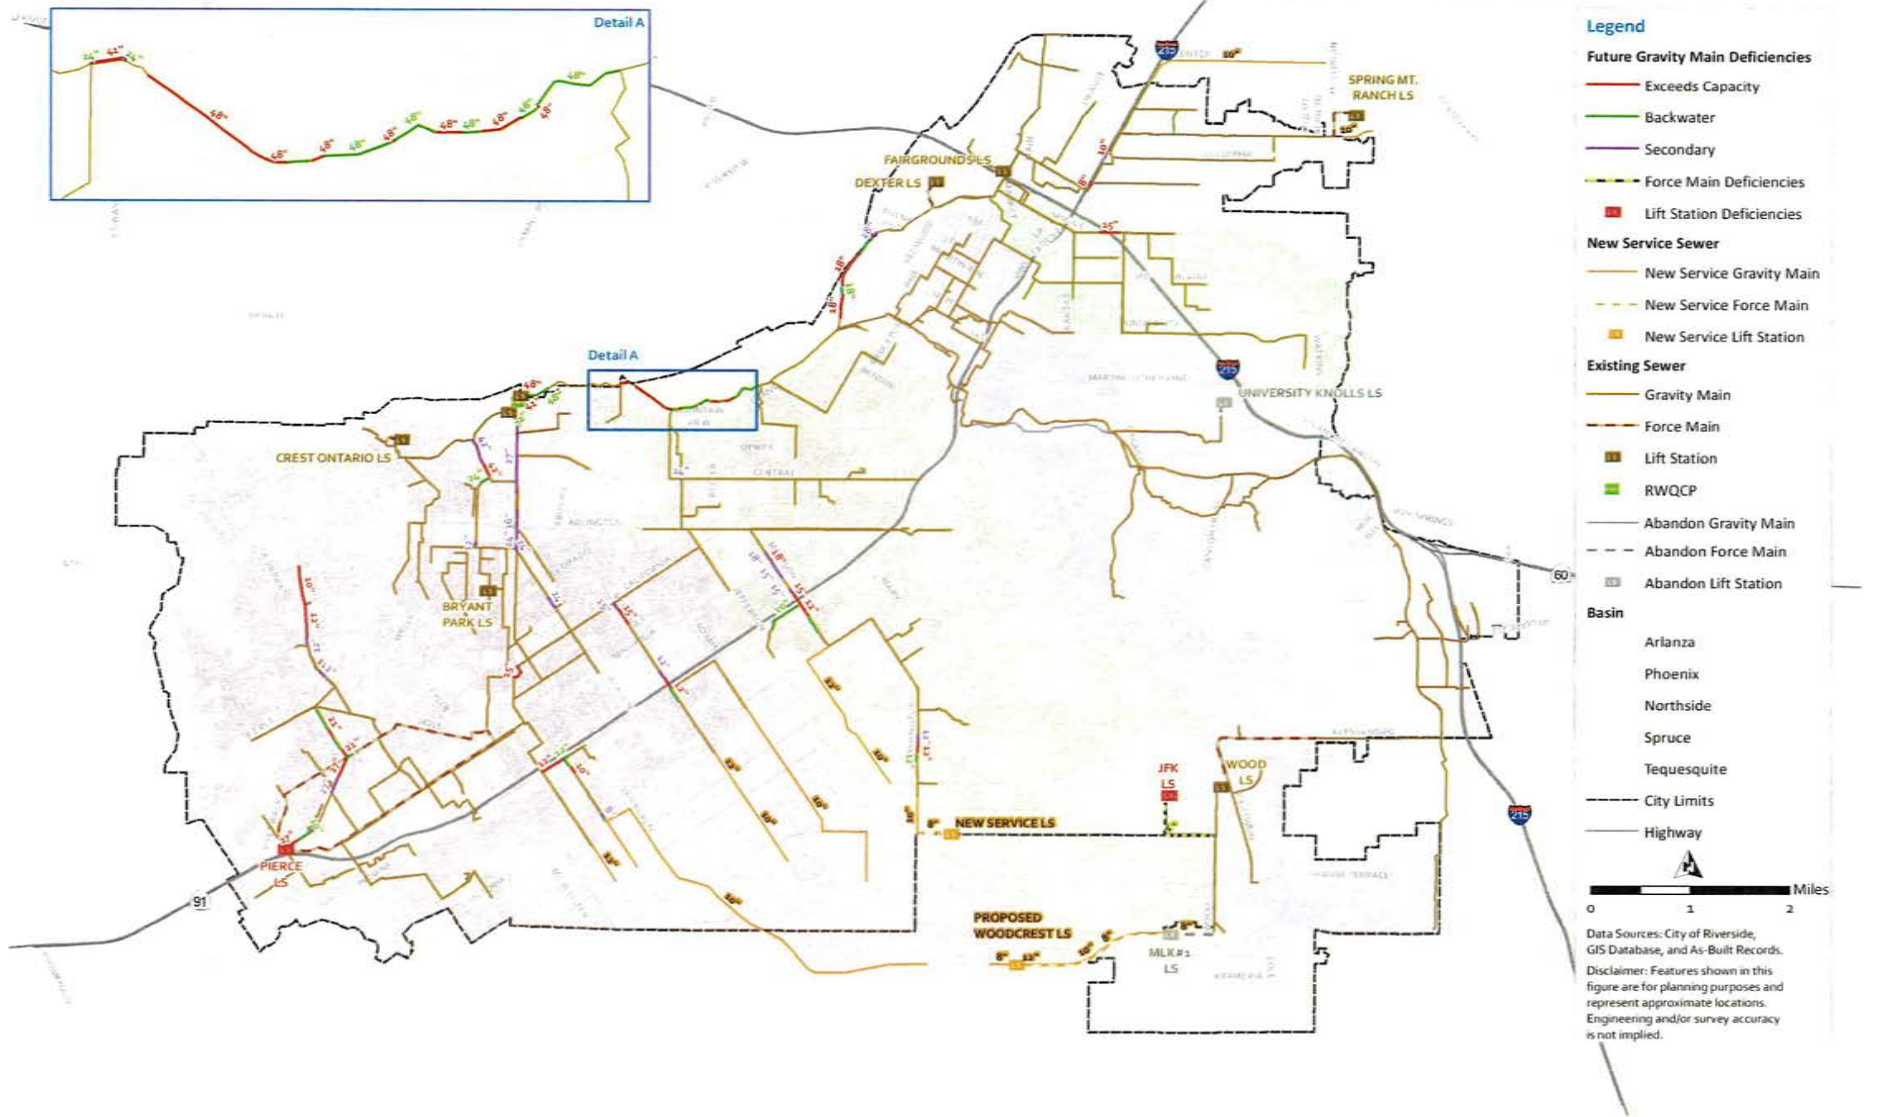

Figure 3 Future Wastewater Collection System Capacity Analysis

## 1.5 Conclusion

Based on the hydraulic evaluation presented above, the following conclusions can be made:

1. The proposed North District project will tie into an existing 8-inch diameter sewer at Linden Street and Aberdeen Drive (Canyon Crest Sewer). This sewer was added to the City's existing sewer hydraulic model as part of this analysis.
2. The proposed North District project is expected to result in a net increase of 95,050 gallons per day to the City's sewer system during dry weather conditions.
3. Peak wet weather flows (PWWF) were modeled using factors based on measured wet weather flows during storm events.
4. The model showed that the City's collection system has sufficient capacity to convey current PWWFs downstream of the North District connection point without causing impacts to the sewer system.
5. For future build out conditions in 2037, the model indicated that the proposed North District project would cause a flow deficiency in one sewer. However, the deficiency is considered minor and no improvement of the sewer in question is recommended.
6. Overall, the proposed North District project is not expected to result in any negative hydraulic impacts to the City's sewer system that will trigger an improvement project.

**Subject: Supplemental Sewer System Study for NDDP Phase 1**

### **BACKGROUND**

The North District Development Project (NDDP or Project) is a proposed development component of the University of California at Riverside (UCR) campus. The NDDP project site is generally bounded by Linden Street to the south, Canyon Crest Drive to the west, Blaine Street to the north, and Watkins Drive to the east. Phase 1 of the Project is proposed to develop new student housing buildings with up to 1,500 beds. Additional development beyond Phase 1 is not scheduled at this time.

A Sewer Capacity Evaluation was prepared by Carollo Engineers (October 2018) for the Phase 1 Project. The Evaluation used the City of Riverside's updated computer model to analyze City sewers from University Avenue and Canyon Crest Drive to the Regional Water Quality Control Plant at the west end of the City, and determined the existing sewers were sufficiently sized for City Year 2037 buildout conditions plus NDDP Phase 1 flows.

CMC has completed this supplemental Sewer System Study (SSS) which examines the smaller upstream sewers in Linden Street and Canyon Crest Drive. These sewers serve the current uses of the Project site and surrounding areas, and are proposed to serve the new NDDP Project. The regional vicinity of the NDDP and its site plan are shown in **Exhibits 1 and 2**. The NDDP site plan and proposed concept development is shown in **Exhibit 3**. NDDP Phase 1 is within Districts 1 and 2 at the south end fronting Linden Street.

### **SUMMARY**

The purpose of the supplemental SSS is to determine the impacts to three off-site sewer reaches of the existing sewer system, based on field flow testing, proposed to serve the NDDP. The off-site sewers are located in Linden Street, Canyon Crest Drive and University Avenue, as shown in **Exhibit 4**. The proposed land uses for the ultimate 51.15-acre Project site range from maximum density of 7,300 beds and 157,000 square-feet of building area to a minimum of 4,300 beds and 103,000 sf of building area, as shown in **Table 1**:

Table 1 - North District Development Project					
Segment	Land Use	Acres <sup>[2]</sup>	Quantity <sup>[1]</sup>		
			quantity	Building Area	
Phase 1 - MAXIMUM Density					
1	Student Residential 1	2.125	1,000	beds

[1] Taken from NDDP Initial Study, June 2018.					
[2] Assumes 'residential' and 'mixed-use' split the total segment acreage equally, and Segment 2 is split proportionately between 2a and 2b.					

Based on field flow monitoring, the Sewer System Study concluded that each sewer currently flows at the maximum flow characteristics under dry-weather conditions shown in **Table 2**:

**Table 2 – Sewer Flow Monitoring Results**

Sewer	Diameter	Max Flow	Max Velocity	Level	d/D ratio
Linden Street	8 in	63 gpm	2.48 fps	1.89 in	0.236
Canyon Crest Dr	8 in	96 gpm	4.24 fps	1.96 in	0.245
University Ave	18 in	661 gpm	4.23 fps	5.11 in	0.284

The peak wastewater flow contribution from the Project is estimated at 277 gpm for Phase 1, and 1,365 gpm including future NDDP development under maximum proposed density. The peak wastewater flow contribution from the Project under minimum proposed density is estimated at 190 gpm for Phase 1, and 833 gpm including future NDDP development. The Study estimates current operating peak depth ratios in the three sewers at approximately 23.6 to 28.4 percent (Table 2). It is estimated that adequate capacity is available within the 18-inch University Drive sewer for Phase 1 and buildout of the NDDP plus current dry weather flow, which confirms the findings of the October 2018 Carollo report. Estimated ultimate dry-weather flows could generate depth-to-diameter ratios within the 18-inch University Avenue sewer up to 51 percent at buildout of maximum Project density, and 43 percent at buildout of minimum Project density. Very conservative rain-dependent inflow and infiltration (RDII) assumptions at 150 percent of peak flow would increase these ratios to 65 percent and 55 percent. Depth ratios for Phase 1 would be significantly lower. These estimated depth ratios are within recommended operating standards for existing 18-inch gravity sewers.

Existing Linden Street and Canyon Crest Drive sewer capacities should be sufficient for Phase 1 NDDP flows. Under ultimate Project buildout, and depending on on-site sewer collection design, the Linden Street 8-inch sewer may require upsizing beyond Phase 1. In like manner, the 8-inch sewer in Canyon Crest Drive north of Linden Street may also require upsizing beyond Phase 1. The Canyon Crest Drive sewer south of Linden Street will require upsizing or paralleling prior to ultimate buildout of the NDDP.

CMC recommends that this study be submitted to the City of Riverside and UCR Facilities staff for their review and concurrence.

### **ANALYSIS**

The off-site trunk sewer system proposed to serve the North District Development Project (NDDP or Project) includes existing sewers in Linden Street, Canyon Crest Drive and University Avenue, as shown in Exhibit 4. The City of Riverside and UCR own separate sewer systems that are proposed to serve the NDDP project land uses. The City sanctioned a separate sewer study (Carollo, October 2018) analyzing their trunk sewer system to the Regional Water Quality Control Plant (RWQCP) approximately ten miles

downstream of the NDDP project. The Carollo study determined the existing sewers are sufficient to serve Phase 1 at the City's Year 2037 buildout.

Upstream of the system analyzed by Carollo, UCR operates an 8-inch gravity sewer in Linden Street east of Canyon Crest Drive, and the City operates the 8-inch gravity sewer in Canyon Crest Drive which conveys the Linden Street sewer flows south to University Avenue. The City also operates the 18-inch gravity sewer in University Drive. These three sewer systems were deemed potentially critical for NDDP flows. This supplemental Sewer System Study (SSS) determined available capacity in each of these existing sewer systems for the NDDP.

As part of the SSS, off-site sewer flow monitoring was performed on the sewers described above. CMC coordinated with Utilities Systems, Science and Software, Inc. (US<sup>3</sup>) to install meters at manholes in each sewer for a two-week monitoring period. The specific manholes are shown in **Exhibit 4**.

#### ***Estimated wastewater flow from the Project***

The estimated wastewater flow from the Project is based on the site plan and maximum and minimum development densities identified in the June 2018 Initial Study for the NDDP. The estimates use the Carollo sewerage flow factors and industry-standard sewerage flow factors for college dormitories and mixed-use land uses, as summarized in **Table 3** under maximum and minimum densities. It should be noted that point source flow that could be generated from the Events Center with 5,000 to 7,000 seats at sold-out events could be a critical sizing condition for the sewer system. However, the Events Center is part of 'future' planned improvements that are not scheduled at this time. The recommendations at the end of the Study include evaluating the fixture units for the proposed Events Center as soon as the design information is available.

[1] Taken from NDDP Initial Study, June 2018.

[2] Assumes 'residential' and 'mixed-use' split the total segment acreage equally.

[3] Wastewater generation for dining commons is included in the unit factor per student.

[4] Unit factors are based on October 2018 Carollo study or typical water usage in southern California for college dormitories and mixed use land uses.

[5] Sewer peaking is typically calculated using sliding scale - the larger the development, the lower the peaking factor. Sliding scale equations adopted by sewer agencies generally result in factors ranging from 1.5 to 2.5 times average flow. The peaking factor for NDDP is conservatively estimated at 3.0.

**Sewer Flow Monitoring**

Utility Systems, Science and Software (US<sup>3</sup>) performed a flow monitoring study at a manhole on each off-site sewer (Linden Street, Canyon Crest Drive, and University Avenue) in order to determine flows in each system and to determine available capacity for future development. US<sup>3</sup> determined the flow characteristics at each location shown in **Tables 4a, 4b and 4c.**

Graphs representing this data are included in the **Appendix**. The off-site sewer collection system proposed to serve the Project is shown in Exhibit 4. The UCR Facilities atlas map (5-1282) was used as the base for Exhibit 4.

The supplemental SSS focused on the peak flows and maximum depths observed at each manhole to determine the most critical reach (least amount of available capacity), and conservatively assumes

existing peak flows will occur at the same time as the proposed NDDP Phase 1 peak flows. **Tables 5a and 5b** summarize the average and peak flows (estimated at maximum and minimum development density) in each manhole and calculates the additional peak flow in each system from NDDP Phase 1.

**Table 5a – Proposed Peak Flow (MAXIMUM)**

Sewer	Existing Peak	Phase 1 Project	Proposed Ph 1 Total
Linden St	63.3 gpm	277 gpm	340 gpm
Canyon Crest Dr	95.8 gpm	277 gpm	373 gpm
University Ave	661.1 gpm	277 gpm	938 gpm

**Table 5b – Proposed Peak Flow (MINIMUM)**

Sewer	Existing Peak	Phase 1 Project	Proposed Ph 1 Total
Linden St	63.3 gpm	190 gpm	253 gpm
Canyon Crest Dr	95.8 gpm	190 gpm	286 gpm
University Ave	661.1 gpm	190 gpm	851 gpm

#### ***Linden Street 8-inch Sewer***

Flow monitoring for the Linden Street sewer showed a peak flow of 63 gpm and peak water level of 1.89 inches, for a depth ratio (d/D) of 0.236 (23.6 percent). The Manning's Equation was used to simulate this condition and determined that an effective pipe slope generating these flow characteristics is 0.01, assuming a typical roughness coefficient of 0.013 (see **Appendix**, Manning's Spreadsheet #1). Adding the estimated Phase 1 flow (at maximum and minimum density) to the existing flow (340 gpm and 253 gpm) is within the capacity of the sewer if allowed to flow at a depth ratio of approximately 58 percent, as shown in the Manning's Spreadsheet. Because this should be considered maximum allowed capacity, it is recommended that the on-site sewer system for all future phases of NDDP be designed to convey flows directly to the Canyon Crest Drive sewer. This should sufficiently account for wet weather conditions that could add 25 to 50 percent to the dry-weather flow.

#### ***Canyon Crest Drive 8-inch Sewer***

Flow monitoring for the Canyon Crest Drive sewer showed a peak flow of 96 gpm and peak water level of 1.96 inches, for a depth ratio (d/D) of 0.245 (24.5 percent). The Manning's Equation was used to simulate this condition and determined that an effective pipe slope generating these flow characteristics is 0.02 (see **Appendix**, Manning's Spreadsheet #1). Adding the estimated Phase 1 Project flow (at maximum and minimum density) to the existing flow (373 gpm and 286 gpm) is within the capacity of the sewer, as shown in the Manning's Spreadsheet. Therefore, this should be considered adequate capacity to serve Phase 1. Prior to buildout of future phases of NDDP development, paralleling or upsizing the Canyon Crest Drive sewer downstream of the confluence with the Linden Street sewer will be required. At 0.02 slope, 8-inch sewers have an approximate capacity of 700 gpm, as shown in the Manning's spreadsheet, if allowed to flow at a depth ratio of 75 percent, including wet weather conditions.

**University Avenue 18-inch Sewer**

Flow monitoring for the University Drive sewer showed a peak flow of 661 gpm and peak water level of 5.11 inches, for a depth ratio (d/D) of 0.284 (28.4 percent). The Manning's Equation was used to simulate this condition and determined that an effective pipe slope generating these flow characteristics is 0.006 (see **Appendix**, Manning's Spreadsheet #2). Adding 100 percent of the estimated ultimate Project flow (at maximum and minimum density) to the existing flow (938 gpm and 851 gpm) is within the capacity of the sewer. At 0.006 slope, 18-inch sewers have an approximate capacity of 3,300 gpm at a depth ratio of 75 percent, as shown in the Manning's spreadsheet. It should be noted that flow attenuation from the Project will reduce Project peaks by the time flow reaches the University Avenue sewer. Therefore, full peak Project flow added to existing observed flow in University Avenue is a conservative assumption.

The following is a summary of conclusions and recommendations as a result of the supplemental SSS:

1. The Linden Street sewer system has adequate capacity to serve Phase 1.
2. The Canyon Crest Drive sewer system downstream of its confluence with the Linden Street sewer system also has adequate capacity to serve Phase 1. Upon ultimate NDDP buildout, the Canyon Crest Drive sewer will require paralleling or upsizing.
3. Adequate capacity exists in the University Avenue 18-inch sewer for Phase 1 and ultimate NDDP wastewater flows.
4. At ultimate planned NDDP buildout, one of the Linden Street and Canyon Crest Drive sewer systems UPSTREAM (north and east) of the Linden Street/Canyon Crest Drive intersection will require paralleling or upsizing.
5. Fixture unit counts for the Events Center should be evaluated for potential peak flows as soon as structural/plumbing design data is available. The Events Center could be a critical wastewater generator during future phases of NDDP development.
6. Sewer flows in Canyon Crest Drive should be monitored as NDDP development proceeds beyond Phase 1.
7. Submit this study to the City of Riverside and UCR Facilities staff for their review and concurrence.

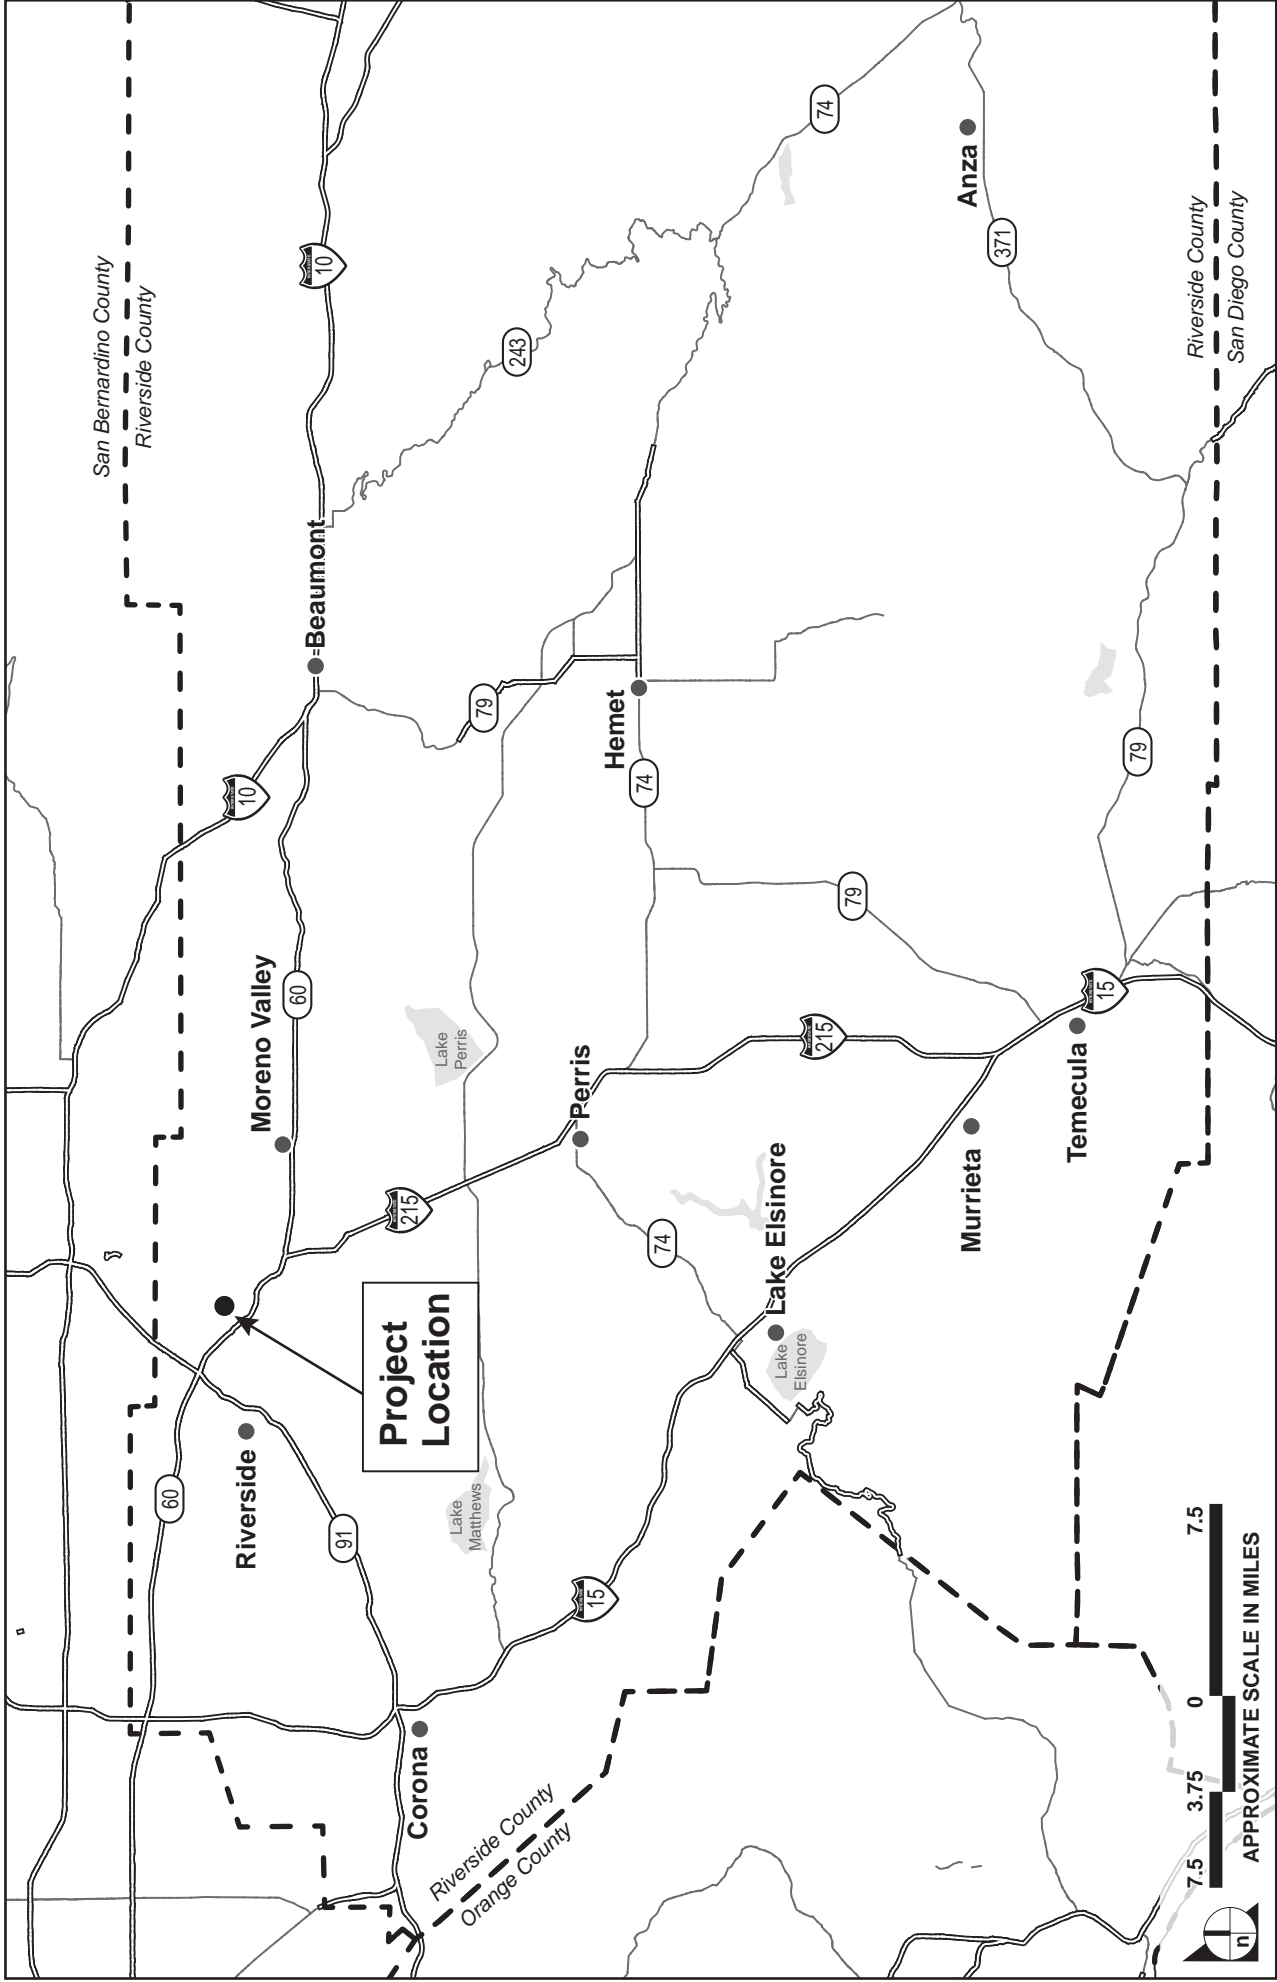

Please let me know if you have any questions regarding this analysis.

Sincerely,

Charlie Marr, P.E.

[1] Per Basic Hydraulics for Civil Engineers, Frank Jangar, 1985

Linden MH  
Canyon Crest MH

Range of flows for serving 100% of NDDP (plus existing flow) with PARALLEL 8-INCH SEWER in Canyon Crest Dr (50% of total flow).

D (in) = 1.50 ft (18-inch)
